Bill Barden on How CoCo Stacks Up

The Best Money Can Buy . . .
HDS Floppy Drive Controller Board

Features *
- Gold Plated Edge Cards
- Dual Selectable ROM Sockets
- Compatible with COCO I & II
- 120 Day Warranty
- Double and Single Density

DOUBLE SIDED

Drive 0 Complete	$199.
Drive 1 Complete	$129.
Drive 0 & 1 Dual Drive	$319.

Reduce your I/O errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best available. Our newest version controller allows the use of either (two 24 pin ROMS), or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you 100% compatibility with all Radio Shack software.

Completed and Tested Board with Radio Shack ROM . . . . . **$99.**
(Includes Case, and DOS Instructions)
Completed and Tested Board without ROM . . . **$79.**
(Includes Case)
Bare Board with Instruction manual . . . . . **$30.**
Parts Kit For Bare Board without ROM . . . . . **$30.**
Radio Shack ROM (current version) . . . . . **$20.**
Radio Shack ROM 1.0 . . . . . **$40.**

ADOS ROM (24 or 28 pin PROM) . . . . . **$40.**

ADOS is a product of SpectroSystems of Miami Florida and is fully supported by the author. The HDS version of ADOS supports 2 drives, 40 track, 6ms trk-to-trk drives only, either Single Sided or Double Sided.

TKBUG Monitor and DOS 1.0 on PROM (24 or 28) . . . . . **$40.**

New, unique CoCo software monitor in ROM designed for a minimum of key strokes and fully compatible with the 1.0 version of disk basic. Features 33 single key commands, allowing the user to quickly display and screen edit RAM in either hex or ASCII format. Also allows the user to dump screen or memory to printer, set break points, alter baud rate, set 64K RAM mode, and more. TKBUG by TOMMY KEETON.

Software Thieves (Not Pirates)!

Editor:

This letter is to all the software thieves who are passing around a broken version of *CBASIC V1.01*. It was discovered some time ago that this version of *CBASIC* was available on BBSs around the country. When I downloaded a copy, I was quite upset. I spent over two years writing this program only to find some thieves had stolen it and were freely giving away copies. What gives you the right to take two years of my work and give it away or use it without my consent? Not only have you taken something that does not belong to you, you have also given *CBASIC* a bad name. The copies you are giving away are not even near the current version (V1.12) that has a large number of additional commands, functions and improvements. Not only that, but the stolen version has many commands and features that no longer work after it was broken.

Some of you even have the nerve to demonstrate it at computer club meetings and discourage people who are considering purchasing *CBASIC*. Then there are those who have acquired the stolen version and have the nerve to call us up and ask us why something doesn't work.

Through greed or the desire to be the center of attraction in the local CoCo Community, you have succeeded in killing the best Color BASIC compiler on the market. You have also succeeded in cutting our sales of *CBASIC* by over 50 percent. We can no longer afford to run our current advertisement since we no longer sell enough copies to pay for it. I have to wonder, is it worth it to continue to improve and enhance *CBASIC* if I can't afford to pay for the advertising? It also makes me realize that it is not worth the time or effort to even attempt to work on another program as complete or complex as *CBASIC* for the Color Computer.

Bill Vergona
Cer-Comp
Las Vegas, NV

BACK TALK

Editor:

May I offer some suggestions in response to Kyle Johnson's query in the June 1986 issue [Page 8] regarding genealogy programs for a 64K Color Computer 2.

Prickly-Pear regularly advertises a *Family-Tree* program in RAINBOW magazine. Another tape program I have found to be much more complete and usable on disk is *Lineages*, prepared and sold by Ervin A. Madera, P.O. Box 1746, Rohnert Park, CA 94928-1241 for $35.

Allen R. Streeter
Saginaw, MI

Incorporating Print Styles

Editor:

In response to the question from Jerry Dummer in the June 1986 issue [Page 9], he asked how to incorporate various styles of print (which his printer will print) within *Color Scripsit*. I substitute the codes for whatever character font I want to print in place of the codes Underline and Elongate in Option 7 on the main menu.

I hope this will be of help; your magazine has certainly been a great help to me.

Lloyd O. Billings
Seattle, WA

VIP Defended

Editor:

I take respectful difference with Richard White for his statement in your May 1986 issue that *VIP Writer* might qualify as user hostile compared with other offerings. *VIP* is a powerful, elegantly programmed, and very intuitive and logical word processing package, with programmed-in and programmable printer controls that are beyond belief. The kingdom of MS-DOS should have a package as powerful and practical! Neither *WordStar* or *PC WRITE* can touch *VIP* for convenience and transparency.

I am a registered owner of *Telewriter-64* as well as *VIP*, and I have a lot of respect for it. I don't doubt that you're right, Dan (May 1986, Page 217): *Telewriter-64* is probably the most widely used word processor for the CoCo; it's a fine package and it's been around a long time. But for my big writing projects I invariably reach for *VIP*. The recent patches for *Telewriter-64* have added a lot to the original, but they give it features that *VIP* has as standard equipment.

A *VIP* users' group was recently formed. Interested persons can write me at Box 194, 01463. Hints, brief articles, letters, *VIP* database formats and CALC templates are gratefully received. There are no set dues, but contributions to defray the cost of copying and mailing the quarterly newsletter are most welcome.

John Ogasapian
Pepperell, MA

Transformation Troubles

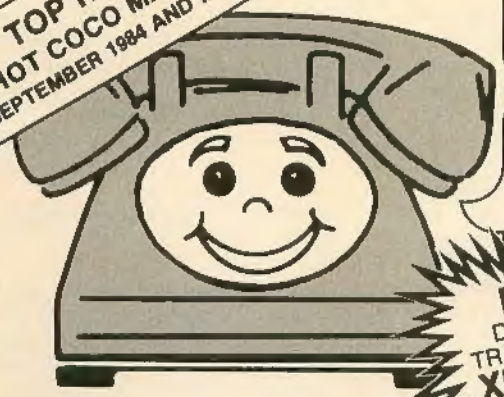
Editor:

In the June 1986 issue, Marty Goodman's article, "The Great Transformation" [Page 182] and associated programs are very good and fill a substantial need. It is indicative of the quality software available in THE RAINBOW.

One problem is the interface between *VIP Writer* and several MS-DOS word processors. *Display Writer 3* and *WordStar* are two MS-DOS word processors I have used and both insert a carriage return at the end of every line. On the other hand, *VIP Writer* inserts a carriage return only at the end of a paragraph (a forced line feed). Thus an ASCII file from *Display Writer 3* or *Word Star* used with *VIP Writer* produces a double-spaced output.

The problem becomes more serious when sending ASCII files from *VIP Writer* to *Display Writer 3* or *Word Star*. The MS-DOS software expects a carriage return after every line and without them treats the entire paragraph as one long sentence. It seems that these problems are eliminated if

TOP RATINGS
HOT COCO MAGAZINE
SEPTEMBER 1984 AND MAY 1985



YOU COULD FALL IN LOVE WITH

AUTOTERM!

IT TURNS YOUR COLOR COMPUTER INTO THE

WORLD'S SMARTEST TERMINAL

NEW DISK FILE TRANSFER VIA XMODEM

AND MOST LOVABLE

GOOD LOOKIN'

AUTOTERM shows true upper/lower case in screen widths of 32, 40, 42, 51, or 64 characters with no split words. The width of 32 has extra large letters. Scrolling is forward, backward, and fast. Block graphics pictures are displayed automatically and can be scrolled.

The screen's top line shows operating mode, unused memory size, memory on/off, and caps-lock on/off. It also gives helpful prompts.

SWEET TALKIN'

KEY-BEEP can be on/off. Unacceptable keystrokes cause a lower pitched BOP! This ERROR-BEEBOP can be on/off.

Talks to other computers with Full or Half Duplex; Baud Rate of 110, 150, 300, 600, 1200; Parity as even, odd, mark, space, none; 7 or 8 bit Word; any Stop Bits; all 128 ASCII characters; true line Break; XON/XOFF protocol; and optional line-at-a-time transmission. Able to send and receive text, block graphics, BASIC and ML programs. A 64K machine holds up to 45,000 characters (33,300 in HI-RES).

DUAL PROCESSING lets you review & edit while more data is coming in.

XMODEM for disk file transfer. Fully supports D.C. Hayes and other intelligent modems.

Talks to your printer with any page size, margins, line spacing, split word avoidance. Embed your printer's control sequences for boldface, underlining, etc. Narrow text can be automatically spread out.

You'll also use Autoterm for simple word processing and record keeping

You can display directories, delete files, transmit directly from disk, and work with files larger than memory. Easily maintain a disk copy of an entire session.

Compatible with TELEWRITER (ASCII) & other word processors.

SMOOTH WALKIN'

AUTOTERM moves smoothly and quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text, download information, file it, and sign-off; then edit the received data, print it in an attractive format, and/or save it on file.

Editing is super simple with the cursor. Find strings instantly, too! Any operating parameter, such as screen width, can be altered at any time. Uncompleted commands can be cancelled.

PUTTY IN YOUR HANDS

The word processor can be used to create, print, and/or save on file your personal KSMs. They let AUTOTERM act like you. For example, it can dial through your modem, sign-on, interact, perform file operations, & sign-off; an entire session without your help. KSMs can answer the *phone*, prompt the caller, take messages, save them, hang-up, and wait for the next call. The KSM potential is unbelievable!

NO OTHER COMPUTER IN THE WORLD CAN MATCH YOUR COCO'S AUTOMATIC TERMINAL CAPABILITIES!!!

WHAT THE REVIEWERS SAY

"AUTOTERM is the Best of Class."
Graham, *RAINBOW*, 6/83

"The AUTOTERM buffer system is the most sophisticated — and one of the easiest to use..."
Banta, *HOT CoCo*, 9/84

"Almost a full featured word processor..."
Ellers, *RAINBOW*, 11/84

"AUTOTERM's excellent error-handling routines, thorough documentation, and logical, easy-to-use command structure make it stand out."
Parker, *HOT CoCo*, 5/85

Please hire the mentally retarded. They are sincere, hard working and appreciative. *Thanks!* *Phyllis.*

Telewriter-64 is used since it inserts carriage returns at the end of each line.

If anyone has a simple solution to this problem, I'm sure it would be appreciated by the many *VIP Writer* users.

Ronald Pettus
St. Charles, MO

Assessing the Assessment

Editor:

I must take exception to the article by Harry Hallstrom entitled "Assessing the Market Value of Your Home," April 1986 [Page 79]. While Mr. Hallstrom's program seems well-written and well-intentioned, it *does not* assess the fair market value. I can understand his bewilderment after talking with three real estate agents who were obviously lacking in training. Without facts to back up their "market value," it is no wonder they came up with a $20,000 range.

On the other hand, Mr. Hallstrom's method neglects changes in the buying market, availability and type of financing, changes in the neighborhood, conformity within the neighborhood, condition, area amenities and more. In addition, improvements rarely increase the value as much as they cost.

Your readers would be best advised to base their asking price on information from comparable sales and competitive properties. If you live in a small town with no multiple listing service and only local real estate companies, go ahead and order a FNMA appraisal. The cost of the appraisal is small when compared to the frustration of an extended marketing time and false expectations.

Roger A. Knauff
Montgomery, AL

HINTS AND TIPS

Editor:

Users of "Name That Tune" (June 1986, Page 66) will experience problems with the firebuttons regardless of the computer they use. PEEK(65280) gives a number in the 100s or 200s depending on JOYSTK(0). To correct this problem, make the following changes in the program:

```
5100 P=PEEK(65280) AND 3
```

In lines 5110, 5120 and 5135, substitute 2 for 254 and 1 for 253.

Bruce Lewis
Maryville, MO

The substitution will work — and it will work on both CoCos regardless of what set of numbers your firebuttons produce. However, it also involves one more function to be performed (computing the logical AND on P) in a spot where there is really no time to spare. Hence, the joysticks become a little less sensitive and the music moves a little slower.

Marge Rutter
Program Author

Ring Quest Reincarnation

Editor:

I enjoy your magazine and the Second Adventures tape and would like to pass along a hint for the Adventures tape. In *Ring Quest*, to make it so you cannot die, make 340 GOTO 354. This reincarnates you with a loss of hit points totaling the number the monster killed you with, but at least you get to finish the game. This is great for searching rooms.

Mike Farmer
Ellensburg, WA

REQUEST HOTLINE

Editor:

I own a grain crop farming operation and would like to know what companies have farming business software available for the CoCo. Write me at RR 1, Box 301A, 46176.

Scott Newkirk
Shelbyville, IN

And the Beat Goes On

Editor:

I am looking for a program to allow the CoCo to perform as a metronome. I run a recording studio in Nashville and would like to use it for my studio work. Can anyone help me? My address is 300 Rural Hill Ct., 37217.

Michael Bridges
Nashville, TN

Mailing List Merger

Editor:

Is there any way to merge a mailing list created by a BASIC program to *Telewriter-64*? My address is 133-01 Sanford Avenue, 11355.

Tho Luong
Flushing, NY

Data Sheet Dearth

Editor:

I would like to know if anyone knows where I can obtain the 1793 FDC data sheet (Floppy Disk Controller) by Western Digital Corporation. I need an address and telephone number please. Write to me at 834 Third Street, G8P 1P6.

Claude Gosselin
Chibougamau, Quebec

Domestic Requests

Editor:

Kudos to Scott Halfman for his *Castle of Doom* program (June 1986 issue, Page 26). This is by far one of the best BASIC game programs for the CoCo I have ever seen.

I need help finding a couple of programs. First, I am looking for a program to help my wife lay out cross stitch patterns on all sizes of material. Second, I am looking for a program that will teach shorthand. Any help would be appreciated. I can be reached at RR 2, Box 85-A, 47882.

Scott Lampton
Sullivan, IN

Brother, Can You Spare a Program?

Editor:

I am secretary of a bowling league and need a program that will enable me to keep up-to-date records of individual averages, etc. Does anyone know of one? Write to me at 195 Lynnfield Street, 01960.

John C. Groz
Peabody, MA

Knitting Calculations Needed

Editor:

My wife has a knitting machine and I have a 64K Color Computer, Radio Shack disk drive and a printer. I would appreciate any information on programs available concerning knitting machine calculations. Any information can be sent to me at 2341 Floyd Drive, 53404.

James E. Johnson
Racine, WI

See the Sugar Software ad on Page 80 in the May 1986 issue. They have a program called CoCo Knitter. *It was also reviewed in the same issue (Page 195).*

Diet Diagnostic

Editor:

Do you know of a nutrition and disease program for the Color Computer 64K for use with organic diseases, diet, vitamins, symptoms, dates, hours, etc. My address is 4617 Girard Avenue No., 55412.

Wilma Bisted
Minneapolis, MN

The October 1985 issue, Page 213, has a review of a program by Homesoft called Nutriguide. *This may be what you are looking for.*

Rabbit Relations

Editor:

I was recently approached by several friends who are involved with rabbit breeding. We are looking for a program to compile information on rabbits for ease of record-keeping. It would be similar to a genealogy program. Has anyone seen or heard of such a program? I would appreciate hearing from anyone on this subject. I can be reached at P.O. Box 775, 70664-0775.

Morgan J. Maynard
Sulphur, LA

DELPHI LINE

Editor:

OS-9, to me, means incompatability with all of my files that are in Extended Disk BASIC format. What would I need OS-9 for? Everything I ever use is in the normal format. Why are there only hard drive drivers for OS-9? It would be a great idea to use a hard drive in place of a floppy! Then I would have faster data I/O and lots more space.

I could put *CoCo Max II* and *VIP Writer*

on it, etc. I know this would be possible if I could get a software driver that would drive a hard drive from Disk BASIC just like a floppy but with the plusses of a hard drive. More people would use hard drives because they wouldn't have to learn another operating system and wouldn't have incompatability with their existing programs. Does anyone know where I can get a hard drive driver for Extended Disk BASIC? If so, please write to me at 125 Kelmar Avenue, 19355.

Ted Matthews
Frazer, PA

You might check our advertisers such as Owl-Ware.

INFORMATION PLEASE

Editor:

Does anyone have a device driver and a device descriptor for using the Radio Shack X-pad under OS-9, or a program to use and define the four special function keys on most CoCo replacement keyboards for use under OS-9, or an OS-9 sound program, or an OS-9 key click program? My address is P.O. Box 506, 83221.

Robert Parsons
Blackfoot, ID

Game Quest

Editor:

I am looking for a jet combat simulator for the TRS-80. There are two available for the Commodore 64 right now.

Also, I would like to know where I could get the game *P-51*. My address is 3447 Dempsey Road, 43081.

Kevin Burton
Westerville, OH

You can purchase the game from Tom Mix Software.

In Search of Rainboard

Editor:

Can you please tell me in which issues of RAINBOW the "Rainboard BBS" appeared. I also want to thank all the people who make THE RAINBOW what it is.

Nick Barnes
Waterbury, CT

"Rainboard" by Lane Lester appeared on Page 44 of the November 1984 issue. Also see "Supreme SysOp and Magnificent Modem Master" on Page 20 of the November 1983 issue.

Speechless

Editor:

I have purchased the *Super Voice Cartridge* along with the *Translator* from Speech Systems. After reading instructions and running sample programs it works fine, but when I try it with other programs that ask if I have a speech cartridge and I say yes, it doesn't work. I have tried it with several Radio Shack programs and on *Gold Runner* from Tom Mix and it won't work with any of these programs. I would like to know if there is a program or a way to get the *Super Voice Cartridge* to work with these programs. If anyone can help, please write me at P.O. Box 8522 LRS, 77711.

Thank you for Delphi, it is:

D elightful

H elpful
I nspiring

Gene Darby
Lumberton, TX

The other programs you are using are designed for the Radio Shack Speech/Sound Cartridge.

CoCo Confusion

Editor:

I have a 64K CoCo. I received my May 1986 RAINBOW and looked through it. In the "Received & Certified" column I saw the Infocom games. I noticed it said the games were for the CoCo 2. I know that the CoCo 2's POKE locations are different. Can I use it on my CoCo? If not, are they going to come out with one for the CoCo 1?

Ryan Smith
Placerville, CA

The Infocom routines require the DOS command to boot. They have, however, loaded on our older CoCos when we used the OS-9 boot routine to run them.

Take It All Off?

Editor:

Is it OK to turn off all the computer equipment at the power strip, or should I continue to turn off everything individually?

RAINBOWfest at Palo Alto was great. Not only were there great bargains at the booths, the seminars we attended were good — especially the Steve Bjork seminar. We also attended Dale Puckett's OS-9 seminar and bought his book. Keep up the good work, and please come back out our way soon.

Sonya J. Hurst
Richmond, CA

Although it is not recommended by Radio Shack, it has worked without detriment to the equipment.

Documentation Dilemma

Editor:

I recently purchased a Centronics Model 308 printer for $50. I knew it was used when I got it and expected it would not be in good shape, but I was wrong. The problem is I have no documentation on it. If anyone has documentation please send me a copy of it or tell me where I could get it. My address is P.O. Box 56, 67103.

Brian Daily
Mayfield, KS

Packet BBS

Editor:

Have any radio amateurs found or constructed a packet bulletin board program or message recorder/transmittal program for the CoCo in conjunction with two-meter packet radio? I have experimented with the *Autoterm* program (building keystroke multipliers section), but the AEA PK=80 packet controller will not access these commands when a station calls my station. Any suggestions would be appreciated. My address is 19 New York Avenue, 08735.

Harry Warren W2SAD
Lavallette, NJ

BOUQUETS

Editor:

I was pleasantly surprised to receive a software update disk from one of your advertisers, Micro Works. I had purchased the DS69A Digitizer and C-See software, and had found it to be a good product. Apparently Micro Works found a bug, and without any complaint from me, sent a new version of their software. Your readers should know that they are concerned for their customers.

Terry A. Jackson
Lombard, IL

Editor:

I would like to publicly thank the people at Frank Hogg Laboratory for the courteous and prompt service I received. I recently ordered some merchandise and am very pleased. The person who took my order explained what each piece would need to work properly on my system and answered all my questions. Half of the order arrived in two days. One piece had to be back ordered and it came in just four days. All of this, plus fair prices, make FHL a company for the CoCo Community.

Jim Martin
Indianapolis, IN

Editor:

I enjoy getting THE RAINBOW and the main reason is because of your great range of advertisements and great departments, like "CoCo Gallery." It was in THE RAINBOW that I came across Dayton Associates; they have given me good, fast service and I haven't had a problem yet.

Mike Jovanovic
Chicago, IL

Editor:

I would like to thank Bob Rosen of Spectrum Projects for his assistance in getting my Mark Data Products Universal Video Driver to work. I contacted Bob Rosen and explained my problem. He immediately resolved it.

Bill Stephan
Massapequa, NY

The Ultimate Color Computer

Enhancements for Productivity from HJL Products

To achieve maximum productivity with your Color Computer, you have to make it as easy as possible to get information into and out of the system.

This is why we developed the HJL family of high-performance enhancements for ALL MODELS of the Color Computer.

The Keyboard - $79.95
The overwhelming favorite of serious Color Computer users worldwide, the HJL-57 keyboard has the smooth, consistent feel and reliability you need for maximum speed with minimum input errors. Includes 4 Function Keys and sample function key program. Installs in just a few minutes with no soldering.

The Numeric Keypad - $89.95
The NumberJack is a self-contained, cable-connected keypad for heavy-duty number-crunchers. Besides the number keys, it has all the cursors, symbols and math keys, including autoshifted (one-touch) ADD and MULTIPLY. Comes complete with 3-foot cable and all necessary connectors for quick and easy installation without soldering.

The Monitor Adapter - $25.95
This universal driver works with all monochrome monitors, and is easily installed without clips, jumpers or soldering (except in some later CoCo 2s with soldered-in video chips). Here's crisp, clear, flicker-free monitor output with all the reliability you've come to expect from HJL Products.

The Monitor - $89.95
The GoldStar high-resolution amber monitor brings you the monochrome display that's preferred by most computer professionals today. Once you've used it you'll never connect your computer to a TV set again. The 12-inch diagonal CRT has an etched non-glare faceplate. (Requires adapter sold below)

The BASIC Utility - $25.95
Quick Basic Plus, a high-performance programming utility, can be used with any color computer that has four function keys. 26 pre-defined BASIC statements, 10 user-defined macros at a time (you can save as many sets of macros as you like), automatic line-numbering, word wrap, global search, and instant screen dump to printer, make this software the BASIC programmer's dream come true. Comes with re-legendable 3-way reference chart. Specify disk or cassette.

The HJL Warranty
Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

Pick a Pair & Save 15%
Now, for a limited time, we'll give you 15% off the price of any two or more products shown here. Just mention this ad when you order.

Rochester, New York 14624

Ordering Information: Specify model (Original, F-version, or CoCo 2 Model Number). Payment by C.O.D., check, MasterCard, or Visa. Credit card customers include complete card number and expiration date. Add $2.00 for shipping, 3.50 to Canada; except monitors (call for shipping charges before ordering monitors). New York state residents add 7% sales tax. **Dealer inquiries invited**

my work published in "CoCo Gallery." I consider THE RAINBOW to be the finest computer magazine published today. Your interesting and intelligently edited magazine has had a lot to do with the success of our beloved CoCo.

Merwyn Bly
Vienna, VA

Missing Address

Editor:

A gentleman phoned me with a question about my *IRA Estimator* (April 1986, Page 70). I promised to send him a cassette to compare with his typed-in listing, but I lost his name and address. He is from either Maryland or Virginia. Please send me your address again. Your tape is ready.

Bruce W. Ronald
Dayton, OH

How about a 'Wishing Well'

Editor:

I would like to see in RAINBOW a section entitled "Programs I Wish Somebody Would Write." Readers could write in about a program of their particular interest that might be of interest to many others with the same need. I personally have use for more business and science software rather than games. It would be great if someone could write a program for CoCo on linear programming or a graphics break-even analysis program. I would purchase these kinds of programs, but nowhere are they written for the Color Computer.

Ron F. Pfeiffer
Cuyahoga Falls, OH

Where have you been? Fred B. Scerbo, a contributing editor, has been writing the "Wishing Well" column since March 1984. He is receptive to all readers' requests and ideas — you should drop him a line.

BULLETIN BOARD SYSTEMS

Editor:

The Pub BBS of Chandler has moved to Mesa and has a new telephone number: (602) 844-7840. The system is running 24 hours a day under OS-9 with PBBS 4.0 software using a 64K CoCo with multipack, 80-column card, hardware clock and three 80-track, double-sided drives. We support 300 and 1200 Baud. No password is required. There are six download subdirectories for text, OS-9, Model 100, CoCo and graphics. The Pub has been running for nearly two years. Please stop by and see us sometime.

Steve Roberson
Mesa, AZ

• I would like to announce the new L.A. Color Users Board BBS system. It is running the Colorama software at 300 Baud and has five download sections, magazine, gallery, message base and much more. We are up 24 hours a day. The number is (213) 773-3024. To be guaranteed full access after the first call, send a post card to 4740 E. Florence, #1, 90201.

Bill Gordon
Bell, CA

• I am pleased to announce that the Star Trek BBS is online 24 hours a day, seven days a week. This system runs on a CoCo 2 with two DSDD (disk) drives. The board has online games, downloading (XMODEM), chat with Capt. Kirk and more. Phone (203) 822-8176.

Bruce Bouley
Norwick, CT

• I have a 64K CoCo 2 with one disk drive, printer and 300 Baud modem. My number is (315) 549-2501 or if anyone knows of a BBS in my area please call or write. My address is 5418 Rt. 89, 14541.

Drew Hammond
Romulus, NY

• For the benefit of the CoCo Community, I have listed some local BBSs in the Yonkers and Bronxville area that support the Color Computer:

Westchester #1, 300-1200 Baud, 24 hours a day, seven days a week, TBBS system. Phone (914) 965-2355, Bill Graspo, SysOp.

Lexicon BBS (formerly WCHR BBS), 300-2400 Baud, 24 hours a day, seven days a week, TBBS system. Phone (914) 776-2424.

System 80, 300-1200 Baud, 24 hours a day, seven days a week. Phone (914) 793-5408, Steve Brundale, SysOp.

Capraselli, 300-1200 Baud, 24 hours a day, seven days a week, TBBS system. Phone (914) 699-8186.

M&M Public BBS, 300-1200 Baud, 24 hours a day, seven days a week, TBBS system. Phone (914) 738-6857.

TBBS of Yonkers (formerly the Undersea Kingdom of Golden Bridges), 300-1200 Baud, 24 hours a day, seven days a week, TBBS system. Phone (914) 964-8845, Mike Sebar, SysOp.

I hope this encourages more CoCo nuts to participate in the growing world of telecommunications!

S.A. Borbas
Yonkers, NY

• The Peninsula CoCo Board, which has been online since May 1984, now supports up/downloads, mail section, public messages, a D&D section, private messages and SIGs for Commodore, Atari, CoCo, Apple and MS-DOS machines. The BBS is operated on a 64K CoCo with 1.8 megs of online storage program in CoBBS and supports 300 or 1200 Baud. Parameters are 8, 1 & N only. Phone (804) 868-0922. Passwords are usually approved within 24 hours. Security is strict and only public domain programs are allowed. Runs 24 hours daily, seven days a week, except when SysOp is playing.

Bill Satterwhite
Tabb, VA

• I would like to announce the formation of CoCo Beach. It runs on a Colorama BBS system with multilevel access, online games and more. Call (206) 432-2512. Jeff Gill, SysOp.

Brian Wright
Seattle, WA

LATE NIGHT RATES ON DELPHI

If all goes as planned, by the time you read this, Delphi will have instituted summer Late Night Rates!

The way it works is that, during the late night/early morning hours, users will receive one free minute for every 10 minutes used, amounting to a 10% discount

The Late Night Rates are to be in effect during July and August and apply to connect time between 2 a.m. system time (Eastern Daylight Time) and 7 a.m. local node time (the time at your end). For Eastern U.S. users this is a five-hour period but for those on Pacific Time, this is an eight-hour period since Late Night Rates apply from 2 a.m. *system* time to 7 a.m. *local* time.

An added bonus to Late Night Rates is that many of THE RAINBOW authors and editors choose to be on our CoCo SIG during this period anyway!

THE RAINBOW welcomes letters to the editors. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or space.

Letters to the editors may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS. Be sure to include your complete name and address.

ARTS AND LETTERS

Sonya and Ken Hurst
Richmond, CA

A Down Home Invitation

Our Anniversary Issue is history now and we've already received more notes, letters and cards about it than anything we've done in a long time. As things work through the editorial department, we'll print a representative number of your comments in our letters column.

Just about everyone had nice things to say, and all I can say is "thank you!" We're glad you consider THE RAINBOW to be "your" magazine just as you consider the CoCo to be "your" computer. It makes it a whole lot more fun to be a part of the CoCo Community when you know everyone is so positive about it.

Maybe the special section on the people who do THE RAINBOW whetted a few appetites, or maybe it is just because summer is coming and it's time to "hit the road" for vacation. Whatever the reason, we're getting a whole lot of requests for tours of the Falsoft Building for this summer.

If you've already written to us about that, you know who to contact. But if you happen to be near Prospect and would like to stop by, you can arrange for a tour by writing or calling Ira Barsky, who is in charge of our development program. Call or write Ira at our regular address and, if at all possible, we'll be happy to have you. I'm sorry, but we can only do this Monday through Friday during regular office hours (9 a.m. - 5 p.m.).

* * *

Speaking of Ira, our newest employee, reminds me to talk about RAINBOWfest, which is also under his aegis.

The Chicago show this year was a resounding success, but proved to me that I should let well enough alone.

One of the biggest complaints we've always heard about RAINBOWfest is that the aisles are too small and there is not enough room to walk around easily. In Chicago this year we took some extra space to make the aisles wider. And what happened? The main response I got was that "the show seems smaller than last year."

Actually, the Chicago RAINBOWfest had a slight increase in attendance from last year (and were there some bargains to be had!), but it *did* seem smaller because there was so much extra room.

Don't expect that to happen again. After telling several hundred people that the show was running the same, attendance-wise, I decided that we'll forgo the bigger aisles from now on.

The California show, right now, is in doubt.

The California show has always been our smallest — at least 2,000 less than the other two — and has always been the most expensive to produce. Part of that is because of the great distance we have to travel, but the other aspect is that hotels in the California area (northern *and* southern) charge far more for use of their facilities than anywhere else in the country.

We have not made a final decision yet and hate not to go to the West Coast, but we believe we might be forced into dropping this one show because of a combination of cost and attendance.

We are trying to find a way to cut costs and boost attendance in California but we are not sure if those efforts will be successful. If not, be certain that the shows in Princeton and Chicago will be held as planned.

* * *

My August column is traditionally a pretty short one — I usually get "written out" for the July anniversary issue. But I did want to keep you up to date on what's going on here and will close by saying I hope we'll see you in Prospect this summer!

— Lonnie Falk

"We're glad you consider THE RAINBOW to be 'your' magazine just as you consider the CoCo to be 'your' computer. It makes it a whole lot more fun to be a part of the CoCo Community when you know everyone is so positive about it."

And, we anticipate there will be another major change for RAINBOWfest next year — two shows rather than three. We will be in Princeton, New Jersey, and Chicago, but the future of

AVAILABLE NOW

DRAGON USER

To make the most of your new Dragon microcomputer from Dragon-Tano, you need *Dragon User* — the international, independent magazine for Dragon owners.

Each issue of *Dragon User* contains:
- reviews of the latest software
- programming advice for beginners
- hardware projects
- program listings covering games and utilities
- reviews of Dragon peripherals and add-ons
- technical advisory service
- programming articles for users

The Dragon microcomputer was launched in the UK last year. Since then we have developed a knowledge and mastery of the machine's abilities. You can benefit from our experience by subscribing to *Dragon User*, which is expanding its coverage to include all US developments.

To make sure that you receive a copy of *Dragon User* regularly, subscribe direct to us. This costs only $29.95 for 12 issues airspeeded to you — or take advantage of our special offer to long term subscribers. Individual copies of the magazine can be obtained from your Dragon dealer.

NEW

OWL-WARE
WINCHESTER BASIC

ANNOUNCING... the Development of a Major Breakthrough in HARD DRIVE SYSTEMS for the COLOR COMPUTER!!!

Several months ago OWL-WARE introduced the Finest OS9 Hard Drive System for the Color Computer. Now we are about to introduce the only RSDOS interface System worthy of our computer, OWL-WARE Winchester Basic. For the first time you have available a true Winchester System, although there are 10 directories made available to BASIC, the only limit to size of any file is the size of your drive. On a 10 meg drive you could have a 8 meg file on directory 5 and a 1 meg file on directory 8 and small files everywhere. You turn the computer on and you can immediately access your drive from BASIC or any language using commands you already know. You do not have to know or use OS9 to use OWL-WARE WINCHESTER BASIC, but if you do, all files saved from RSDOS are available to OS9. All files generated from OS9 can be made available to RSDOS by copying to the WINCHESTER BASIC directories. There are no partitions to wall you into, only one operating system, but nothing forces you to use an operating system you don't like.

Call for further details and availability on this breakthrough product!!!

That plastic look . . .
A doctor in the house . . .
And, assorted CoCo commentary

A grab bag of sorts. Yes, the cover of last month's anniversary issue "feels funny," or, as one reader says, "appears to be waterproof." Well, it was *laminated*; that is, a "photopolymer," a thin plastic coating that dries upon exposure to ultraviolet light, was added to give it a spiffier look. We figured, with our mugs on the cover, we could use all the help we could get.

Perhaps "water resistant" would be more appropriate than "waterproof," to borrow terms more associated with watches and raincoats than magazines. Laminating a cover is much like waxing your car: it brings out the color to make it look prettier and it helps protect the surface, too. For instance, if you use a Magic Marker to draw mustaches on our caricatures, you can wipe them right off again. At any rate, the lamination process was an extra feature of our anniversary issue and, because it is quite expensive, it'll likely be a while before we do it again. We hope you liked it.

Something brand new this month is "CoCo Consultations," a technical Q&A column by Martin H. Goodman, M.D. Marty is a hard-core hacker if ever there was one and, I believe, his knowledge of the CoCo and its associated hardware and software is unexcelled. Our challenge here at THE RAINBOW will be to keep Marty's voluminous replies in "CoCo Consultations" from spilling over into the next dozen pages.

An added extra for RAINBOW readers is that Marty can be reached almost every evening on our CoCo SIG on Delphi. Thus, you can receive quick replies to your questions, even though, due to our "lead time," it may be months before your question is published in his (or Dan Downard's) column.

I was recently treated to several hundred words of "clarification" from Marty in response to a few dozen words in a letter to the editor in July's issue. It appears one of our readers was somewhat overzealous in his comparison of the CoCo, the Amiga, the Macintosh and the Atari 520ST.

No, the CoCo's Motorola MC6809E, most certainly, *is not* a 16-bit CPU, as was claimed, but rather an eight-bit device, albeit with 16-bit internal registers. Secondly, while 512K add-ons are available for the CoCo, only 64K is directly addressable. There were some other inaccuracies, too, but, for Marty's full response, you'll need to check our CoCo SIG database.

Professor Art Flexser was one of the first to chide us for not contesting the letter when we ran it, an editorial oversight. We've also received letters from several others, including George Henry of Glendale Heights, Illinois; Lake Smith of Mt. Juliet, Tennessee; Troy Rothwell of Battle Creek, Michigan; and Alan Blount of Grand Junction, Colorado. The sum and crux of everyone's remarks is that, yes, the CoCo is a wonderful machine, but let's keep the facts straight.

Toward that end, we asked Bill Barden to do a piece on "How Does the CoCo Stack Up?" Bill is a recognized authority on personal computers and his commentary begins on Page 90. Perhaps this will make up for letting that July letter slip through.

And, what else is new? Well, RAINBOW's technical editor, Dan Downard, is about ready for us to introduce the long-awaited RAINBOW ON DISK service, which will include OS-9 programs, too. Stay tuned.

Lastly, we'll soon be mailing THE RAINBOW in Kraft paper — the infamous plain brown wrapper — in order to provide extra protection during mailing. So, if you've been putting off subscribing because you don't like the label being stuck on the cover, now's your chance to join the ranks of those who save money, and time, by signing up for home delivery. For this month, that's "a wrap" for me, too.

— Jim Reed

500 POKEs, PEEKs, 'N EXECs

FOR THE TRS-80 COCO

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you 'GET UNDERNEATH THE COVER' of the Color Computer and develop your own HI-QUALITY Basic and ML programs. SO WHY WAIT??
This 80-page book includes POKEs, PEEKs and EXECs to:

- ★ Autostart your basic programs
- ★ Disable Color Basic/ECB/Disk Basic commands like LIST, LLIST, POKE, EXEC, CSAVE(M), DEL, EDIT, TRON, TROFF, PCLEAR, DLOAD, RENUM, PRINT USING, DIR, KILL, SAVE, LOAD, MERGE, RENAME, DSKINI, BACKUP, DSKI$, and DSKO$.
- ★ Disable BREAK KEY, CLEAR KEY and RESET BUTTON.
- ★ Generate a Repeat-key.
- ★ Transfer ROMPAKS to tape (For 64K only).
- ★ Speed Up your programs.
- ★ Reset, MOTOR ON/OFF from keyboard.
- ★ Recover Basic programs lost by NEW.
- ★ Set 23 different GRAPHIC/SEMIGRAPHIC modes
- ★ Merge two Basic programs.
- ★ AND MUCH MUCH MORE!!!

COMMANDS COMPATIBLE WITH 16K/32K/64K/COLOR BASIC/ECB/DISK BASIC SYSTEMS and CoCo I and CoCo II.

ONLY $16.95

ORDER TODAY! VISA, MC, Am Ex, Check or MO. COD add $2.50. Please add $3.00 S & H. USA & Canada, foreign add $5.00. NYS residents p add sales tax. All orders shipped WITHIN 24 HOURS!

MICROCOM SOFTWARE

Phone (716) 223-1477

UTILITIES/BOOKS

UTILITY ROUTINES for the TANDY & TRS-80 COCO (Vol 1)

This powerful book for Basic and ML Programmers, includes program explanation, memory requirements and an annotated source listing for the utility routines given below. These routines if bought individually will cost you HUNDREDS OF DOLLARS.

These are 100% Position Independent ML Utilities and require no ML programming knowledge.

COMMAND KEYS: Access commands with 2 keystrokes.
CURSOR STYLES: Over 65000 cursor styles.
ERROR SKIP: 'ONERR GOTO' for Basic Programs.
FULL LENGTH ERRORS: Get real word error messages.
KEY CLICKER: Ensure key input accuracy
REPEAT KEY: Repeat ANY key
REVERSE VIDEO (Green & Red) Eliminate eye-strain.
SPOOLER: Don't wait for those long printouts.
SUPER SCROLLER: Save/view scrolled lines.
TAPE-TO-DISK: Copy Basic and ML programs.
AND MUCH MUCH MORE!!!

For 16K/32K/64K Cassette or Disk Systems, CoCo I & CoCo II.

BOOK $19.95

THESE ROUTINES (READY-TO-RUN) ON CAS/DISK:

$24.95

BOTH BOOK AND CASSETTE or D.SK.

$36.95

OTHER "MUST" BOOKS

UNRAVELLED SERIES: These 3 books provide a complete annotated listing of the BASIC/ECB and DISK ROMs.

COLOR BASIC UNRAVELLED: $19.95
EXTENDED BASIC UNRAVELLED: $19.95
DISK BASIC UNRAVELLED: $19.95
ALL 3 UNRAVELLED BOOKS: $49.95
RAINBOW GUIDE TO OS-9 (Book) $18.95
RAINBOW GUIDE TO OS-9 (2 Disks) $29.00
BASIC PROGRAMMING TRICKS: Tips and tricks for Basic Programmers. Only $14.95

WE HAVE ALL THAT YOU NEED TO SUCCEED

SUPER TAPE/DISK TRANSFER

- Disk-to-Disk Copy (1 – 3 passes)
- Tape-to-Disk Copy
- Tape-to-Disk Automatic Relocate
- Disk-to-Tape Copy
- Tape-to-Tape Copy

Copies Basic/ML programs and DATA files.
32K Disk System
(Disk to Disk Copy requires 64K)

DISK ONLY **$24.95**

BEST OF COCO TIME '85

(UTILITIES)

18 best selected utilities from COCO-TIME 1985 like:

- In Memory Disk Drive for 64K Cassette Users
- CoCo Disk Zap
- Basic Program Packer
- Tape Encryption (Basic)
- Disk Encryption (Basic)
- Graphics Screen Dump for OMP Printers
- Basic Search
- EZ Disk Master
- Function Keys
- Graphics Zoom
- Tape Index System
- 40K Basic (for 64K Cassette Users)
- Alpha Directory • Banner Creator
- LIST/DIR Pause • Disk Mailing List
- Super INPUT/LINE INPUT
- Tape-to-Tape Copy

Disk or Cassette Only For **$26.95**

UTILITY BONANZA I

Includes 20 best-selected utilities:

- 40K Disk Basic • Disk Cataloger
- Super Tape-to-Disk Copy (with Automatic Relocate)
- Disk-to-Tape Copy
- LList Enhancer (with page numbering!)
- Graphics Typesetter (two text sizes!)
- LARGE OMP Graphics Dump
- X-Ref for Basic Programs
- Hidden 32K (Use the "hidden" 32K from your 64K CoCo)
- Basic Stepper (Super Debugger!)
- RAM Disk (for Cassette & Disk Users)
- Single Key Printer Text Screen Dump

AND MUCH, MUCH MORE!!!

DISK (64K Req.) ONLY **$29.95**

OTHER SOFTWARE . . .

Mining on the Planet Dune becomes a dangerous job when faced with . . .

The Menace of the SandWorm

By Peter Meyers

I had just seen the movie *Dune* for the third time and had retired to my CoCo to think of some great new program to work on. I eventually gave up that ridiculous notion and began playing a game of *Colorpede*. As I played, I thought about all the people with 4K CoCos who are missing out on the fun. So with the ideas of *Dune* still fresh in my head, I began work on my program, *SandWorm*.

SandWorm is a Low-Res Centipede-type game in which you are an underground mining vehicle that must burrow through the sand, destroy boulders, and (most importantly) avoid the treacherous Sandworm.

After the title page appears, just press ENTER and the game screen is produced. Use the right joystick to control the red mining vehicle at the bottom of the screen. As you move, you burrow a path through the sand, but you must move around boulders or destroy them to clear the way for more burrowing. The firebutton triggers the Ultrasonic Devastator, a sheet of sound that breaks rocks (for three points) and petrifies any portion of the Sandworm (for 10 points) turning it to solid stone. Your score appears in the upper left-hand corner, and the computer keeps track of both the present and high scores.

The Sandworm also must maneuver around the rocks, and when it hits one, it changes direction, eventually moving downward to

Peter James Meyers is a 15-year-old sophomore at Thomas Jefferson High School in Rockford, Illinois. He enjoys experimenting with graphics and has owned his CoCo for six years and a CoCo 2 for the past two.

VCR

THE HOME VIDEO MONTHLY

A funny thing has happened in the home video market. As it gets easier and easier to watch what you want, it gets harder and harder to decide what that might be.

Dozens of new tapes are released into the stores every week, along with hundreds of hours of programming on the network and cable channels. It has reached a point where even the most devoted videophile can use a little help sorting through it all.

Now that help is available.

Inside **VCR** you will find clear, easy-to-read reviews of all the best new releases. You'll find out about little-known videos — what they're about and where to get them. And in the feature articles, you'll find some very entertaining reading about the entertainment business.

Now that you've discovered **VCR**, you won't want to risk missing a single issue. You can save yourself the trouble of walking to the newsstand each month, and save yourself some money at the same time.

Just fill out the attached card and drop it in the mail. Or even easier, call (502) 228-4492 and ask for Sandy. She'll see to it that **VCR** is delivered right to your door each and every month of the year.

Yes, enter my subscription for the next 12 issues of VCR.

At only $15, that's 36 percent off the regular newsstand price.

Name _____

*Subscriptions to VCR are $15 a year in the United States. Canadian rates are U.S. $22. Air mail rate elsewhere is U.S. $60. All subscriptions begin with the current issue. Please allow 6 to 8 weeks for first copy. Kentucky residents add 5% sales tax. **U.S. currency only, please.** In order to hold down non-editorial costs, we do not bill.

To order by phone (*credit card orders only*) call 800-847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call 502-228-4492.

Mail to: VCR, The Falsoft Building, P.O. Box 385, Prospect, KY 40059

destroy your miner. If any part of the worm collides with you, you are instantly smashed to pieces. The worm also possesses a natural burrowing beam that breaks up rocks as well as destroys you. When you are destroyed, the worm restarts at the upper left-hand corner of the screen, a few more rocks are added to the screen and you continue until all three of your miners are destroyed.

When the game ends, the high score is displayed and you are asked if you want to play again. As long as you do not end the program, the high score remains updated throughout the games.

The best thing about *SandWorm* is it only uses 2.083K of memory and will run on the smallest of CoCos. I have not included the famous speedup POKE because my system will not accept it, but those who want to should add it to give more excitement to the game. The game itself is pretty self-explanatory and you should have no trouble mining the rich soil of the desert planet with a little practice (and a lot of luck). □

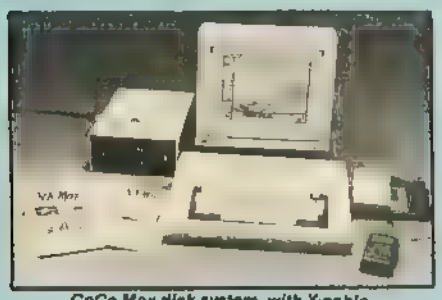
CoCo Max™ II

You'll use it all the time and love using it.

What is CoCo Max ?

Simply the most incredible graphic and text creation "system" you have ever seen. A Hi-Res Input Pack (more on the pack later) is combined with high speed machine language software. The result will dazzle you.



CoCo Max disk system, with Y-cable.

Is CoCo Max for you ?

Anyone who has ever held a pencil or a crayon for fun, school or business will love it. A 4 year-old will have fun doodling, a 15 year-old will do class projects and adults will play with it for hours before starting useful applications (illustrations, cards, artwork, business graphics, flyers, charts, memos, etc.) This is one of the rare packages that will be enjoyed by the whole family.

What made CoCo Max an instant success ?

First there's nothing to learn, no syntax to worry about Even a child who can't read will enjoy CoCo Max. Its power can be unleashed by simply ***pointing*** and ***clicking*** with your mouse or joystick. With ***icons*** and ***pull down menus,*** you control CoCo Max intu tively; it works the same way you think.

Don't be misled by this apparent simplicity. CoCo Max has more power than you thought possible. Its blinding speed will astound you.

It lets you work on an area 3.5 times the size of the window on the screen. It's so friendly that you will easily recover from mistakes: The ***undo*** feature lets you revert to your image prior to the mistake. As usual, it only takes a single click.

Later, we will tell you about the "typesetting" capabilities of CoCo Max II, but first let's glance at a few of its graphic creation tools

With the ***pencil*** you can draw free hand lines, then use the ***eraser*** to make corrections or changes. For straight lines, the convenient ***rubber-banding*** lets you preview your lines before they are fixed on your picture. It's fun and accurate. Lines can be of any width and made of any color or texture.

The ***paint brush,*** with its 32 selectable brush shapes, will adapt to any job, and make complicated graphics or calligraphy simple.

For special effects, the ***spray can*** is really fun: 86 standard colors and textures, all available at a click. It's like the real thing except the paint doesn't drip.

CoCo Max will instantly create many shapes: circles, squares, rectangles (with or without rounded corners), ellipses, etc. Shapes can be filled with any pattern. You can also add hundreds of custom patterns to the 86 which are included.

The ***Glyphics*** are 58 small drawings (symbols, faces, etc.) that can be used as rubber stamps. They're really great for enhancing your work without effort.

Pull down menus

Zoom in !

Control Over Your Work

CoCo Max's advanced "tools" let you take any part of the screen, (text or picture) and perform many feats:

• You can move it around • Copy it • Shrink or enlarge it in both directions • Save it on the electronic ***Clipbook*** • Flip it vertically or horizontally • Rotate it • Invert it • Clear it, etc. etc.

All this is done instantly, and you can always ***undo*** it if you don't like the results.

For detail work, the ***fat bits*** (zoom) feature is great, giving you easy control over each pixel.

To top it all, CoCo Max II works in color. Imagine the pictures in this ad in color. If you own a Radio Shack CGP-220 or CGP-115, you can even print your work in full color !

There is so much more to say, such as the capability to use CoCo Max images with your BASIC programs, the possibility to use CoCo Max's magic on any standard binary image file. There are also many advanced features such as the incredible ***lasso***.

Inside the Hi-Res Input Pack

Why a Hi-Res Input Pack ?

Did you know that the CoCo joystick input port can only access 4096 positions (64x64)? That's less than 10% of the Hi-Res screen, which has 49152 points! (256x192). You lose 90% of the potential. The Hi-Res Input Pack distinguishes each of the 49152 distinct joystick or mouse positions. That's the key to CoCo Max's power. The pack plugs into the rom slot (like a rom cartridge). Inside the pack is a high speed multichannel analog to digital converter. Your existing joystick or mouse simply plugs into the back of the Hi-Res Pack.

Electronic Typesetting...

You'll be impressed with CoCo Max's capability. Text can be added and moved around anywhere on the picture. (You can also rotate, invert and flip it...) At a click, you can choose from 14 built in ***fonts*** each with 16 variations. That's over 200 typestyles!

Examples of printouts

Printing Your Creations

There are a dozen ways to print your work. All are available with a click of your joystick (or mouse) without exiting CoCo Max. Your CoCo Max disk includes drivers for over 30 printers !

All the CoCo Max pictures are **unretouched** screen shots or printouts (Epson RX-80).

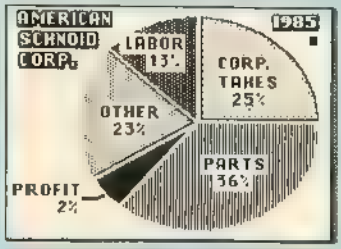
CoCo Max II™

The whole family will enjoy CoCo Max. Here are a few examples of the possibilities.

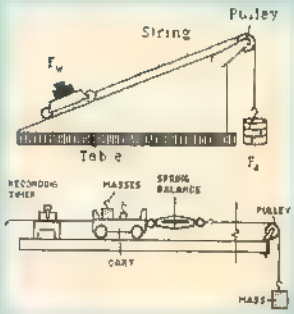
All these pictures are **unretouched** screen photos or printouts (on an Epson RX-80).

1 *Publish a newsletter or bulletin*

2 *Fun for children while stimulating creativity.*

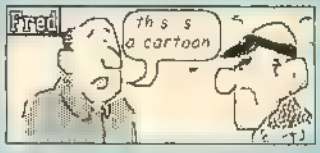


3 *Business graphs, charts, diagrams. Also memos*



4 *Junior's homework and science projects. Term papers too!*

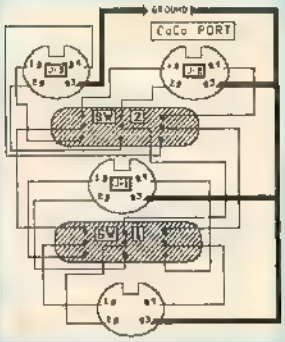
7 *Video portrait (with optional digitizer).*



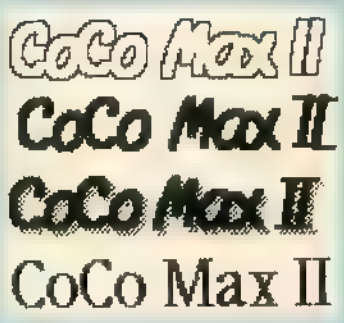
8 *This is a cartoon.*

5 *Over 200 typestyles to choose from! generate flyers.*

6 *A new way to express your imagination.*



9 *schematics and floor plans.*



10 *Logos and letterheads.*

System Requirements:

Any 64K CoCo and a standard joystick or mouse. (The koala pad and the track ball work, but are not recommended.)
Disk systems need a Multi-Pak or our Y-Cable. CoCo Max is compatible with any Radio Shack DOS and ADOS.
Note: the tape version of CoCo Max includes almost all the features of CoCo Max II except *Shrink*, *Stretch*, *Rotate*, and *Glyphics*. Also, it has 5 fonts instead of 14.
CoCo Max is not compatible with JDOS, DoubleDOS, MDOS, OS-9, the X-pad, and Daisy Wheel Printers.

Printers Supported:

Epson MX, RX, FX and LX series, Gemini, Star, Micronix, Delta 10, 10X, 15, 15X, SG-10,Okidata 82A, 92, 93, C. Itoh Pro-writer, Apple Image-writer, Hewlett-Packard Thinkjet, Radio Shack DMP 100, 105, 110, 120, 200 400, 500, Line Printer 7, Line Printer 8, TRP-100, CGP-220, (DMP-130 use Line Printer 8), PMC printers, Gorilla Banana.
Color printing: CGP-200, CGP-115

Pricing

CoCo Max on tape $69.95
with Hi-Res Pack and manual.
CoCo Max II (disk only) $79.95
with Hi-Res Pack and manual.
Upgrade: CoCo Max to CoCo Max II
New disk and manual $19 95
New features of CoCo Max II: 14 fonts and g yphic font, dynamic shrink and stretch, rotate, multiple drive capability 66 page scrapbook. point and click file load, color printer drivers, full error reporting
Upgrade: CoCo Max tape to disk
manuals, disk and binder $24.95
Y-Cable: *Special Price* $19.95
Super Picture Disks #1, #2, and #3
each: $14.95
All three picture disks $29.95

Guaranteed Satisfaction
Use CoCo Max for a full month. If you are not delighted with it, we will refund every penny.

Font Editor Option

A font is a set of characters of a particular style. CoCo Max includes 15 fonts. You can create new fonts of letters, or even symbols or graphics with the font editor. Examples: set of symbols for electronics, foreign alphabets, etc. $19.95

Video Digitizer DS-69

This new Low Cost Digitizer is the next step in sophistication for your CoCo Max system. With the DS-69 you will be able to digitize and bring into CoCo Max a frame from any video source: VCR, tuner, or video camera. Comes complete with detailed manual and C-SEE software on disk. Multi-Pak is required.
New Low Price Save $50..... $99.95
New: faster DS-69A..... $149.95

A Recipe to Fix CoCo Fried Chips

By Marty Goodman

It is very rare that controllers just spontaneously cease to work. In nearly all cases the reason is because the user has plugged, unplugged, or wiggled the controller in the computer or Multipak port socket while the power was on. What usually happens is the positive and negative 12-volt lines (on old CoCo 1s and on Multipaks) contact the adjacent NMI and Halt line pins. Often this also burns out the CPU (the 6809) and/or the SAM (6883, also given as 74LS783 or 74LS785) in the computer itself. Had Tandy bothered, for about $1.50 worth of zener diodes and SCRs it could have fully protected the computer from such abuse. But in all revisions of the CoCo circuit board so far, it has not introduced such protective circuitry.

Fixing the burned out disk controller usually entails replacing the burned out chips. This is facilitated by knowing what chips are likely to get burned out and by having a full set of spares.

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. Marty is the database manager of RAINBOW's CoCo SIG on Delphi. His noncomputer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

Usually, on the newer controllers only the main disk controller chip (1793-002, MB8877a, or 1773), the disk ROM and the write precompensation chip (if any) is socketted. Most of the small scale logic chips are soldered directly to the board. You should be reasonably adept in desoldering integrated circuits. You should have on hand a full assortment of all chips found in your particular controller. A spare controller of the same make and model will give you access to the bigger socketted chips and the smaller chips are usually available at general IC supply houses.

On most models of CoCo disk controller, the 7416 (open collector buffer) is quite vulnerable to damage from the −12-volt supply. In three CoCo 2 controllers I have fixed, both 7416s had to be replaced. These are U3 and U8 on the older type CoCo 2 controller with a 40-pin controller chip, and U8 and U6 on the newer Tandy controller that uses the 28-pin 1773 disk controller chip. The 74LS221 (one shot delay timer) seems to often burn out as well. Occasionally the main disk controller chip does, too.

On the old CoCo 1 controller from Tandy, the 74LS02 and the 74LS04 chips (U9 and U5 on that card) have a track record of blowing — sometimes spontaneously. Be sure to look for blown 7416s and 74LS221s on that model. You should also have the associated Tandy technical service manual and a frequency counter. The potentiometers may need adjustment so you'll need the frequency counter to check for proper setting.

On third-party model controllers, the circuitry is often similar to Tandy's, and thus the vulnerable chips are likely to be the same. In the case of the old J&M controller, the disk controller chip is available only from J&M itself.

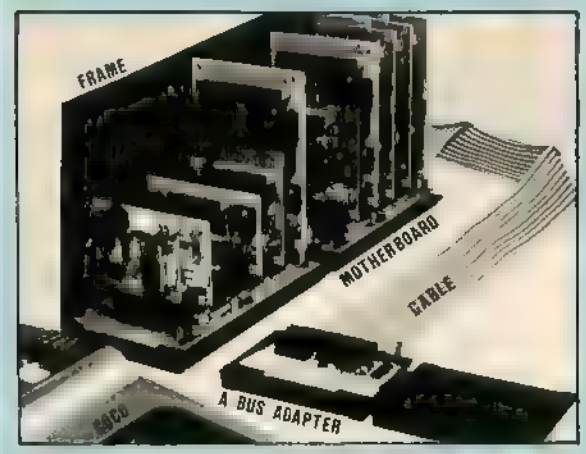
Oddly enough, the ROM chip on these controllers seldom seems to be affected. Indeed, once in the course of repairing a controller I plugged in a ROM upside down and turned on the power. After realizing my blunder, I turned off the power, inverted the ROM and tried it again. Much to my amazement, the ROM functioned just fine.

In addition to these general tips, the serious trouble-shooter will want schematic diagrams of the unit to be repaired. Tandy and HDS both supply such technical information on request and for a reasonable sum. J&M in the past was reluctant to release schematics, but may be changing its policies. DISTO agrees with the idea of releasing schematics of its products to the public, but to date has not made such information available. It is my impression that if enough customers insist on such information before buying any product from J&M or DISTO, both of these companies will quickly supply it.

The Amazing A-BUS

NEW

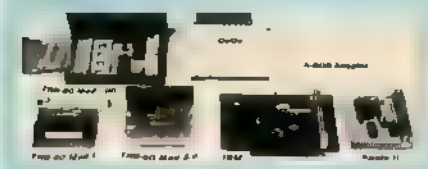
What will you do with it?



An A-BUS system with 2 Motherboards and 9 Cards.

SHEILA wanted to set up a variety of experiments in her lab. With an A-BUS, the computer can watch the mice instead of Sheila.
HARRY has a model railroad layout that he wished to automate. Now his home computer controls the engines, gates, signals, etc. through the A-BUS.
BOB tests electrical fixtures as they leave the assembly line. He develops test equipment quickly with inexpensive, off-the-shelf, and easy to use A-BUS cards.

But what's an A-BUS? It's the easiest way to connect a variety of cards that sense and control anything outs de the computer. With the A-BUS, your CoCo becomes an incred ble machine.
What would I need? First, an *A-BUS Adapter* to convert your computer bus to the A-BUS standard. Then a *Cable* (with one or two slots) to connect one or two A-BUS Cards. If you need more than two cards, the cable will be connected instead to the *A-BUS Motherboard*, which has five slots. Up to five motherboards can be chained. Finally, add you choice of *A-BUS Cards* to fit your project.
I'm not an engineer. Can I use the A-BUS? If you can wire a switch, you can use the A-BUS. No computer hardware knowledge is needed! A screwdriver is all you need for many projects.
What about software? Simple PEEK and POKE commands control the whole system, whether you read the time on the clock, switch the relays, take a temperature reading, or turn a motor.
What if I change computers? Incredibly, this is as simple as replacing the inexpensive adapter card.



A-BUS Adapters

Special: Complete set of all user's manuals. Typeset, illustrated with schematics. Only $10

CoCo to A-BUS Adapter AR-138: $49
Works with all CoCo's. Plugs into rom s ot or Multipak.
Disk systems without Multipak need Y-cable $19.95!

A-BUS adapter for: AApple II, II+, IIe.	AR-134. .$49
IBM PC, XT, AT and all compatibles.	AR-133 $69
TRS-80 Models 100, 200.	AR-135.. $69
TRS-80 Mod 3,4 4D Fits 50 pin I/O bus.	AR-132 $49
TRS-80 Model 4P. Includes extra cable	AR-137...$62
TRS-80 Model I. Plugs into 40 pin I/O bus.	AR-131...$39

A-BUS Motherboard MB-120: $99
Will accomodate five A-BUS cards. A sixth connector allows a second motherboard to be added to the first (with connecting cable CA-161.. $12). Up to five motherboards can be joined this way to a single adapter. The motherboard is mounted on a sturdy aluminum frame with card guides.

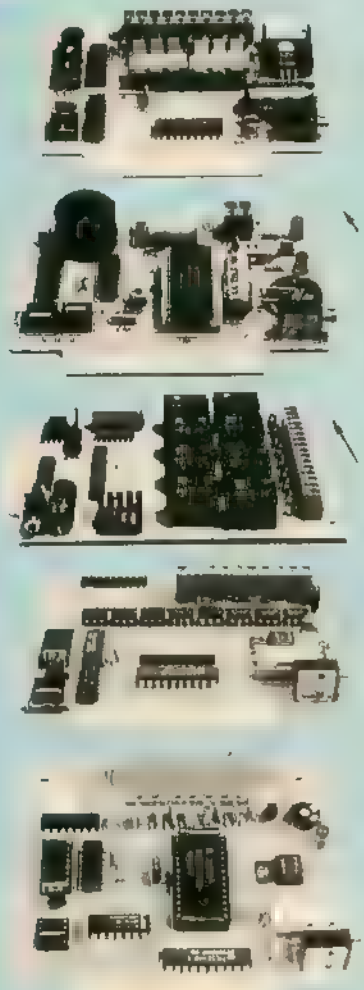
A-BUS Cable (3 ft.) CA-163: $29
Connects Adapter to 1 A-BUS card or Motherboard.
Special Cable for two A-BUS cards **CA-162...$39**

Relay Card RE-140: $129
8 industrial relays on board. Contacts are rated at 3 amps. You can control up to 64 cards (512 relays) using several motherboards. Jumpers are used to simply select the card address. The card is easily controlled in BASIC with "OUT" or "POKE". For example, OUT 1,0 turns all the relays off on card #1. Eight LED's show which relays are on.

Digital Input Card IN-141: $49
It's safe and easy to connect and read switches, keypads, thermostats, alarm loops, etc. The eight inputs can monitor the presence of voltage or switch position. Simple INP or PEEK commands read the status (On or Off) of the inputs. Each input is optically isolated for convenience and safety.

Analog Input Card AD-142:$119
With this 8 bit, 8 channel A/D converter your computer can read voltages, temperatures, pressures, light levels, etc. Take over 100 readings per second in BASIC (several thousand with machine language). It's simple to use: for example: OUT 1,3 selects channel #3, then A=INP(1) reads the voltage on that channel. Input range: 0 to 5.1V. Resolution: 20mV. Conversion time 120us.

Prototyping Card PR-152: $15
Protocard is 3½ by 4½ in. and accepts up to 10 IC's.



12 Bit A/D Converter AN-146:$109
This high performance analog to digital converter features accuracy to 0.025%, 130ms conversion time, sign and over range indication. The basic input range is −5 to +5 volts, with 1.2mV resolution, but the gain of the on-board amplifier can be set to measure microvolts. Ideal for a strain gauge thermocouple, pH meter, etc.

Motor Controller ST-143:$69
Stepper Motors are the ultimate in motion control. The special package (below) includes everything you need to get familiar with stepper motors: Each controller card drives **two** stepper motors (12V bidirectional, 4 phase).
Motor: 48 steps/revolution, 300 steps/second, ¼" shaft. MO-103.. $15. Power supply: PS-126 $10
Special Package: the controller card, *two* stepper motors, and power supply: **PA-181...$99**

Clock with Alarm CL-144:$89
It's the most powerful clock/calendar available. The features: • 5 second/month accuracy. • Keeps time, date, and alarm for 5 years (even with computer off). • Can time events down to 1/100 second. • Periodic "chime". • Full time and date alarm. • Four alarm outputs: Computer, LED, Buzzer, and Reed Relay. • Easy to use: for example H=INP(1) reads the hours, Y=INP(6) reads the year, etc.

Let CoCo take the tedium out of Adventure writing and leave the creativity to you

The Adventure Processor

By Bill Cook

Developing an Adventure game is not as difficult as one might imagine. Adventures are simply a collection of data and a series of true and false tests comparing the player's inputs to a list of data stored in memory of the computer.

The simplest way to store long lists of data in a computer's memory is through the use of arrays. Writing an Adventure game generally requires that information such as room descriptions, object lists, authorized user inputs and key responses be read into arrays so that they may be called upon quickly.

Arranging the data, formatting the text screen and processing of standard commands is required in all Adventures. Some programmers accomplish it differently. I prefer to keep it simple and easy to follow, since BASIC programs should be a learning experience.

Bill Cook is a manager for the Navy Exchange in Whidbey Island, Washington. He is the author of The Adventure Generator *and wrote his first Adventure in 1982. He uses the CoCo extensively for business applications and as a management aide.*

About the Program

Imagine a program that could actually write most of the code for you, automatically! A program that could save you hours of tedious writing, testing and debugging — a program that would function error-free, and in a matter of minutes save you more than 50 percent of the work in putting together your dream program.

ADV-PRO, or Adventure Processor, is a utility to save you hours of tedious typing of repetitive code. It simply writes a "shell" of an Adventure for you. It provides the following possibilities:

Up to 100 rooms, 60 objects and 30 commands.

A separate help message for every location in the game.

Individual score values for each object found.

Customized responses for each object "examined."

Randomized object placement, if desired, to make your game play differently every time.

Scroll-protected split screens.

Save game in progress/load previous unfinished game capability.

Operates with memory-stretching PCLEAR ZERO.

Outputs to tape or disk.

The first step in writing an Adventure is mapping it out on paper. On your map you should indicate the major compass points at the top, bottom and sides of the sheet. N, S, E, W, Up, Down, should all be indicated for ease in laying out the Adventure.

Each location should have a number as should each object you plan to place in the game. Have a good idea of the vocabulary (verbs and nouns) you want the program to recognize; two word sentences are the standard. Once you have completed this, jot down how many rooms you'll have, the number of objects and the number of commands (verbs).

Using the Program

ADV-PRO asks you for the number of items and limits you to 100 rooms, 60 objects and 30 commands. You are also asked for the room number in which you want the game to begin and for a filename. You are then asked whether to direct the output to tape or disk. After answering these questions *ADV-PRO* goes to work and creates an Adventure "shell."

Within a few minutes, you will be

over half done with creating an efficient and versatile Adventure game. *ADVPRO* writes to disk or tape, an ASCII file that is a loadable BASIC program. The pre-written coding sets up a machine language anti-scroll routine, frees the maximum available memory, initializes and reserves line numbers for all of your room descriptions, legal movement directions, help messages, object descriptions, noun lists, object score values, initial locations and verb lists. You simply modify the program with your customized data.

Here's a sample room description DATA line as generated: `10 DATA ROOM # 1 DESCRIPTION,0,0,0,0,0,0,HELP MESSAGE HERE.`

If you want room one to be described to the user: YOU ARE IN THE LIVING ROOM, simply change the line as follows. `10 DATA IN THE LIVING ROOM ,0,0,0,0,0,0,0,HELP MESSAGE HERE.` Notice that the "you are" is not necessary. The program automatically precedes each room description with "you are."

Next you decide in which directions the player will be able to move from this room. Let's assume that moving north takes you to room three, south to room four, east to room six, west to room 10, up and down lead nowhere. These locations should replace the series of zeroes that come next in the above data statement. Rooms that lead nowhere remain at zero. The line would now read like this:

```
10 DATA IN THE LIVING ROOM,3,4,
6,10,0,0,HELP MESSAGE HERE
```

Now for the help message. Assume that the player is in room one and he enters the command HELP. The remainder of the DATA statement should contain whatever response you would like the player to receive. For example, YOU SENSE A PRESENCE HERE. This phrase becomes the final part of the DATA statement:

```
10 DATA IN THE LIVING ROOM
,3,4,6,10,0,0,YOU SENSE A PRES
ENCE HERE
```

If you would like no help to be given to the user, simply leave off the phrase with the comma preceding it. This causes an automatic response of NO HELP HERE. Here's how the line would look:

```
10 DATA IN THE LIVING ROOM
,3,4,6,10,0,0
```

The standard format for object data looks like this:

```
152 DATA OBJECT # 1 DESCRIPTION,
KEYWORD,0,0,RESPONSE WHEN
EXAMINED
```

As with the room descriptions, modify the line to enter your object description. Let's assume your first object is a small rusty knife, you want it located in room six, it is worth 10 points if carried and if the player says EXAMINE KNIFE you want the game to respond with IT HAS A PEARL HANDLE. Here's how your modified line should look:

```
152 DATA A SMALL RUSTY KNIFE,
KNIFE,6,10,IT HAS A PEARL
HANDLE.
```

If you would like an object to be placed in the player's inventory initially, use location –1. If you would like an object to be placed in a randomized location (unknown), use location –2. Use of randomized object locations will make your game play differently every time.

Commands

The first seven commands the game recognizes are already built in to the game. They are: EXAMINE, INVENTORY, QUIT, SCORE, HELP, SAVE and LOAD. All the necessary coding for these commands to function is already written into your program. You can, of course, modify the code, but it will function as is. The remaining commands (if you specified more than seven) are represented in the program as null strings. The line would look like this:

```
508 V$( 8)=""
```

If you want the eighth command to be GET, simply change the line as follows:

```
508 V$( 8)="GET"
```

After making the changes to include the entire verb list, you are finished with the data portion of the Adventure.

Verb processing and conditional statements are the toughest parts of Adventure programming, and the most time-consuming. Let's still assume verb eight is GET. Processing for verb eight is accomplished between lines 7500 and 7990. This is the area where you process the different possibilities of reactions to the player's use of the verb GET. This is where you exercise your own programming talent and creativity. Here is a brief sample of what could be done:

```
7510 IF LO(N)=-1 THEN PRINT"YOU
ALREADY HAVE IT.":GOTO 60000
7520 IF LO(N)<>L THEN PRINT"I
DON'T SEE IT.":GOTO 60000
7530 IF CA=5 THEN PRINT"YOUR
ARMS ARE FULL.":GOTO 60000
7540 LO(N)=-1:CA=CA+1:PRINT
"OKAY. YOU HAVE IT.":GOTO 60000
```

Line 7510 checks to see if the object is already in the player's inventory and, if so, responds. Line 7520 checks to see if the object is in the current room and, if not, responds. Line 7540 places th object in inventory, increments th number of objects carried by one, an responds that you have the object.

Significant Variables
(In order of appearance)

R	Total number of rooms in the game
R$(n)	Description of room n
D(n,nn)	Authorized directions from room n
H$(n)	Help messages when in room n
O	Total number of objects
O$(n,1)	Description of object n
O$(n,2)	Keyword in description for object n
LO(n)	Room location of object n
SC(n)	Score value of object n
O$(n,3)	Response when object n is examined
V$(n)	Command (verb) n
NV	Total number of verbs
V1$	String containing first four characters of each verb
N1$	String containing first four characters of each object
C$(d)	Labels for directions
L	Player's current location
L5	Temporary location storage flag
LN	Line counter
Z	Temporary flag for inventory test
P	Test location for anti-scrolling
TURNS	Turn counter
I$	User's input
V2$	User's command (verb)
N2$	User's object (noun)
V$	Truncated verb
N$	Truncated noun
V	Verb number
N	Noun number
SC	Score counter
MX	Possible score
DV	Device number for loading/saving –1=tape 1=disk
F$	Filename for saving/loading

With a little experimentation and patience, you will be writing professional quality Adventures in no time. I look forward to seeing your contributions in future issues of this magazine and wish you happy Adventuring.

(You may direct questions about this program to Mr. Cook at 4346 Rhododendron Drive, Oak Harbor, WA 98277, 206-679-5220. Please enclose an SASE when writing.) □

PRO-COLOR-FILE
© 1984 by Derringer Software, Inc

ENHANCED 2.0

- 60 Data Fields for each record
- 1020 spaces available per record if needed
- Max mizes multiple drive operation
- 28 equation lines (+−*/)
- IF-THEN-ELSE logic test in equations
- Full Screen editing on up to 4 data entry screens
- Key click and auto key repeat
- Stores custom designed report formats
- Obtains totals, averages, or summaries for any field
- Output reports to printer, screen, or disk file
- Send data out to a DYNACALC compatible file
- Separate label generator for up to 10 across labels
- Pre-define up to 16 indexes for searching/reporting file
- Sorts 750 records in under 5 minutes
- User defined selection menus
- Repeated tasks performed with one keystroke
- Comes with 75 pages of documentation in a 3 ring binder
- Supported by a national users group
- Full time programmer support
- Supplied on an unprotected disk

~~$59.95~~ $49.95

PRO-COLOR-FORMS 2.0
© 1984 by Derringer Software, Inc

PRO-COLOR-FORMS will access data files created with PRO-COLOR-FILE and merge them with a letter or place them on pre-printed forms.

• STORE UP TO 6 FORMATS • USER DEFINED PAGE SIZE • SUPPORTS SPECIAL PRINTER CONTROL CODES • RIGHT JUSTIFICATION • PASSWORD PROTECTION • MERGES WITH GRAPHICS FROM MASTER DESIGN OR TELEGRAPHICS •

PRO-COLOR-DIR
© 1984 by Derringer Software, Inc

PRO-COLOR-DIR will read your directories and create a master data file that can be accessed by PRO-COLOR-FILE for sorting and reporting. 1000 + records can be stored on one diskette with valuable information about each program.

You can obtain hard copies of the information and create labels of the filenames for placing on the diskette itself.

• DISK ID NAME • FILENAME/EXT • TYPE OF FILE • DATE CREATED • DATE UPDATED • NUMBER OF GRANS ALLOCATED • NUMBER OF SECTORS ALLOCATED AND USED • MACHINE LANGUAGE ADDRESSES •

~~$29.95~~ $19.95

WORD PROCESSOR POWER

$59.95 INCLUDES MASTER DESIGN

CoCo Max II
GRAPHICS SUPERIOR

$79.95 INCLUDES TELEGRAPHICS!

@ SUMMARY
© 1985 Derringer Software, Inc

If you use your spreadsheet program to keep track of your expenses then @SUMMARY can help you analyze those expenses. For example, if you indicate a "Category" for each expense then @SUMMARY will produce a report that shows a total for each category, the highest amount, the lowest amount and the average amount. In addition, @SUMMARY can produce a hi-res line graph or bar graph of the analysis and allow you to place titles on the graph. A hardcopy of the graph can also be generated as well as saved to disk.

The analysis can be saved in a "data file" which can be loaded into DYNACALC or read in by @SUMMARY for future additions to the analysis. If you use other Spreadsheets such as ELITE*CALC then you have added a graphing feature to your spreadsheet applications. The analysis can also be saved in an ASCII text file of worksheets.

*Specify RS-DOS or OS9**

(disk only) $19.95

*OS9 version does not have Hi-Res graphing and requires BasicO9

DYNACALC© is a registered trademark of Computer Systems Center
ELITE*CALC is a trademark of Elite Software
OS9 is a registered trademark of MICROWARE and MOTOROLA

SIDEWISE
© 1984 by Derringer Software, Inc

Add a new "twist" to your printer's capabilities!

SIDEWISE makes your printer do something you never thought possible—print side ways!

SIDEWISE will read in any ASCII text file and print it out side ways using a Radio Shack, Epson, Okidata, C-Itoh or Gemini printers having dot-graphics ability.

SIDEWISE OS9 is compatible with DYNACALC OS9 and requires BasicO9

SIDEWISE OS9 (Disk only) ~~$39.95~~ $29.95

SIDEWISE RS-DOS ~~$24.95~~* $19.95

* RS-DOS version included FREE with DYNACALC*

PRINT HI-RES GRAPHICS USING TELEWRITER-64!

Use CoCo Max, Graphicom or other graphics programs to create letter heads and print them while using Telewriter-64.

Telegraphics interfaces with Radio Shack, Epson, Gemini, C-Itoh and Okidata printers having dot-addressable graphics. A simple modification to Telewriter-64 will allow you to exit Telewriter via the DISK I/O MENU and print out the graphic without affecting any of your text in the buffer.

This is the same feature that is included in our MASTER DESIGN program. Since we felt you don't need to buy two graphics editing programs, we have made this feature available at a reduced price.

~~$24.95~~ $19.95
(Available On Ly On Disk)

NO OTHER DISCOUNTS APPLICABLE

MASTER DESIGN
© 1984 by Derringer Software, Inc

Generates lettering in hi-res graphics that can be different sizes, skinny, bold, textured, drop shadowed, raise shadowed or tall. Also interfaces with the Telewriter-64 word processor for printing hi-res displays with your letters.

Take full advantage of all the extended BASIC hi-res graphic commands including boxes, circles, lines, copy displays and utilize GET and PUT features. Added commands include mirror reflection, turn displays backwards or upside down. Squish displays, create dot patterns for shading or diagonal lines.

The Letterhead Utility allows you to access hi-res graphics from Telewriter-64, your own BASIC programs or PRO-COLOR-FORMS.

Interfaces with dot matrix printers having dot addressable graphics.

~~$29.95~~ $24.95

New Dual Mode EPSON

The new Epson LX-80 offers printing flexibility in two modes: one mode allows you to print in a quick (100 cps) dot-matrix style for programming and graphics, and the Near Letter Quality mode (16 cps) produces precise (240 dots per inch), beautiful type for correspondence, reports, and similar purposes. The LX-80 offers 160 different type-style combinations, including Pica Elite, Enlarged, Emphasized, Condensed, Subscripts and Superscripts, and type-styles can be selected quickly from the top control panel or from program control. Comes standard in friction feed Tractor option is also available

LX-P package includes an LX-80, a serial interface, a Color Computer to Epson cable, and Printer Tutorial that teaches you how to program the different type styles ($29.95 value)

LX-P: LX-80 package $317 ($7 shpg)

ET-1 tractor option for LX-80. $29.50.

SF-1 Single-sheet feeder for the LX-80. $145 ($7 shpg)

Epson	RX-80 FT	repack	$207
Epson	LX-80 New		$249
Botek	Serial to parallel converter		$68.45
Howard	CoCo to Epson cable		$25

DM-1 Disk mailer holds from one to five diskettes 200 lb. cardboard construction 25 mailers/box — **$20.**

MONITORS

123 Zenith 12" Green Screen 640 dots x 200 dots resolution, 15 MHz band width. **$114** ($7 shpg)

123A Zenith 12" Green Screen Special, $67.50 ($7 shpg) 80 Column non glare

122 Zenith 12" Amber Screen, 640 dots x 200 dots resolution, 15 MHz band width **$117** (7 shpg)

141 Roland 13" Color Monitor with speaker 270 dots x 200 dots resolution, 4MHz band width **$247** ($12 shpg)

All monitors require video controller
Reverse video free with monitor order

MEMORY

64K Upgrades—1 Year Warranty

64-E1 for E Boards with complete instructions. Remove old chips and replace with preassembled package—no soldering or trace cuts **$28.45** ($2 shpg)

64-F1 for F Boards. No soldering needed. Capacitor leads must be cut **$24.45** ($2 shpg)

64-2 for COCO 2. Kit requires one solder point, no trace cuts. **$24.45** ($2 shpg)

CONTROLLERS

New Controller from J&M Has switch that allows either JDOS or RS DOS to be the disk operating system: eliminates software compatibility problems, while preserving the advantages of J&M's gold contacts and data separator. Also added to the DC-2 is a parallel port, which means a serial interface is no longer needed to make a parallel printer (like the Epson) work

DC-2 Disk Controller with JDOS **$128** ($2 shpg)

RS-1: RS DOS ROM Chip. $20.00 ($2 shpg)

DC-1 Disk Controller reads and writes to 35 and 40 track single and double-sided drives for *all* models of the Color Computer w/ JDOS. **$128** ($2 shpg)

VC-1 Video Interface mounts inside Color Computer by piggy-backing IC on top of interface—no soldering, no trace cuts. All models give composite video & sound **$24.45** ($2 shpg)

VC-2 for COCO 2—mono only **$26.45** ($2 shpg)

VC-3 for COCO 2—both color or monochrome **$39.45** ($2 shpg)

VC-4 for new Color Computer (no sockets, chips are soldered to mother board) Attaches with spring-loaded clips. Color or mono. **$39.45** ($2 shpg)

EPSON AND J&M

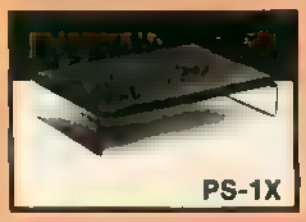
The EJ-P Package

The Epson LX-80 Printer teamed with our new J&M DC-2 Controller gives you top printing capabilities *plus* built-in switch gives JDOS or Radio Shack DOS so all software can run on your Color Computer. Package includes Epson LX-80 Printer with ET-1 tractor, DC-2 controller; parallel Color Computers to J&M cable; Epson Printer Tutorial ($29.95 value)

Complete EJ-P package $425.00 ($7 shpg)

DD-2	Double sided 360K disk with ½ height case & heavy duty power supply	$188
CA-1	Disk drive cable	$24.50
CA-2	Two drive cable	$34.50
DE-1	Disk enclosure ½ height with power supply	$58.

HOWARD QUALITY STANDS



New TS-1X Monitor Stand: Designer-beautiful stand with clear corner posts, easy side access to ROM port, reset and on/off buttons. **$39.50** ($3 shpg)

TS-1. Standard 13" monitor stand for the original Color Computer. Specify black, ivory or clear. 15" x11" x4" **$29.50** ($3 shpg)

TS-2: Same as above for the COCO 2. **$29.50** ($3 shpg)

PS-1X Printer Stand features new noise-suppressing foam top and cork base. 15" x11" x2½" **$24.95** ($3 shpg)

GUARANTEE

Howard Medical's 30-day guarantee is meant to eliminate the uncertainty of dealing with a company through the mail. Once you receive our hardware, try it out; test it for compatibility. If you're not happy with it for any reason, return it in 30 days and we'll give you your money back, (less shipping).

Hours: 8:00-4:00 Mon.-Fri
10:00-3:00 Sat

Software system requirements: CoCo with 1 disk, 32K RAM, 80-column printer
Add $2 for shipping

The Biggest

The Best

The Indispensable

The RAINBOW
THE COLOR COMPUTER MONTHLY MAGAZINE

It's called the *premier Color Computer magazine* for good ason. **THE RAINBOW** is the biggest, best, brightest and most mprehensive publication a happy CoCo ever had! Is there any onder we get letters daily praising **THE RAINBOW**, the agazine one reader calls "A Pot Of Gold" for his Color omputer.

THE RAINBOW features more programs, more information id more in-depth treatment of the Tandy Color Computer than ny other source.

A monthly issue contains 260 or more pages and two dozen ograms, 15 regular columns and as many as 20 product views. And advertisements' **THE RAINBOW** is known as *the* edium for advertisers — which means every month it has a ealth of information unavailable anywhere else about new oducts! Hundreds of programs are advertised in its pages ach month

But what makes **THE RAINBOW** is its people. Nationa ly nown people like Bill Barden, who has written 27 books on omputer topics and writes for us each month Or, Fred Scerbo, ho writes special programs at the request of readers. Experts ke Dick White and Joseph Kolar, two of the most knowledge- ble writers on BASIC. Communicators like Marty Goodman and ray Augsburg, who stay abreast of telecommunications dvances. Or, Dan Downard, **RAINBOW** technical editor, who nswers our readers' toughest questions. Educators like Dr lichael Plog and Steve Blyn, who show how CoCo can be used t home or school Advanced programmers like Dale Puckett, ho guide you through the sophisticated OS-9 operating ystem. Electronics experts like Tony DiStefano, who explain ne "insides" of the CoCo. These people, and many others, visit ou monthly through columns available only in **THE RAINBOW**

Every single issue of **THE RAINBOW** covers the wide pectrum of interests in the Tandy Color Computer — from eginners' tutorials and arcade games to telecommunications nd business and finance programs. Helpful utilities and do-it- ourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent eader reviewers take the guesswork out of buying new software nd hardware products.

Join the tens of thousands who have found **THE RAINBOW** o be an absolute necessity for their CoCo. With all this going or it, is it surprising that more than 90 percent of **THE RAINBOW** ubscribers renew their subscriptions?

We're willing to bet that, a year from now, you'll be doing the ame. For more information call (502) 228-4492. Or, for *credit ard orders only*, you may call (800) 847-0309

Get Your Very Own Pot O' Gold!

Here's your chance to have a Pot O Gold full of programs, articles and nformation about CoCo every month of the year! A subscription to **THE RAINBOW** is only $31* and you won't m ss a s ngle chock ful issue

As the premier magazine for the Tandy Color Computer **THE RAINBOW** has more of everything — and greater variety, too Do yourself and your CoCo a favor and subscribe to **THE RAINBOW** today!

We accept VISA, MasterCard and Amer can Express Non U S rates h gher **U.S. currency *only*, please.**

Rainbow On Tape Tops Typing

Tired of spend ng all your valuable computer time typ ng in those long, but wonderfu, **RAINBOW** programs each month? Now there s **RAINBOW ON TAPE** to help ease the pa n Each month all the lengthy programs (over 20 lines) in **THE RAINBOW** can come to you ready-to-run, thanks to **RAINBOW ON TAPE** At $80* per year or $10 a tape ** it is the biggest bargain going *(Note **RAINBOW ON TAPE** will not run on Dragon or MC 10 computers.)*

Back issues are avai able beginn ng with Apr l 1982 (except May 1983) Each month's tape will arrive at approx mately the same time as that month's issue of **THE RAINBOW**

RAINBOW ON TAPE is not a stand-alone product you will still need the magazine for loading and operating instruct ons and the necessary documentation **THE RAINBOW** magazine is a separate purchase

** Individua back issues of the tapes are $10 in the United States, $12 U S funds for Canada and a l other countries

What goes well with *the Rainbow?*

Rainbow On Tape!

We call it the other side of **THE RAINBOW** and we may have to raise the price just to call your attention to it. With as many as two dozen programs every month, **RAINBOW ON TAPE** is a luxury service at a bargain basement price

What is it? **RAINBOW ON TAPE** is a monthly cassette tape adjunct to **THE RAINBOW** and it's brimming with al the programs (those over 20 lines long) that fill the pages of the magazine. All you do is pop the cassette in your tape recorder and they're ready to run. No more lost weekends — or week nights — typing, typing, typing. With **RAINBOW ON TAPE**, you can read the article in the magazine then, in seconds, you load it up and run it. Yes, you could type them in yourself, as many people do. But all of them? Every month? There simply isn't enough time.

Isn't it time your CoCo became a full-time computer instead of a typewriter? Think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications — the full spectrum of **THE RAINBOW'S** offerings without the specter of keying in page after page and then debugging

RAINBOW ON TAPE — the "meat" of **THE RAINBOW** at a price that's "small potatoes." Food for thought. To get your first heaping helping, just fill out and return the attached reply card. No postage necessary

Discover the other side of **THE RAINBOW**. It's not only a time-saver, it's the key to a whole new outlook!

An old favorite comes to the computer

Tic-Tac-CoCo

By James W. Wood

Polar Tic Tac Toe is more than the old standby game with the three-by-three grid. The game is played on the pattern in Figure 1.

To win this game a player must place his mark in four adjacent positions. These four may be in a semicircle within any of the four circles. Or the winning four marks can be in a straight line. This line of four may go through the center of the pattern.

In the computer version of this game, players place red and green sections on the original blue grid with their joysticks. The program keeps track of turns, recognizes a winning combination and keeps track of total wins for each player. The loser of one game gets to go first in the following game. There are a total of 52 ways to win the game. But don't get overconfident, there are also 52 ways to lose. Good luck. □

James Wood is in his fifteenth year of teaching at Atwood Hammond High School in Atwood, Illinois. His subjects include photography, physics, chemistry, computer programming and math courses. He holds master's degrees in both instructional media and physical science education.

An educational game to encourage mastery of word concepts

Which Nym Is Witch?

By Brien Dick

When the first CoCos arrived in our school I was thrilled. However, the software we ordered hadn't arrived and the class needed something to use. This was the perfect opportunity for me to learn BASIC. It was one of my fourth-graders, Jody Eason, who came up with the idea to make a program like the matching games they played in class. *Nymatch* was born.

Matching games are popular learning tools. Drill and practice becomes fun. The cards are placed face down. Pick two cards and, if they match, you keep them and go again. The winner is the one with the most sets. Add the CoCo and you have an automatic answer checker.

Nymatch can be used in any subject. All you need are two ideas that share a relationship. In history one such pair could be Washington and first President. In math it could be 5+5 and 10. For my subject I chose reading. More specifically, Nyms. What are Nyms? I use Nyms as a broad category of words made up of synonyms, antonyms and homonyms. Synonyms are words that have the same meaning (woods/forest). Antonyms are words that have the opposite meaning (hot/cold). Homonyms are more confusing. Homonyms are broken down into two types: homophones and homographs. Homophones are two words that sound alike but are spelled differently (deer/dear). Homographs sound differently, but are written the same. Read can be pronounced reed or red.

Having a firm foundation in word concepts is an important link between reading words and understanding the material. Reading some articles in THE RAINBOW can be frustrating to those unfamiliar with the topic. Understanding what the words mean in the context of the article is essential. One way to strengthen vocabulary is to study how words relate to other words. That is the reason so much time is spent on Nyms in school. That is the goal of *Nymatch*.

Nymatch works on 16K non-Extended BASIC. Just type it in, save and run it. If you own Extended BASIC and get an OM Error, just PCLEAR 1 before running.

Although the game targets grades three through six, it is valuable for you as a parent to play with your child. Your child may not be able to "sound out" some words. Others may be used in a new way. Your help early on can make a big difference in how fast your child masters the vocabulary in *Nymatch*. Many children at this level are just beginning to learn problem-solving strategies needed in locating matched pairs. For them, the game is reduced to a guessing game. Playing with a parent gives them examples of other strategies.

Since this game is so versatile, you can add your own sets of matched pairs. Making changes is not hard. You need only modify two areas; the DATA statements and the submenu explaining the

Table 1

Lines	Function
10- 220	Title and set-up
230- 270	Game loop
360- 530	Record keeping
540- 630	Game subroutine
640- 760	Examples & directions
770-1330	Manipulate choices
1340-1380	Fancy print routine
1390-1430	Border & delay routines
1440-1720	Homonym card set
1730-2020	Antonym card set
2030-2320	Synonym card set

Brien Dick lives with his wife and three sons in Rensselaer, Indiana. He has a master's degree in education and teaches fourth grade. His hobbies include writing programs for his sons and the classroom.

nformation. If you have 16K, there is ot enough room to add any games. ou will have to replace any set of cards vith your own sets. Those with more nemory can add to *Nymatch*.

Add your game to the main menu in ines 550 to 590. Don't forget to adjust he ON/GOTO line numbers in Line 70. f you are adding more games, change ine 620. Add one to the five for each dded game.

You will need a set of 30 matched pairs for the DATA lines at the end of the program. Each DATA line holds the matched pair and its ID number. Remember that each set of 30 pairs must be in the same order as in the menu.

Final Notes

I hope your child enjoys *Nymatch*. Learning can and should be enjoyable whenever possible. Our CoCo proves that over and over again. Isn't that why most of us bought one in the first place?

Drop me a line if you are using a CoCo in your school. I'd like to hear from you, and I'm willing to help with problems you have. Just send a description of the problem with a listing, if you have a printer.

(You may direct your questions to the author at 112 South Milton, Rensselaer, IN 47978. Please enclose an SASE when writing.) □

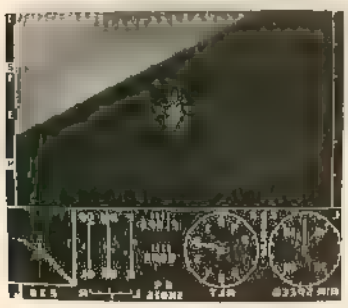
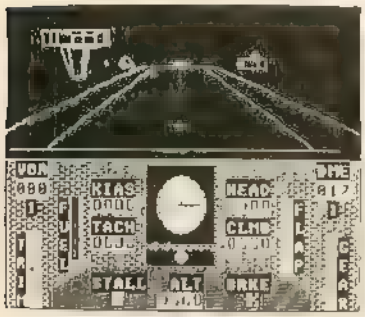
TOM MIX'S MINI-CATALOG



P-51 Mustang Attack/Flight Simulation

The ultimate video experience! Link two CoCo's together by cable or modem, and compete against your opponent across the table OR across the country! (Both computers require a copy of this program) The P-51 flight simulator lets you fly this WWII attack fighter in actual combat situations—against another player OR against the computer

32K Machine Language
Flight Manual Included
Tape $29.95 Disk $34.95



Worlds of Flight Small Plane Simulation

Real-time simulation generates panoramic 3-D views of ground features as you fly your sophisticated plane in any of nine different "worlds." Program models over 35 different aircraft/flight parameters. Realistic sound effects too! Manual included helps you through a typical short flight.

32K Machine Language
Flight Manual Included
Joysticks Required
Tape $29.95 Disk $34.95

Educational Best-Sellers!

Teachers Database II—Allows teachers to keep computerized files of students. Recently updated with many new features!

- Up to 100 students, 24 items per student
- Many easy-to-follow menus
- Records can be changed, deleted, combined
- Statistical analysis of scores
- Grades can be weighed, averaged, percentaged
- Individual progress reports
- Student seating charts
- Test result graphs/grade distribution charts

64K TDBII $59.95 Disk Only
32K TDBI $42.95 Tape $39.95

Fractions—A Three-Program Package 1/Mixed & Improper 2/Equivalence 3/Lowest Terms. Practice, review and definitions make learning easy.

32K Ext. Basic
Tape $30.95 Disk $35.95

Factpack—Three programs for home or school use provide drill and practice with basic "-/+/ /x" Grades 1-6

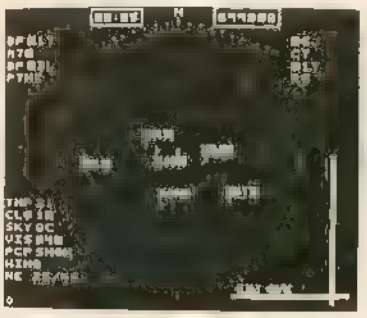
32K Ext. Basic
Tape $24.95 Disk $29.95

Vocabulary Management System—Helps children learn and practice using vocabulary and spelling words. Eleven programs including three printer segments for tests, puzzles, worksheets and five games; many features make this a popular seller!

Requires 16K Ext. Basic/
32K for Printer Output
Tape $39.95 Disk $42.95

Math Duel—A challenging math game that pits you against the computer in a game of wits. Use your knowledge of factors, multiples and prime numbers to gather points against your CoCo.

32K Ext. Basic
Tape $30.95 Disk $35.95



Approach Control Simulation From Betasoft Systems.

"Caught in a blinding snowstorm, two jet airliners are on a collision course. The pilots are unaware of the imminent danger. Hundreds of lives are at stake. A high-speed disaster is inevitable unless you act fast..." This and many other exciting scenarios await you as an Air Traffic Controller. The thrills, challenges and frustrations you'll experience with this authentic, real-time simulation will give you countless hours of discovery and adventure.

32K Machine Language
Tape $29.95 Disk $34.95

Unique Utilities!

New! Use the tools we've used to create "Donkey King," "Sailor Man" and others!

- Full use of 64K RAM
- 100% Machine Language
- No ROM Calls
- Selectable Drive
- Support 1-4 drives
- Menu Selected functions
- "Cold Start" exit to Basic
- Parameters easily changeable in basic loader

MAS Assembler—the finest ever! (Includes EDT)

Disk $74.95

EDT—Effortless full screen editing w/2-way cursor. Text files to 48K+. Copy, save, move, delete, print blocks, much more!

Disk $39.95

Deputy Inspector—Alphabetize, resort and backup directory; fast 3-swap backups, copy files or programs, auto-reallocate granules during backup for faster loading, more!

Disk $21.95

Sector Inspector—Alphabetize, backup and print directory; repair crashes, LLIST basic programs, read in and edit 23+ grans, much more!

Disk $29.95

We Have More Software Available Than Listed Here. Please Write for a Free Catalog!

New! Tandy 1000/1200/3000-IBM/PC-Compatable Software!

Inventory Mate—General purpose inventory program suitable for a variety of applications. Inventory turnover and transactions are kept on permanent record. Has automatic item count adjustment when shipping or receiving. Also generates reports suitable for many uses! **$79.95**

Postal Express—Lightning-fast general purpose mail program for home, small business. Each file stores up to 500 entries; in-memory storage for quick operation; automatic selective printing options using global search and categorizing features; Zip Code ordering, alphabetizing, accepts 9-digit and foreign Zips as well! **$49.95**

Special Delivery—Comprehensive mail list program for businesses, featuring versatility found only in much more expensive packages! Up to 2000 entries held in each file; additional address line can be placed anywhere in the individual mailing label; categorize and print entries according to custom needs; Zip Code ordering, alphabetizing, uses 9-digit and foreign Zips, too! **$79.95**

More Tandy-IBM/PC software available.

By Joseph Kolar
Rainbow Contributing Editor

Before we dive in and immerse ourselves in the nitty-gritty of the second part of our translation demo, I would like to make a few observations.

We have gone from the germination of an idea and, step by step, added to it to broaden its scope. As a newcomer to CoColand, you have helped construct a program that is well within your capabilities. There was no earth-shattering concept to grasp. But, don't expect to produce a viable program in a day or two. You will find gremlins lurking around and thwarting your efforts every step of the way. No matter. If you attend to the problem at hand and solve it at every stage of the process, you will have a usable, if not useful, program.

Did you notice that as you created this program, you had fun working out each segment? In spite of yourself, you began to associate the Romanian words with their English mates. Not only were you brushing up on your typing and programming skills, but you were becoming familiar with the subject matter.

Florida-based Joseph Kolar is a veteran writer and programmer and specializes in introducing beginners to the powers of CoCo.

This should hint at the potential for educational applications you are beginning to unleash. If you are familiar with a Romance or Germanic language, you may have spotted some cognates. The perceptive programmer might wonder if "raft" meaning "shelf," figuratively a plank, is not related to "raft," a platform for swimming, not to mention a roofing rafter.

Did you save your work on tape? CLOAD it. If not, copy Listing 1 from last month's tutorial. Check out Line 10 to make sure it is GOTO20.

Did you notice that, at times, we had no operating lines 22 and 32? Delete lines 22 and 32, then run. Again, we have three sets of X$ and Y$ strings and only one operating line, Line 42. CoCo always chooses the last X$ or Y$ sentence to operate on. Press BREAK, then restore lines 22 and 32. This observation may be helpful in solving another reoccurring problem.

Key in, from this month's Listing 1, lines 8, 50, 51 and 52. Line 8 prints both sentences without an intervening pause. List lines 50 through 52. Line 51 is a word-by-word literal translation of Line 50. Note, for the first time in our demo, that the sentence in Line 51 extended to the second text line. The invisible-vertical-line gambit is alive and well. Line 52 depicts the usual English translation.

Edit Line 10 at the end to GOTO50. Add at end of Line 5 :GOSUB5 and run. We allow the student/viewer to look over the sentence to be translated. Press BREAK.

Add at end of Line 51 :GOSUB8 and run. We display both the foreign sentence and word-by-word translation merely for informational purposes. Unfortunately, it is a tortured English rendition. Press BREAK.

Add at end of Line 52 :GOSUB3 and run. This displays the two sentences we intend to dissect.

You can devise your own system. This segment is included to give some ideas as to how to approach problems of this nature. You might revise GOSUB3 so both languages are put on simultaneously to display lines 50 and 52. You can also deep-six GOSUBs you do not intend to use.

List lines 50 and 52. We decide to break them into two parts. The most practical break is after "George." Count directly from the screen to get the 'P' and 'Q' values. Key in 53 P=12:Q=9: Do not press ENTER yet. Recall that if the next to last segment of a divided sentence is put on using GOSUB2, you can use GOSUB4 instead. Type GOSUB4

nd press ENTER. Run the program then ress BREAK.

Change Line 10 to 10 CLSZ:GOTO60. ey in lines 60 and 61. Press BREAK and st Line 60. Note that each succeeding ext line begins under the opening quote ark. You may also divide a word if ecessary. The lines look odd because in ine 60 there are no spaces between vords. This is because the words end at he right margin, and the left margin of he next row follows immediately. List ine 61. You can easily spot the invisible ertical line. This is because blank paces were used to fill in the empty pace up to the right margin so that the ext words would start a new row at the eft margin.

Key in 63 GOSJB3. This is a temporary use of GOSUB3 to display lines 60 and 61 in their entirety. It is good practice to double-check long strings for correct spelling and formatting before proceeding. Run the program. The strings X$ and Y$ abut. It doesn't look good. One solution is to drop Y$ two rows or 64 characters/spaces at the beginning of the operating line, Line 62. We want to move 'Y' location down by 64 spaces. Insert Y=Y+64: at the beginning. Run, then press BREAK then CLEAR. List lines 60 and 61.

Our first part will end with the space after '$' and ',' respectively. Count directly from the screen to determine the first set of values, P=24 and Q=27.

Rekey Line 62 to read 62 Y=Y+64: P=24:Q=27:GOSUB2:. Press ENTER. Run and press BREAK, then CLEAR. List lines 60 and 61. Edit Line 62 and enter X.

The next part will end with "urc@" at space 31 and "ascended" at space 38. Add P=31:Q=38:GOSUB2:. Press ENTER. Run and press BREAK, then CLEAR. List lines 60 and 61. Edit Line 62 and enter X.

The next part, "pe tronul" ends at 41 and "the throne" at 52. You can pick up the count either beginning at 32, a known signpost at the start of text row two, or pick up the last 'P' or 'Q' value. You know that "ascended" ended at Q=38. By looking at Line 62, start tapping away with "TO---", T=39, O=40, space=41, etc., to the next division. Enter P=41:Q=52:GOSUB2:. Press ENTER and run it. Press BREAK, then CLEAR. Edit Line 62 and enter X.

The next portion ends at the space after "romaneshti." Pick up the last 'P' value from Line 62 and count off. 'P' will equal 57. The 'Q' value ends after "wallachia."

Look at Line 61. Note that "wallachia" extends across the invisible vertical line. We know that 'C' is at number 64, so pick up the count from that point. It ends at 68. Enter P=57:Q=68: GOSUB2:. Press ENTER and run it. Press BREAK and CLEAR. List lines 60 and 61. Edit line 62 and enter X.

The next part ends in both X$ and Y$ after "1436." You can begin calculating 'P' from number 64 and you can pick up the 'Q' starting number from the last 'Q' value, 68. Determine the values.

Enter P=71:Q=85:GOSUB2:. Press ENTER and run it. Press BREAK and CLEAR. List lines 60 and 61. Edit Line 62 and enter X.

> ***"This mistake may lie dormant while you are creating the program, but after you finalize it, it pops up to haunt you."***

The next 'P' section ends after "incerc@." Pick up the count from the last 'P' value in Line 62 (71) and count. The next 'Q' value is the last word of the text line "and tried." We know the next line begins with number 96, so we subtract one to get to the right margin of the previous line to get 'Q'.

Enter P=82:Q=95:GOSUB2:. Press ENTER and run it. Press BREAK and CLEAR. List lines 60 and 61. Edit Line 62 and press ENTER. This time we won't 'X' to the end. This would cause Line 60 to scroll up and off the screen, losing our place. First, we will determine our next break, which ends after "scape," picking up the count from Line 62. Now, we can type X and P=91:. Do not press ENTER! The English equivalent is "to free." We pick up the count by counting down from the opening quote, 0, 32, 64, 96 and start counting. Add Q=103:GOSUB2:. Press ENTER and run it. Press BREAK and CLEAR. List lines 60 and 61. Edit Line 62 and press ENTER. We have one more break to do. Be on the alert because, after we get our next 'P' and 'Q' values, we add GOSJB4 instead of GOSUB2, then we'll be finished.

The last break is "tsara," which ends

Educational Programs

? Questions ??

Questions — ***a powerful, easy to use, authoring program!*** **Questions** has as many uses as its owners have creativity Teachers have used **Questions** to develop pre and post tests, to make copies of the same test with questions in a different order, and to review and reinforce difficult lessons with their students. But **Questions** is not limited to school uses. Enterprising people have found other uses for it Party-givers have used it to personalize games for baby and wedding showers, and for creating their own trivia games Administrators have used it for inservice training Children have written their own riddles with it. If you own **Questions**, you'll find a way to use it. You will also be pleased with its many fine features:

- ★ Word processing commands that allow you to make changes as you type
- ★ Screen commands so you do not have to constantly refer to the manual
- ★ Options to take the quiz on the computer or to print a hard copy of it
- ★ Sequential or random presentation of questions
- ★ The ability to print the same test with questions in a different order
- ★ The printing of an answer key
- ★ The option to use expanded printer lettering to create large print tests
- ★ The ability to save quizzes to cassette or disk
- ★ A review feature which permits students to study questions that have been missed
- ★ A record keeping system
- ★ Multiple choice, true/false, or fill in the blank formats

Questions is truly a professional authoring program that meets the needs of all of its users.

Reading Comprehension Series
Grades 2 - 4

B5's **Reading Comprehension Series** is a set of data files to be used with the **Questions** program described above. Each file contains over 100 questions, organized into 6 to 8 sequential lessons. Lessons build from simple to complex. This series emphasizes the thinking aspect of reading Simple sentence structure allows the student to concentrate on thinking skills

Main Idea ★ Sequencing
Fact & Opinion ★ Cause & Effect

Each Title: Cassette - $10.95
Disk $12 95
Complete Series of 4 Titles:
Cass. - $39.95; Disk - $41.95

☞ **Most B5 programs are available through *Radio Shack® Express Order.***

RAINBOWfest®

Show Schedule
Friday evening
– Exhibits open from 7 p.m. to 10 p.m.
Saturday
CoCo Community Breakfast at 8 a.m.
Exhibits open at 10 a.m. and close at 6 p.m.
Sunday
Exhibits open from 11 a.m. to 4 p.m.

Oct. 17-19

Princeton

RAINBOWfest is the only computer show exclusively dedicated to your Tandy Color Computer. Nowhere else will you see as many products, have access to the top experts, or be able to attend free seminars. It's the next best thing to receiving the latest issue of THE RAINBOW in your mailbox!

Every RAINBOWfest features many delightful surprises. It's a great opportunity for commercial programmers to show off new and innovative products for the first time. You get the jump on new capabilities for your CoCo. In exhibit after exhibit, there are demonstrations, opportunities to experiment with software and hardware, and special RAINBOWfest prices.

You can set your own pace between visiting exhibits and attending the valuable, free seminars on all aspects of your CoCo —

from improving BASIC skills to working with the sophisticated OS-9 operating system.

Many of the people who write for THE RAINBOW — as well as those who are written about — are there to meet you and answer your questions. You'll also meet lots of other people, just like you, who share your interest in the Color Computer. It's a person-to-person event, as well as a tremendous learning experience, in a fun and relaxed atmosphere.

To make it easier for you to participate, we schedule RAINBOWfests in different parts of the country. If you missed the fun in Chicago, Illinois, why don't you make plans now to join us in Princeton? For members of the family who don't share your affinity for CoCo, you'll be comfortable knowing that RAINBOWfest is located in an area with many other attractions.

The Hyatt Regency-Princeton offers special rates ($79, single or double room) for RAINBOWfest. The show opens Friday evening with a session from 7 p.m. to 10 p.m. It's a daytime-only show Saturday — the CoCo Community Breakfast (separate tickets required) is at 8 a.m., then the exhibit hall opens promptly at 10 a.m. and runs until 6 p.m. Sunday, the exhibit hall opens at 11 a.m. and closes at 4 p.m.

Tickets for RAINBOWfest may be obtained directly from THE RAINBOW. We'll also send you a special reservation form so you can get your special room rate.

Come to RAINBOWfest!

RAINBOWfest

Princeton, New Jersey
Dates: Oct. 17-19, 1986
Hotel: Hyatt Regency-Princeton
Rooms: $79 per night, single or double
Advance Ticket Deadline: Oct. 10, 1986

FREE T-Shirt to first five ticket orders received from each state

The POSH way to go.

You may wish to have your travel arrangements handled through RAINBOW affiliate POSH Travel Assistance, Inc. of Louisville. The people at POSH are very familiar with both RAINBOWfest and the area in which it's being held. So, for the same POSH treatment many of our exhibitors enjoy, call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOWfest attendees.

YES, I'm coming to **Princeton!** I want to save by buying tickets now at the special advance sale price. Breakfast tickets require advance reservations.

Advance ticket deadline: Oct. 10, 1986. Orders received less than two weeks prior to show opening will be held for you at the door. Tickets will also be available at the door at a slightly higher price. Tickets will be mailed six weeks prior to show. Children 4 and under, free; over 4, full price.

just before our invisible vertical line and therefore must be 95. Type X and P=95:. The last mate is "the country" and we pick up 'Q' from Line 62 and count. Type Q=115:GOSUB4, press ENTER and run. Whew!

It is suggested that you advance from division to division until you feel comfortable with this system. Once you get it under your belt, you can figure out the operating line completely before you check it out.

Did you notice the need to use CLEAR when working on a long text line?

Let's consider the case of differing word order between languages.

Type 10 CLSZ:GOTO80. Key in lines 7, 70 and 71. List lines 70 and 71. "Om" means "man" and "crud" means "cruel." If we choose to break after "om," we find the word "man" is further in the sentence and we have a new problem: to pluck out "man" without "the cruel." We must use a new stratagem to produce parallel definitions.

We could chicken out and make the break end after "crud" and "man" respectively, but we won't.

Look at Line 7. This GOSUB allows us to display X$ as usual. We use MID$ to pull out the word we want and display it first. MID$(Y$,Q,R) tells us that from a specified point, 'Q', in the body, MID$, of sentence Y$, we want to display 'R' characters/spaces.

First, recall that we pushed down Line 61 64 spaces to Y+64. Since we are returning to a normal line, we must return 'Y' to its usual value. We must begin Line 72 with either Y=Y-64 or Y=225. Otherwise, as we add numerous program segments, some of which will be overly long text lines, Y$ will be displayed lower and lower and eventually drift completely off the screen, due to a cumulative error.

This mistake may lie dormant while you are creating the program, but after you finalize it, it pops up to haunt you.

Back to work! We determine the value of 'P', 5. Type 72 Y=225:P=5:. Do not press ENTER yet. Note the following procedure carefully: The word we want to appear first is "man" with its leading and following blank spaces (for aesthetic reasons). Since it is in the body of the sentence we must determine the values of MID$(Y$,Q,R).

We count on the screen from the invisible vertical line, the number of spaces up to and including the last letter of the word in front of the word we are targeting. It is the 'L' in "cruel," 11 spaces. This is our offset 'Y' value, Y=Y+11. Add Y=Y+11:. 'Q' is always one number higher than the offset 11. Add Q=12:. To figure out 'R', count, starting at 'Q', the number of spaces to be displayed (six). Add R=6:. To activate MID$(Y$,12,6), we tack on GOSUB7: and press ENTER. Run it, press BREAK and list lines 70 and 71. Edit Line 72 and enter X.

We must return to the beginning of Y$ to display "the cruel." We reduce 'Y' by the amount of the offset, 11. Add Y=Y-11:. We are ready to work up the next word(s). The break in X$ is the space after "crud," whose 'P' value is 11. There are a variety of ways to pick up 'Q'. To be safe, count from the starting quote up to and including the space after "cruel" (even though this last space is already displayed), Q=12. Type P=11:Q=12:GOSUB2:. Press ENTER and run.

The next division is after "ishi" and "himself." Press BREAK and list lines 70 and 71. Edit Line 72 and enter X. Type P=15:Q=26:GOSUB2: and press ENTER. Run it and press BREAK. List lines 70 and 71. Edit Line 72 and enter X.

Next, we will break after "ucise" and

Quality Stationery for Personal Computers

Computerware's Products of the Month

C.E.O.
The Complete Electronic Organizer
by Warren Jinchuk

$10.00 off

With the **C.E.O.** desktop software your CoCo becomes your own personal administrative assistant. Screens show in an easy to read hires display with upper and lower case. The icons (pictures for commands) make it simple and fun to use.

Using the **Date Book** you can keep track of special occasions, memos, and hourly notes that can be printed or displayed as a daily schedule or for a whole week. The **Calculator** allows you to do quick computations. Let the accurate real-time **Clock** help keep you on time. It beeps every hour, and also has a convenient alarm that you can set to remind you of those important appointments. The **Phone Directory** can keep up to 194 entries of names and phone numbers. Instead of jotting down notes on small pieces of paper than can get lost, use the **Freeform File Drawer** to write messages. Your notes will be neatly organized and saved for instant retrieval.

You can display or print any of your entries upon request. **C.E.O.'s** mini-formatter prints everything in an easy-to-read style. **$49.95**

Requires 64K, at least one disk drive. Supports dual drives when available.

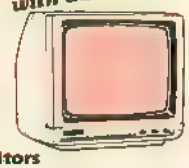
$5.00 off

Pro Golf
by John Sandberg

Tee off with this great simulation of America's most played sport. **Pro Golf** offers practice sessions on the Putting Green and the Driving Range before you go to play either the front or back nine. You'll face real situations like wind factors in the rough or out-of-bounds, trees, water traps, and more! **Pro Golf** provides an entertaining challenge to the beginner as well as the pro, with 36 holes to practice on. **$29.95**

Requires 32K, Disk, Extended Basic

Monitors



NAP Monochrome Monitors

The 20 mhz band width, 800 line resolution and 80 x 25 display insure a crisp picture. The non-glare screen and streamlined styling is also attractive. Plus it has audio input.

Green 12" Amber 12" **$105.00**

plus $5 shipping

SAKATA Color Monitor

Beautiful 13" color display with 280 x 300 line resolution. Includes composite video, color and audio.

$175 plus $15 shipping

Universal Video Plus
composite video interface for all Color Computers!

We would like you to look at our **Universal Video Plus** and would dare you to compare it with any other video interface. We feel confident that you will see that it is the **best product** and the **best buy** in CoCo monitor drivers ever!

- The Universal Video Plus works with **every CoCo**. Easy-to-follow **clear instructions** are included.
- **All cables** (audio & video) are included. No need to buy extenders or extra cables as required by other drivers.
- **Heavy duty construction**, evidenced by sturdy leads and connectors.
- **Shielded audio & video cables** insure that no extra RF interference is introduced from the Universal Video Plus, unlike other interfaces.
- The **adjustment** pot on the Universal Video Plus makes it **easy to optimize** the video signal for each computer. You don't have to modify your computer to get good display!
- Our advanced design gives the **highest quality display.**
- **Installation is easy.** There's no soldering and no dismantling of the RF shield.

Universal Video Plus **$34.95**

$5.00 off

Treasure of the Aztecs
by Scott Cabit

You take a small force to search the jungles in hopes of finding the missing **Treasure of the Aztecs**. While following a faint trail, your team is ambushed by Aztec warriors. You awaken after the battle alone and disoriented. Can you, a lone soldier, survive the perils of the jungle... and rediscover the **Treasure of the Aztecs**?

This unique graphics adventure features special sound effects and four voice music. There are over 50 hires graphic screens and it allows use of the Radio Shack SSC Speech Cartridge.

Requires 64K

Cassette $24.95 **Disk $27.95**

$5.00 off

Escape : 2012
by B. Chambless

In the great tradition of outer space adventure we present **Escape: 2012**. While on a mission for the United Earth Forces, you've been captured behind enemy lines. As a prisoner of war, you must escape. In this graphics adventure there are over 35 objects to deal with, 137 rooms arranged in a 3 dimensional maze of 4 levels to traverse and at least 2 arcade sequences to master before you can proceed. The graphics and action are superb! **Cassette $24.95**

Requires 64K **Disk $27.95**

"killed." Type P=21:Q=34:GOSUB2:. Note that we pick up 'Q' at number 32, the invisible vertical line. We won't run this one.

We decide to put on "dushmanii" and "the enemy" next. The phrase, "f@r@ mil@" and "without pity" will be put on as a unit. That being our plan, we are alert to the fact that we are calculating the next to last 'P' and 'Q' values. We know that "dushmanii" is the last word on the row, so we use the right margin number, 31, or P=31. We pick up our count from the last 'Q' value in Line 72 and count it out, 44. Type P=31:Q=44:GOSUB4. Press ENTER and run.

Checking out our handiwork, I see that we could have placed parentheses around "himself" because we don't usually use the reflexive pronoun in this context. You may want to alter Line 71 to do so. Be warned, some of your 'Q' values will have to be revised. In fact, you should be eager to work it out. Refer to Listing 2, lines 71 and 72 to see if you got the same answer. It is not necessary to copy this listing.

That was the good news. Now, here is the bad news. Lines 70 through 72 present another problem that I neatly side-stepped.

From Listing 2, list lines 70 and 71. Key in the lines as lines 80 and 81. Now list 80 and 81. Aside from the fact that the word order is different, the equivalent of "om" is "the man," not "man." This is a split-section. This creates a new problem that occurs frequently in German verbs. Note the sentence "Ich mache das fenster zu" where "zumachen," meaning "to shut," is split — "mache---zu."

The definite article is separated from the noun in Line 81. Rather than work out both the inverted word order and the split-section at the same time, we solved one problem, and now we'll try both

Key in Line 9. This GOSUB displays X$ up to the break; Y$, to the first break at 'Q'; then it skips to a second location (Y+A+1) and pulls the balance out of the body of the sentence.

GOSUB9 handles the split-section in the second language. If you need it for the first language, your project is to modify this line. If you can't dream up a demo sentence to check it out, then make the contents of Line 80 Y$ and X$ in Line 81.

The 'P' value of "om" is five. The 'Q' value of "the" is six. Count to the last letter of the last word in front of the target "man," 11, which is 'A'. 'B' is always the next space. B=12 and 'R' is the number of spaces to be displayed, six.

Type B2 P=5:Q=6:A=11:B=12:R=6:GOSUB9, press ENTER. Run it and press BREAK.

Figure out the next break, "crud"-"cruel," P=11 and Q=12. Edit Line 82, press X and ENTER, then type P=11:Q=12:. Since we already displayed the various parts in the last segment (lines 70 through 72) let's cut the agony and finish. Type GOSUB4 and run it.

As usual, there is an easier version of GOSUB9, but it is not consistent with our rigid demo format. Lines 100 through 142 contain a few more sentences. They are a bonus for the dedicated programmer to study or work through for practice.

You can delete lines 20 through 142 and use this program as a core to translate sentences in some other language. This program is great for self-study. Crack open a conversational grammar and sharpen your programming skills while painlessly absorbing a foreign vocabulary. □

About Your Subscription

Your copy of THE RAINBOW is sent second class mail. If you do not receive your copy by the 5th of the month of the publication date, send us a card and we will mail another. Canadian subscribers and foreign airmail allow two additional weeks.

You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an "account number" and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone *except* those whose subscriptions are through our distributor in Australia.

About The One-Liner Contest

THE RAINBOW's One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

Here are the guidelines: The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained — no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be *very* short.

Send your entry (preferably on cassette) to.

THE RAINBOW One-Liner Contest
P.O. Box 385
Prospect, KY 40059

Radio Shack has the best

...of everything.

Accessories can make the difference between just a computer and an *efficient* computer system. That's why Radio Shack offers a wide selection of accessories that make the most of your Color Computer.

Save valuable time with the Multi-Pak Interface (A, $99.95). It connects up to four Program Pak™ cartridges so you can change programs quickly and easily. You can change between slots with the built-in selector switch, or under program control.

If you like being a winner, then this is the fast-action joystick for you! With 360° movement and single-shot control, these joysticks give you the advantage every time (B, Pair-$19.95).

With our FD-501 Thinline Disk Kit (C, $299.95) you can turn your Color Computer with Extended BASIC into a full-fledged disk system. Because the Kit comes complete and ready to run—all you have to do is plug it in and you'll have 156,672 characters of user storage per 5¼" diskette.

Need the ultimate in storage capabilities? Then the Hard Disk Interface (not shown, $129.95) can give you just that.

Want quick and accurate control? Let our Color Mouse (D, $49.95) scurry across your tabletop to accurately position the computer's cursor movement.

Radio Shack has the right accessories for your Color Computer!

Is your skill and courage enough to save the Earth from . . .

Can be modified for 16K ECB

The Evil Tyrant Star Lord

By Raju Dash

You are the last hope for your people. Ever since those dreaded aliens arrived, they have caused nothing but destruction. You are in command of the last surface laser cannon. You must use this powerful weapon to destroy the merciless attackers. If you fail, the tyrant Star Lord will enslave your people. It's up to you!

You must position the laser turret and try to hit the attacking alien ship. If the alien ship hits you with one of its bullets, you lose one shield. At the beginning of *Starlord* you have three shields. An indicator in the top right-hand corner of the screen displays the last three shields you have. (It is possible to have more than three shields, but only the last three are indicated.)

The flat land on which your turret moves (the yellow strip of land) protects you from incoming bullets. However, alien ships slowly destroy the earth below as they descend toward the bottom of the screen. If you collide with one of the aliens, you lose a shield. In order to advance to the next skill level, you must destroy one full squadron (16 ships). You are rewarded with a shield.

The screen clears and a new, flickering type of ship starts descending toward the ground. It is important that it be shot before it reaches the ground. If it lands, you will not advance to the next skill level; rather you will have to fight another squadron from the same skill level. The number of ships and the speed of the game increases as the skill level increases.

When you lose all of your shields, the program displays the title screen. At the top of the screen, the high score is displayed, and at the bottom right, the most recent score is shown. At the bottom left is the current skill level. Unless the Reset button is pressed, you continue playing from the skill level on which you died. This way you do not have to repeat the screens you completed before. While the program runs, you may pause execution by pressing the BREAK key. To restart press ENTER.

The program allows either joystick or keyboard input. Simply press 'J' or 'K' from the title screen to make a selection. If you choose the joystick option, use the right joystick to move and the button to fire. For the keyboard option, use the left- and right-arrow keys to move and the space bar to fire.

Raju Dash is a senior at Downers Grove North High School in Illinois. He started programming in BASIC on a 4K Color Computer five years ago and has progressed to programming in assembly language on a 64K CoCo 2.

Radio Shack's Color Computer 2®

SAVE ON OUR BEST!

64K Memory! Extended BASIC! Cut $40...new low price $159.95

The Color Computer 2 is an affordable computer that allows you to write programs tailored to your personal and household needs. It's ideal for small-business and professional uses alike. With the built-in Extended BASIC language, you can access 32,000 characters of memory. To access the full 64K memory, simply add a disk drive and the optional OS-9 disk operating system.

The powerful Color Computer 2 (26-3127, was 199.95 in Cat. RSC-16) creates detailed color graphics from simple, one-line commands, and is ideal for drawings, designs, charts, engineering diagrams and even animation!

Ready-to-run software can help you set up personal and household budgets, create a household inventory, keep track of your investments, write letters and reports and record recipes.

With a wide range of educational software available, your children can use the Color Computer 2 to help strengthen their math, spelling and reading skills. The family can even play exciting computer games. The system attaches to any TV and is easily expanded.

Get the Color Computer 2 and your family will immediately start to enjoy the advantages of home computing . . . together!

TV not included. Price applies at Radio Shack Computer Centers and at participating Radio Shack stores and dealers. OS-9/TM Microware and Motorola

After typing in the BASIC loader for *Starlord*, save it to disk or tape. Then perform a cold start on your computer. Type in POKE 25,57:POKE 14592,0:NEW to reserve room for the assembled program. Now CLOAD the BASIC loader back into the computer. If you want to save the program as a binary file, delete Line 50. Run the program. In approximately 30 seconds the program will execute. If you deleted Line 50, the computer simply prints OK when it is finished poking the data into memory. Now you can save it. Type CSAVEM"STARLORD",10240,14430,12124 to save the program as a binary file.

Now all you have to do is CLOADM and EXECute to run the program. The program runs on any Color Computer with 32K memory. Since the assembled version will run on a 16K system, the easiest way to load the program would be to make a binary file of it on a 32K system and then load the machine language code on the 16K system. (The BASIC loader takes up a little over 16K.) Another, more tedious method, would be to break the loader up into several short BASIC loaders, each loading a part of the total program. Then, once the entire program has been poked into memory, it can be saved as a binary file. This process is tricky, so be cautious.

Starlord is a very exciting game particulary at the higher skill levels. Here's a tip: A bullet takes longer to hit a ship that is higher up so you must fire in advance of the ship in order to hit it. Hitting ships becomes easier at the higher skill levels because the entire game executes faster. I will be happy to answer any questions that may arise. Have fun!

(Questions about this program may be directed to Mr. Dash at 1490 Golden Bell Ct., Downers Grove, IL 60515, 312-960-0428. Please enclose an SASE when writing.) □

The Coco Greeting Card Designer

The Coco Greeting Card Designer can be used to design and print custom Greeting Cards for all occasions including: Valentine's Day, Birthdays, Mother's Day and more

It's easy to use and includes a library of predrawn Hi-Res Graphic Pictures! You can write custom messages on the cover and inside your cards in a selection of character fonts and sizes. An easy to use editor allows you to pick your type style, font size, and more. Two fonts and a selection of custom border patterns are included, and the easy to use editors allow you to create many more!

The Coco Greeting Card Designer requires a Coco or Coco II with a minimum of 32k, One Disk Drive (Disk Ext BASIC 1.0/1.1, ADOS, or JODS). Some of the printers that the Greeting Card Designer supports are: EPSON RX/FX, GEMINI 10X or SG-10, C-ITOH 8510, DMP-100/105/400/430, SEIKOSHA GP-100/250, LEGEND 808 and GORILLA BANANA. Send an SASE for current list of other compatible printers. See Review in April 86 Rainbow . . .

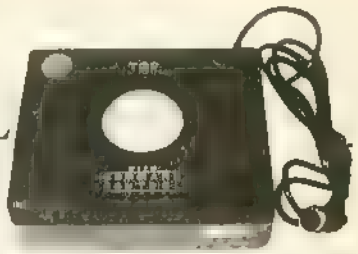
Price $19.95

WICO TRACKBALL
Now $19.95
(Was $69.95)



You can benefit from our recent purchase of brand new WICO Trackball Controllers at closeout prices. This model was designed specifically for the Radio Shack Color Computer and plugs right into the joystick port.

WICO is the largest designer and manufacturer of control devices for the commercial arcade video games. If you've ever played an arcade video game, chances are you've used a WICO joystick or trackball. You've experienced the superior control. The pinpoint firing accuracy. The exceptional durability.

Includes one-year limited warranty. Phenolic ball offers 360-degree movement. Two optical encoders provide split-second response. Quick-action fire button for smooth, two handed arcade response and feel. Long 5' computer connection. Heavy duty plastic case for long hard use. Compatible with all color computer models.

ORDERING INSTRUCTIONS: Specify CAT# C331. Include $19.95 per trackball plus $3.00 for S&H. UPS COD Add $3.00, VISA/MC Accepted. NY Residents add sales tax.

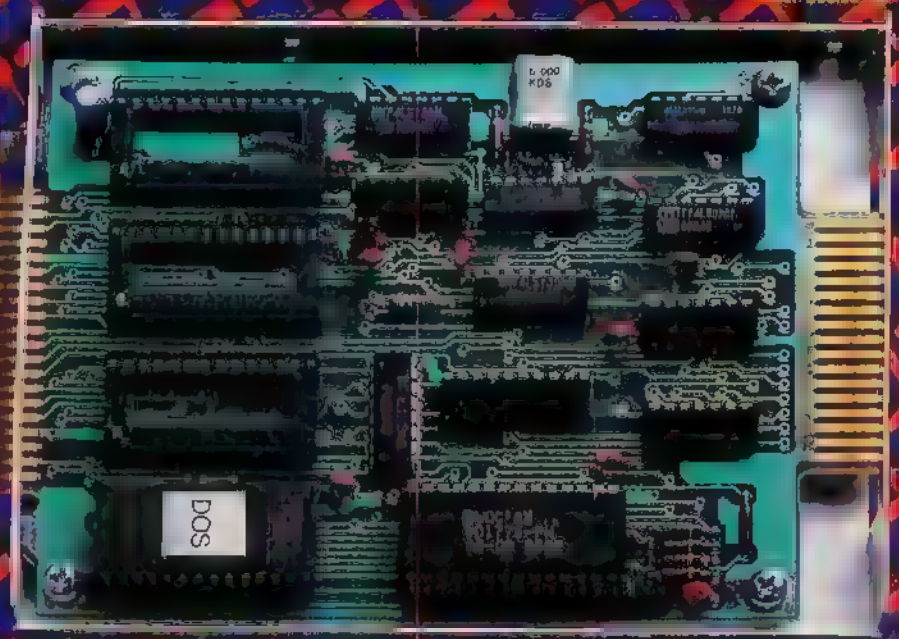
DISTO
SUPER CONTROLLER

RAINBOW



FEATURES:
- Gold contacts on all connectors.
- Shielded metal box for low RF noise.
- 4 28-pin sockets for software expandability.
- Uses 2764 or 27128 EPROMS.
- EPROMS are software selectable.
- Internal Mini-Expansion Bus interface for:
  - 80 Columns
  - Real Time Clock and/or
  - Parallel Printer or
  - EPROM Programmer or
  - User Projects.
- Complete Radio Shack compatibility.
- New technology, no adjustments needed.
- Very Accurate 16mhz High Speed Master Clock.
- Needs + 5 volts only, works on all COCOs or COCO IIs.

EXPANSION ADD-ONS:
There are currently four add-ons available from DISTO for this controller.

PPRINT
The first is a Centronics compatible Parallel Printer adapter. This adapter will allow you to connect a Centronics compatible printer directly to your controller, leaving the serial port of your computer free for your modem. Printer driver software included.

RTIME
The second is a Real Time Clock. This is a clock chip that will keep the proper time, date and year. A small battery keeps the time when the Computer is off, retreive and set the time by using simple Basic POKES. Also available with the Real Time Clock is the optional Centronics Compatible Parallel Printer adapter. Software to set the clock and printer driver included.

MPROM
The third is a Mini EPROM Programmer. Yes, a low cost programmer that attaches to the disk controller. A must for the DISTO Super Controller. Program those often used utilities into EPROM and plug them directly into your controller. Will program 2764's or 27128's, a perfect mate for the DISTO Super Controller.

DISPLAY80
The fourth is a real knock-out. This is a three in one card. Its major function is to add an 80 * 24 display to your computer. A feature packed package also includes RTIME and PPRINT. All in one neat package that fits inside the controller. OS9 software available. Call for more information.

CREDITS:
The DISTO Super Controller, add-ons and all its documentation are conceived and designed by Tony DiStefano. The DISTO Super Controller and add-ons are manufactured and distributed by: C.R.C. COMPUTER INC. 14802 Lajeunesse, Montréal, Québec, Canada, H3L 2E8 (514-383-[illegible])

Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary explaining how the program works. Generally, we're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should *so state* when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submissions Editor, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not submit programs or articles currently submitted to another publication.

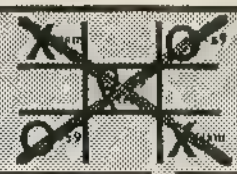
XTEAM & OS-9



BOTH WINNERS

XTERM
OS-9 Communications program.

- Menu oriented
- Upload/download. Ascii or XMODEM protocol
- Execute OS-9 commands from within XTERM
- Definable macro keys
- Works with standard serial port, RS232 PAK, or PBJ 2SP Pack, Includes all drivers.
- Works with standard screen. XSCREEN, or WORDPAK 80 column board.

$49.95 with source **$89.95**

XMENU
Creates a menu driven environment for OS-9.

- Create your own menus
- Works with standard screen, XSCREEN, WORDPAK, O-PAK

$29.95 with source **$59.95**

XSCREEN
OS-9 hi-res screen

- 51/64/85 chars per line
- Easy menu operation

$19.95 with source **$39.95**

XDIR & XCAL

Hierarchial directory
- Full sorting
- Complete pattern matching

OS-9 calculator
- Decimal, Hex, Binary
- +, -, *, /, AND,OR, XOR, NOT

$24.95 with source **$49.95**

XDIS
OS-9 disassembler

$34.95 with source **$54.95**

XWORD
OS-9 word processing system

- Works with standard text screen, XSCREEN, WORDPAK, or O-PAK
- True character oriented full screen editing
- Full block commands
- Find and Replace commands
- Execute OS-9 commands from within
- Proportional spacing supported
- Full printer control, character size, emphasized, italics, overstrike, underline, super/sub-scripts
- 10 header/footers
- Page numbering in decimal or Roman numerals
- Margins and headers can be set different for even and odd pages

$69.95 with source **$124.95**

XMERGE
Mail merge capabilities for XWORD

$24.95 with source **$49.95**

XSPELL
OS-9 spelling checker, with 20000 and 40000 word dictionaries

$39.95

XTRIO
XWORD/XMERGE/XSPELL

$114.95 with XWORD/XMERGE source **$199.95**

XED
OS-9 full screen editor

$39.95 with source **$79.95**

AND FOR RS DOS ...

SMALL BUSINESS ACCOUNTING

This sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List. **$79.95**

INVENTORY CONTROL/SALES ANALYSIS

This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory. **$59.95**

PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions Suited for use in all states except Oklahoma and Delaware. **$59.95**

These programs are user friendly and menu driven. Sample transactions are included Each package features a hi-res screen. Each requires a printer, a minimum of 32k and at least 1 disk drive.

ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package. **$59.95**

ACCOUNTS PAYABLE

Designed for the maintenance of vendor and A/P invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid A/P invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package. **$59.95**

MICROTECH CONSULTANTS INC.

Use this program to design Escher-type graphics

Esch-A-Sketch

By Eric White

"No one can draw a line that is not a boundary line; every line splits a singularity into a plurality. Every closed contour, no matter what its shape, whether a perfect circle or an irregular random form, evokes in addition the notions of 'inside' and 'outside' and the suggestion of 'near' and 'far away', of 'object' and 'background'."

M.C. Escher

I have always been a great fan of M.C. Escher and his self-perpetuating patterns. Escher had the unique ability to blend shape and form with perfect balance. From his drawings, one feels a sense of complete unity and purpose of form.

In a search for techniques to create Escher-type designs I tried many standard graphic techniques such as tracing paper and pencil, but had little success. When drawing a self-perpetuating pattern, each line creates both an "inside" and "outside" border simultaneously. This can get quite frustrating as you try to keep the subject recognizable. Needless to say this technique was time consuming and tedious.

The main challenge is to draw both sides of the subject at the same time. The computer is the perfect medium to attempt to solve this problem. Listing 1 is a short version of *Escher.bas* and accepts X-Pad, Joystick or Hi-Res pak for input. Type in the program and save it before trying to use it.

You need to edit Line 440 with the appropriate device number. This value is stored in the variable DV. For the X-Pad use a value of 1 (this is the default). If you want to use a Hi-Res pak, use a value of 2. Those using the standard joystick port input need to set DV equal to 3. Edit in the appropriate value before running the program in Listing 1.

Listing 2 is a DMP-200 graphics print program for use with pictures created with *Escher.bas*. This program prints a full 8-by-10.5 inch swatch of your patterns.

I have learned a lot in experimenting with Escher's world. I can't help but wonder what he would have done next if he had the use of todays microcomputers to continue his work. □

The Handicappers!

The Pros

Tired of wrestling with Sunday point spreads? Let your Color Computer do it for you! Pigskin Predictions, the best-selling NFL handicapper, is ready for 1985. Spend a few minutes typing in scores each week, and here's what it will do.

- Menu-driven selection of schedules, ratings, division races, predictions or results by team or week. Seven different reports available
- Easy once-a-week entry of scores–no complex, meaningless stats
- Predicts scores of all games for remainder of season each week!
- Calculates projected won-lost records for all weeks
- Maintains home field advantage and power ratings for all teams.
- 1985 schedule data file included free
- 32/64K enhanced version features dazzling Rainbow Writer Screen display. Seeing is believing! Standard 16K version included, too.
- You'll be amazed at the power of this program. 16/32K ECB required (32K for disk). Only $39.95 on tape or disk. 1985 Data tape or disk for previous owners, just $13.95

College

After two years of searching, we've finally found a college football handicapper! We think it's a winner! The Lockmaster® maintains stats on 105 major college teams, analyzes the local point-spread, and rates the game as a betting proposition. Why waste your efforts on games with marginal chances of success, when you can get your Color Computer to pick the games that are most likely to make you a winner?

To use the program, all you need are the College Football ratings that appear each week in USA Today. You can run individual games (including bowl games), update team stats and customize each game's rating with critical information such as coaching and quarterback changes and injuries to key players.

Using the weekly stats and our mathematical formula (which includes schedule difficulty, power ratings, offense and defense), The Lockmaster rates each game against the current point spread and tells you how sure the bet is.

The Lockmaster is easy to use and menu driven. It includes complete instructions and data file for 105 major college teams. 32K/64K Disk only. Just $39.95.

Thoroughbred, Harness, Greyhound

Use your **Color Computer** to improve your performance at the track! These 16K programs for **Thoroughbred, Harness** and **Greyhound** racing rank the horses or dogs in each race quickly and easily, even if you've never handicapped before. All the information you need is readily available from the Racing form, harness or dog track program. We even provide diagrams showing you where to find each item!

Thoroughbred factors include speed, distance, past performance, weight, class, jockey's record, beaten favorite and post position. **Harness factors** include speed, post position, driver's record, breaking tendencies, class, parked-out signs and beaten favorite. **Greyhound factors** include speed, past performance, maneuvering ability, favorite box, class, kennel record, beaten favorite and breaking ability.

We include complete instructions and a wagering guide that tells you which races to bet and hwich to avoid—one of the real secrets of good handicapping. You can buy a more expensive handicapper, but we don't think you can buy a better one! **Thoroughbred, Harness** or **Greyhound Handicapper,** $39.95 each on tape or disk. Any two for $59.95 or all three for $74.95

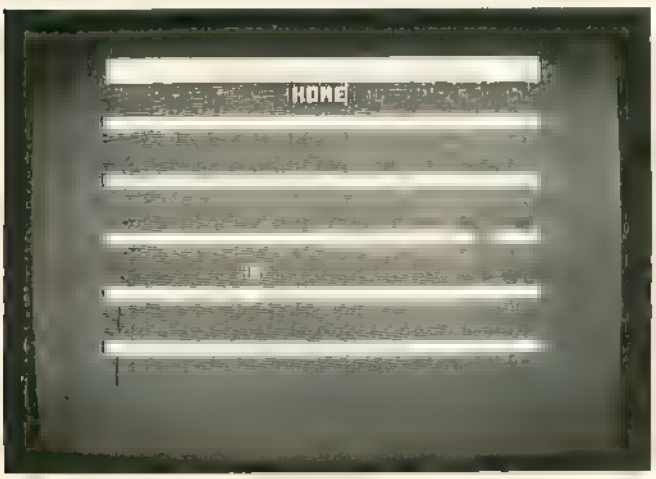
Mastering the Gates

By Keiran Kenny

This short game called *Gates* is not intended for sizzling zappers of cosmic creeps, but for those who lack the speed and dexterity needed to qualify as the fastest laser in the western galaxy.

The screen shows five equally spaced fences. You are the yellow spot at the bottom center of the screen and must pass through the gates in all five fences in order to reach home. The gates open and close at random and you never know when a gate will open, or stay open long enough to pass through.



When a gate opens in a fence, press the left- or right-arrow key to move in the required direction, then press the up-arrow key before the gate disappears and you will pass through and gain 20 points. If the gate slams shut, you bounce back and lose 10 points. *Gates* begins with an initial bonus score of 500, which should be enough to keep the score at a positive value.

Laying Down the Chips

By Bill Bernico

At one time or another, most everyone has played bingo. It's one person's job to pick the little bingo chips from a revolving drum and call out the numbers. In the professional version, a plexiglass tank with 75 blowing ping pong balls is used. One ball at a time randomly pops up to the top as the next bingo number to be called. The following program, *Automatic Bingo Caller*, simulates this machine. It's not a bingo game but it randomly calls all of the 75 bingo numbers one at a time without duplication.

Upon running the program two lines are displayed at the top of the screen. The first line displays the numbers already called. The second line tells you how many numbers have not been called. Pressing 'C' picks the next number; 'B' and the game pauses so a player's card may be checked for a correct bingo; and 'N' starts a new game. If it turns out that a player did not have a bingo, pressing 'R' resumes that particular game. That's all there is to it!

Fly Off the Handle

By Archor Wright

The following program, *Simple Flight Simulator* demonstrates the basics of flight. It takes a while to be able to totally control the jet. The vertical movement of the right joystick controls the right half of the horizon and horizontal movement controls the left half of the horizon.

You can practice forever because the CoCo jet never runs out of fuel!

AWARENESS | 16K ECB

Calling to Mind

By David Huang

Repeat It is a game that requires a good memory. Four squares, along with the title and score, appear on the screen. Press any key to start the game and a square lights up with a short "beep." You must then press the number (1-4) corresponding to that square. If the computer's sequence is repeated correctly, the score increments by one and another square is added to the sequence. The sequence will be replayed by pressing the 'R' key. If a key is pressed that does not correspond to the square in sequence, the game ends.

The object of the game is to repeat as many sequences as possible to obtain a high score. Exceeding a score of 10 without replaying any sequence indicates great memorization.

Enjoy!

PROGRAMMING UTILITY	16K ECB MOD.	32K ECB

Break Key Disable

By Eric Harrison

The following program should be particularly useful in games and educational programs written for small children. It first disables the BREAK key, then places a machine language keyboard routine in memory. To call the program use a GOSUB 50000 and then copy the variable ZZ$ to whatever variable you want to use. This can be done with a simple assignment statement. To allow entry of a numeric variable, use VAL(ZZ$) and assign this to the appropriate variable.

Note that the BREAK key will work until Line 2 is executed. Also, the BREAK key is not disabled while in the direct command entry mode. This is to allow for editing of programs.

As written, the program requires 32K Extended Color BASIC but can be altered to run on a 16K ECB system as follows:

1) In Line 3 change the FOR loop values from &H7F00 to &H3F00 and &H7F0C to &H3F0C.

2) Change the CLEAR statement in Line 1 to CLEAR 600,&H3EFF.

3) In Line 3 change the DEFUSR statement to DEFUSR0=&H3F00.

The lisitng: BREAKDIS

```

LOGIC | 16K ECB

Masonry Madness

By Andy Blount

Bricks is a Lo-Res puzzle-type game in which you must move a stack of bricks from one side to another. All of the bricks are different sizes and are represented by Xs. Only one brick can be moved at a time and large bricks can't be stacked on smaller ones.

To play the game use the left- and right-arrow keys to move the 'G' and 'P' across the top of the screen. The 'G' represents getting a brick and the 'P' represents placing a brick. To get or place a brick press ENTER and it disappears or appears, if the move is not illegal. The score is tallied by how many moves have been made; the lower the better.

WE'VE OUTDONE OURSELVES!

DS-69A DIGISECTOR™
THE VIDEO DIGITIZER NOBODY CAN BEAT!

NEW

The DS-69A is the best video digitizer available for your COCO at any price. This new, turbocharged version of our original DS-69 Digisector allows your 64K COCO to see clearly into the world of any television picture.

SPEED!	The fastest — 8 images per second!
PRECISION!	The highest — 64 levels of true grey scale!
RESOLUTION!	The finest — 256 × 256 picture elements!
Compatibility	Use with a black and white or color camera, a VCR or tuner.
Compactness	Self contained in a plug in Rompack.
Convenience	Use with a Y-cable, Multi-Pak, PBJ Bus or plug directly into the cartridge slot.
Ease of Use	Software on disk will get you up and running fast!

POWERFUL C-SEE™ SOFTWARE

C-SEE is the menu driven software package included with your DS-69A. Available on disk or cassette, it provides lightning fast 5 level digitizing to the screen, high precision 16 level digitizing for superb hard copy printout and simple keyboard or joystick control of brightness and contrast. Or call our driver routines from your own Basic program for easy 64 level random access digitizing. Pictures taken by the DS—69A may be saved on disk or cassette by C-SEE and then edited with COCO MAX, MAGIGRAPH or GRAPHICOM for special effects. Any of the popular printers may be used to obtain printouts of images digitized by the DS-69A.

ONE YEAR WARRANTY

DS-69A Digisector & C-SEE III Software	**$149.95**
OR your DS-69 &	**$ 59.95**
MAGIGRAPH Graphics Editor on disk	**$ 39.95**

DS-69 DIGISECTOR™
THERE'S ONLY ONE BETTER VIDEO DIGITIZER . . .

And that's the DS-69A. The DS-69 is The Micro Works' original video digitizer, tried and true since 1984. It provides almost all the features of the DS-69A and is now available at a new low price. The DS-69 features;

SLUGGISHNESS	2 images per second. Quick enough to freeze all but the fastest moving pictures.
INCOMPATIBILITY	Brightly colored scenes may be striped when using a color camera.
INCONVENIENCE	Will not work with a Y cable.

Otherwise, it's a DS-69A. Precision, resolution, compactness, ease of use, software and warranty. Except one last thing.

DS-69 Digisector & C-SEE III Software **$ 99.95**

Superb image quality produced by both Digisectors.

RAINBOW

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite micro-diversion. We want to put your best effort on record in THE RAINBOW's "Scoreboard" column. All entries must be received 60 days prior to publication. Entries should be printed — legibly — and must include your *full* name, address, game title, company name and, of course, your high score. Each individual is limited to three score entries per month. Send your entries to Scoreboard, c/o THE RAINBOW. The "Rainbow Scoreboard" is now a bimonthly feature.

For greater convenience, your high scores may also be sent to us through the MAIL section of our new Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS

SCOREBOARD POINTERS

In conjunction with THE RAINBOW's Scoreboard, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints and tips, we encourage you to share them by sending them to the Scoreboard, c/o THE RAINBOW

FEEDBACK

Scoreboard:

In response to Donald Dare's letter (May 1986) concerning *Dungeons of Daggorath*, there are five levels. The wizard is on Level 5. I have killed him (and won the game) several times.

You need the Joule and Rime rings plus a certain sword and shield. Those two rings must be "incanted" into their magic forms, though. A dictionary is most helpful!

When you kill the "real" wizard, get his ring, then "incant" it.

Also, in *Pyramid* from Radio Shack, I can only get a few treasures and have found 10 or so rooms. I always get lost in the maze. I found the vending machine, but ended up lost — then dead. Send any help to the "Scoreboard."

Dale Lampe
Sacramento, CA

Scoreboard:

In response to Michael Fischer's letter (May 1986) concerning *Hitchhiker's Guide to the Galaxy*, you also take the toothbrush from Earth. Although you don't always need it, you're better safe than sorry!

You cannot get past the screening door until you're near the end of the game. You should be *very* persistent in going to the Engine Room. Bring the plotter, generator and the Advanced Tea Substitute to the bridge. PUT BIT IN ATS, PUT SMALL PLUG IN SMALL RECEPTACLE, TURN ON DRIVE and off you go. If you want the improbability generator to work on the whole ship, then put the large plug in the large receptacle.

Billy Harris
Beaumont, TX

Scoreboard.

Concerning Peter Thorpe's letter (May 1986), I have some advice. First, jump in the back of the jeep and go north. To get out of the mine, go N, E, N, E, S, E and E. I assume you know about the translator in the logging camp.

I did get across the river, but only once.

There are some things I was wondering. How do you get the children home? How do you cross the river? And finally, what do you need to complete Chapter One? Send any responses to the "Scoreboard."

Dean Wagner
Avon Lake, OH

AUTOPILOT MODE

Scoreboard:

I have a few tips to pass along to anyone who uses *Flight Simulator I* by Radio Shack. The simulator will land itself in

autopilot mode if you set the altitude for zero feet. It will also take off in autopilot if you let the plane reach takeoff speed (160-200), then engage the autopilot.

John L. Whitaker
Hamilton, OH

KEEP YOUR GUARD UP

Scoreboard:

For those who have *Knock Out* by Diecom and are having trouble getting to the champ, this might help.

When starting out with Canvas Kid, put your guard up and wait for him to move slightly, then punch left. You should be able to hit the first guy four times, then wait until he moves again and let him have it four more times with a left punch. You should do this to all boxers except the champ. Remember, though, the higher the rank of the boxer, the less number of times you can hit him.

Phil Levesque
Lewiston, ME

ADVICE FROM THE DEAD

Scoreboard.

In three days I have solved *Dragon Blade* and would like to offer some tips. Although typing "help" in most places only gets you a meaningless response, in two places (both concerning water) it can be very helpful.

To get past the first door you have to follow the advice of the dead man and get your hands dirty. Type REST when you reach a restful place.

Throwing a rock at the right place keeps you from getting killed.

In order to get past the stone door, you have to search one other room very carefully.

I do need help on two other Adventures. First, how do you get past the second spider in *Trekboer*? Second, in my *To Preserve Quandic* hint sheet, it tells me to call Kendall when I'm trapped in the room with the keys. But, when I call him he tells me that I'm not in a desperate situation and he won't help. How do I get past this?

Eric Crichlow
Las Vegas, NV

POTPOURRI

Scoreboard.

I am a new reader of this magazine and I want to give some hints.

In *Offender*, always "look" at the top little section instead of the big principal section. By looking at the small section, the game is easier and you will make hundreds of points.

In *Pooyan* (rounds two and four), don't wait for the wolves to come up, or the "thing" on top of you to fall on your head when there are too many wolves on the tree. Instead, start shooting at the coming balloons (with no wolves). Doing this gets you more points.

In *Flight Simulator I*, if you go north from Airport 0, you will find the Tandy Corp. logo picture and by flying north from Airport 2 you will find an 'N' and an arrow showing where the north is. Later, you can find words saying "Flightsim I." By flying east from Airport 0 you will also find the words "Flightsim I" and by flying east from Airport 2 you will find Airport 4 and an 'N' with an arrow telling where north is. Just before you run out of fuel, you will find two mountains with a lake and a river between them.

In *Cashman*, when there are no cats, go up and get all the bombs that are being thrown.

I need help with Section 41 of *Cashman* and Section 3 in *Poltergeist*.

I also need help with *Adventure in Wonderland*, *Dungeons of Daggorath* and *Sands of Egypt*. Send any help to the "Scoreboard."

Jorge De Albertis
Lima, Peru

HOT STUFF

Scoreboard:

I need help with the Adventure game *Trekboer*. It is the first graphics Adventure I've bought and I can't seem to get past the stream of lava to get to the grating on the other side. If anyone can help me please write to the "Scoreboard."

Alvin Cotton Jr.
Fayetteville, NC

TIMELY TIP

Scoreboard:

Many thanks to David Rodriguez's letter (May 1986) about *Dallas Quest*. I had the same problem Jon Olson had. Now that I've gotten through that, I need help getting past the cannibals and into the cave. How do I do this? Any help will be appreciated.

Arne Peterson
Lake City, FL

TRAPPED IN THE COCO ZONE

Scoreboard:

Can anyone help me with Bruce Bell's *CoCo Zone*? (Appeared in RAINBOW, April 1986.) I can't seem to get past the spider and web.

Kim O'Brien
Crestview, FL

Editor's Note: To escape the tangled web she weaves, a shiny piece of jewelry is what you should leave. Before you arrive though, you'd better take heed, something else shiny, you will also need.

To respond to other readers' inquiries and requests for assistance, reply to "Scoreboard Pointers," c/o THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We will immediately forward your letter to the original respondent and, just as importantly, we'll share your reply with all "Scoreboard" readers in an upcoming issue.

For greater convenience, "Scoreboard Pointers" and requests for assistance may also be sent to us through the MAIL section of our new Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS. Be sure to include your complete name and address.

— Debbie Hartley

How Does the CoCo Stack Up?

By William Barden, Jr.

So you plunked down $69.95 and bought a Color Computer on sale and now you're wondering what you've gotten into, eh? Or maybe you've had a Color Computer for a while and you're wondering how the Color Computer stacks up against other computers in the news. Whether you're a new CoCo owner or an old hand, every once in a while I think it's a good idea that we stand back and assess ourselves and our equipment. Just how does the CoCo compare to systems like the Commodore 64, IBM PC*jr*, Macintosh, Atari ST and others? This is not a task for the average CoCo freak — he's simply too chauvinistic, too enthralled with the system for which he spent hard-earned money. I'm also biased, but I think I can separate my bias from the facts. I've been in all types of computing since 1965 — everything from mainframes to micros. Currently I have a Radio Shack TRS-80 Model I, TRS-80 Model II, TRS-80 Model 4, two Color Computers, a Tandy 1000, a Tandy 2000, an IBM PC, an IBM PC*jr*, a Commodore 64 and assorted other smaller computers, like the little-known Timex 2068. Want a perspective about your machine? I think I can do an unbiased job.

Eight Bits, Sixteen Bits, and More

Computer science students love to beat each other over the head with their computer systems the same way they do with automobiles. "My Chevy can take your Ford!" has turned into "My Mac can run rings around your CoCo!" and other insults. When I'm asked what system I have at home, I tell them a Cray X-MP. Since this is a ten million dollar supercomputer, it shuts them up for a while.

Whether you have a CoCo or Cray, though, one of the ways computers are compared is by the size of data processed by the microprocessor inside the

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years experience in the industry covers a wide background: programming, systems analyzing and managing projects ranging from mainframes to microcomputers.

machine. Our Color Computers have a 6809 microprocessor, which handles data in 8-bit chunks. (A bit, or binary digit, can hold one piece of information, a yes/no or 0/1 piece of data.)

The 8088 microprocessor used in the IBM PC, PC*jr*, and Tandy 1000, among others, is widely touted as a 16-bit microprocessor, but is really an 8-bitter like the 6809. Both the 6809 and 8088 can perform some 16-bit operations, but move data between memory and central processing unit eight bits at a time. The microprocessor used in the Tandy 3000 and IBM AT is a true 16-bit microprocessor, an 80286.

Many other microcomputers use older microprocessors than the 6809 — the Apple II series and Commodore VIC-20 or 64, for example, use a 6502 microprocessor, decidedly an 8-bitter. The Apple Macintosh uses a newer 16-bit microprocessor, a 68000, as does the Atari ST line and the Amiga.

So that puts the Color Computer on a par with the microprocessor used in the Tandy 1000, IBM PC and PC*jr* — about midrange in today's market. The question is, is a 16-bit microprocessor twice as good as an 8-bitter? The answer is not at all. Given a choice between a 16-bitter and an 8-bitter, I'd take the 16-bitter, but I wouldn't expect it to do the job twice as fast. If you've ever seen some of the early Macintosh word processing applications, you'd wonder how such a fast microprocessor can operate so slowly. More important than the microprocessor size is how the system is put together as an entire package — hardware design, software design, operating system and so forth.

To sum it all up, let's give the Color Computer a seven out of a possible 10 for the microprocessor.

The More Memory the Better?

The Color Computer has a maximum memory limit of 65,536 bytes, each byte capable of holding one character of data, or about one BASIC keyword. Not all of this memory is available for user program storage, though. Normally, about half of the memory holds the BASIC interpreter. The remaining 32,768 bytes is an enormous amount of memory compared to minicomputer systems of the 1960s, many of which used only 8,192 bytes to run their programs. However, the 32K (K standing for 1,024) bytes does pale in comparison to the 640K bytes available on the Tandy 1000, IBM PC, and PC*jr*, and the millions of bytes available on more recent systems such as the IBM AT and Tandy 3000. How much memory is really needed?

It really depends upon the task, but generally, the more memory, the better. Part of the reason people clamor so much for additional memory is that applications software packages like Lotus 1-2-3 are memory hogs — they require hundreds of thousands of bytes to run. However, there are many other packages that do not require such huge amounts of memory. Perhaps 90 percent of all software programs will run in a 32K byte system.

Systems like the Commodore 64 and Apple II series have about the same amounts of memory as the Color Computer. However, there's no question that this is one area in which the Color Computer could stand some beefing up. If a new Color Computer is released, we'll certainly see additional memory as an option, perhaps as much as 512K. In the meantime, the Color Computer can run virtually any application, due to the large amounts of software packages available from Radio Shack and outside vendors.

"More important than the microprocessor size is how the system is put together as an entire package — hardware design, software design, operating system and so forth."

Because the Color Computer could use more memory, we'll give the CoCo a three out of a possible 10 on memory.

Good Graphics

One of the nicest things about the Color Computer is its graphics — a maximum of 256 pixels, or dots, per

horizontal row by 192 pixels per vertical column, making a total of 49,152 separate dots on the screen, each of which can be one of two colors. Another mode allows 128 by 192 dots in four colors. How does this compare to other systems? At the top of the line is the Commodore Amiga, which has a maximum of 640 by 400 pixels in 16 colors. Next is the Tandy 2000 with 640 by 400 pixels in eight colors. The Atari ST is in this 640 by 400 range. The Enhanced Graphics Adapter of the IBM PC allows 640 by 350 pixels in 16 colors. The Apple II series allows 560 by 192 pixels in 16 colors. The standard IBM PC*jr* is next. The PC*jr* graphics is virtually identical to the Tandy 1000 — 640 by 200 pixels in four colors. The Apple Macintosh has 512 by 342 pixels, but only in black and white. At the bottom of the range are machines like the Atari 1200 series with 320 by 193 pixels and older machines with even less resolution. The Color Computer is in this last category.

You can see that the Color Computer is marginal as far as graphics goes — newer machines are tending towards better and better graphics. Of course, to get the better graphics, you need an expensive color monitor at perhaps $400 extra over the cost of the system. Then there's the fact that 640 by 400 pixels in 16 colors requires a megabyte(!) of memory and a great deal of time to process. The result is a very slow screen update. With 128 by 192 four-color and 256 by 192 two color graphics, Color Computer screen updates can be done rapidly, and you don't need huge amounts of memory to store additional screen pages.

Again, though, I'd have to say that the more screen resolution, the better, even if the full capability of the system isn't realized. Let's give the Color Computer four out of 10 on graphics.

"One-and-a-half million users can't be too far wrong — let's give the Color Computer a nine out of 10 for the user base."

Languages

Most computers have a built-in BASIC language capability — the IBM PC and PC*jr* do, as does the Color Computer. The interesting thing about BASIC is that most versions of it have been programmed by Microsoft, a software company in Bellevue, Washington that got in on the ground floor of microcomputers and has remained a major market force. As a result, Color Computer BASIC (including Extended BASIC) is remarkably like the PC and PC*jr* BASIC in many respects. The LINE, CIRCLE, and other graphics commands are virtually identical to those used on the IBM PC/PC*jr*. Color Computer BASIC is therefore a strong BASIC that is much more of a standard than BASICs such as Applesoft BASIC or Commodore BASIC.

Currently, the most popular computer languages are BASIC, PASCAL, C, FORTRAN, COBOL and assembly language. All of these are available on the Color Computer via the OS-9 Operating system. OS-9, of course, doesn't come with the system. It's a fairly inexpensive option, however, and you can pick the language or languages you require. The IBM PC and PC*jr* also have all languages available for them, but many of the other systems, especially the newer ones, may not have certain languages. Assembly language is generally available on all systems — I've mentioned the *EDTASM+* product — and other assembler programs are available for the Color Computer as well. Assembly language is a difficult language in which to program, but it produces extremely fast programs.

As far as languages, therefore, I'd have to give the Color Computer a nine on a scale of 10; just about everything you'd want is available, although you do have to use the OS-9 operating system in some cases.

Operating Systems

An operating system controls system resources such as printers and disk drives and it acts as an overseer to control all system operations. Although Disk BASIC is called Disk BASIC, there are many functions in BASIC that would properly belong in the operating system realm; commands like DIR, KILL and LOADM. The intent of Radio Shack was to make a simple operating system, and they succeeded very well — the Disk BASIC operating system commands include most of the common things you'd want to do with any operating system.

In addition to Disk BASIC there's the sophistication of OS-9. OS-9 is a Color Computer form of the Unix operating system, an operating system developed by Bell Telephone Labs and touted as one of the best around. Personally, I'm less enthusiastic than most about OS-9 and Unix. It's sophisticated and versatile, to be sure, but it's not very friendly and hard for the beginner to use. However, I would rank OS-9 above such operating systems as the MS-DOS used on the IBM series and Tandy 1000, 1200, 200 and 3000.

Without OS-9, I'd have to give the Color Computer four out of a possible 10; with OS-9, it gets an eight — one point is taken off because of OS-9's complexity.

The CoCo User Base

It's funny how you can have an exciting computer, but if the system doesn't take off, nobody develops software for it, potential buyers lament the lack of software and delay their purchase or buy another system, and the product may fail. This was the case for many computers over the last ten years or so — computers such as the Timex 2068 and Coleco Adam. One current product for which this may be happening is the Commodore Amiga, which seems a little expensive for the impressive graphics possible on the system.

The base of users for the system, then is very important. It takes sales of hundreds of thousands of systems before the snowball effect works the other way, inducing more and more people to develop software for the system, design system add-ons and produce other related products. Current estimates of sales for the Color Computer are about 1.5 million units! That's not a bad figure, to say the least. For contrast, the IBM PC is one of the best selling computers of all time, certainly in the millions of units. The Commodore 64

ınd VIC-20 have also sold millions. The Apple MacIntosh has probably sold in he high hundreds of thousands. The BM PC*jr* has sold in the low hundreds of thousands. Systems such as the Coleco Adam or Timex 2068 have sold only tens of thousands. The Color Computer, then, is toward the high end of sales compared to other systems, but s not the all-time best selling small computer.

With 1.5 million units, however, the CoCo has a plethora of hardware and software products. I'll just mention a few that have blown my socks off. There's *CoCoMax*, a terrific color graphics/mouse program which rivals the Macintosh MacDraw, but in color! There's *EDTASM+*, one of the best assemblers on the market today in terms of interaction with the user and integrating editing, assembling, and debugging facilities. There's OS-9, the professional Operating System for the Color Computer which enables several tasks to be run concurrently on the CoCo and provides more than enough power for even a jaded mainframe user. However, there are a lot of small products too, ranging from the Y cables sold by Spectrum Projects to the neat games of MichTron. The point is, there's a huge user base and a full spectrum of products to support the computer, which you certainly will not find in systems which haven't made the grade.

One-and-a-half million users can't be too far wrong — let's give the Color Computer a nine out of 10 for the user base

Cost

This is a subject dear to everyone's heart and probably is the biggest single factor in a small computer purchase. At the RAINBOWfest in Palo Alto earlier this year I saw 16K Extended BASIC Color Computers going for $59.95! Those types of prices make the Color Computer a tough system to beat. Another decided plus in favor of the Color Computer is that the system is modular — you can start off with the basic box and then add disk drives and other equipment as you require.

Figuring an Extended Color Computer with a single disk drive, 64K of memory, and color television monitor, the best current price would be about $600. The Atari ST with monitor is about $700. A Tandy 1000, an excellent buy, can be purchased for about $1000 with color monitor. The Commodore Amiga with monitor is about $1400. An IBM PC with a single drive and color monitor is about $1800. The Color Computer, then, is not as dramatically different as you might expect when it comes to price, but it sure is an easy system on which to start off inexpensively, and one that will grow with you.

However, there's another factor in price. Lotus 1-2-3 for the IBM PC costs $300. The Microsoft C compiler for the PC costs $250. Contrast this with the $29.95 for Radio Shack's "Spectaculator" and $99.95 for the OS-9 C compiler on the Color Computer. Just walk through the aisles of any RAINBOWfest to see how inexpensive hardware and software for the Color Computer is.

Let's give the Color Computer a seven out of 10 on the basis of its bargain prices for an overall system and inexpensive hardware and software add-ons.

To Sum It All Up

At this point we can tabulate the different categories we discussed above. A lot of this, I admit, is somewhat subjective, but I've tried to be unbiased. Here's the scorecard:

Microprocessor	7 out of 10
Memory	3 out of 10
Graphics	4 out of 10
Languages	9 out of 10
Operating System	8 out of 10
User Base	9 out of 10
Cost	7 out of 10

Obviously simply adding up these counts won't give you an absolute figure on how the Color Computer stacks up against the competition. The biggest reason for this is that the criteria above must be "weighted." With some users, cost is a very important factor, with others, the difference between a $3000 Tandy 3000 system and an $600 Color Computer system is no problem at all. Other people run only Lotus 1-2-3 and would like huge amounts of memory for their spreadsheets. Still other owners are into languages such as C and assembly language and want a system that runs their favorite compiler in a friendly environment. Other users want a system with good, inexpensive graphics games for their kids. I'll leave it up to you to determine your own needs and how much weight you'd like to give each factor.

"Do I like the Color Computer? Somehow it exudes a user friendliness my IBM PC just can't compete with."

From the comparisons above, though, I think it's fair to draw the following conclusions: the Color Computer is an inexpensive system with inexpensive software and hardware add-ons. The system uses a fairly recent microprocessor that provides adequate computing power. Memory is limited, but large enough to run most applications. While the graphics don't match the graphics of newer systems, they are adequate for most applications and games. The Color Computer has a wide range of languages, a good basic operating system, and a harder-to-use, but powerful, advanced operating system. It's user base guarantees good support from the manufacturer and developers of hardware and software products.

And now for my personal, strictly biased opinion: Do I like the Color Computer? Somehow it exudes a user friendliness my IBM PC just can't compete with. I like the classic lines of the instruction set of the 6809 microprocessor. I even, believe it or not, like the feel of the keyboard. When I see the graphics on such programs as *Sands of Egypt* or *CoCoMax*, I forget that the resolution isn't quite as good as a Tandy 1000. I especially like wandering down those aisles at RAINBOWfests, picking up fantastic bargains on hardware and software. The CoCo will be around for a while in my computing room and I hope in yours as well.

Exploring the Card Catalog

By Steve Blyn
Rainbow Contributing Editor

It is never too early to begin building good library skills. Many public libraries have story hours for children, beginning with the preschool set. There are many skills needed to be able to use libraries to their fullest extent. Children in the elementary grades need continued instruction and guidance in the use of their classroom and school library facilities.

The school librarian or classroom teacher usually helps individuals and groups to select books or to find books related to a particular topic or problem. She sets aside periods in which she tells a story, introduces children to new books and acquaints them with the library setup. She also explains and demonstrates the use of the card catalog.

By the end of the fifth or sixth grade, most students are thoroughly familiar with the organization of the school library. They understand classification of books and library arrangement, use of encyclopedia or reference book letter keys, reference guides, card catalogs and the use of a variety of reference books. These reference books include encyclopedias, atlases, almanacs, yearbooks, telephone directories and newspapers. The students often collect and organize materials for class assignments or their own class library.

One skill we feel dominates library use is the card catalog. The ability to properly use it often determines if one can locate the proper material one needs. Some libraries are now using methods other than the traditional card catalog. The newer methods usually are less expensive to the library. Whatever the system, the material it contains is similar.

This month's program will help familiarize students with the information contained on cards from a typical card catalog. An illustration of a typical card is shown. The student is asked to locate the author's last name, the title, the publisher and the number of pages.

Lines 30 and 40 set the dimensions for the number of cards. Lines 50 through 70 read the cards' information from the DATA lines. Lines 80 through 300 ask the questions about the four pieces of information we are looking for. If the answer is correct, a pleasant tune is heard. If incorrect, the correct answer is inserted in the proper place.

The DATA lines contain the cards' contents. They are entered in the following manner: author's last name, author's first name, title of book, illustrator, publisher, copyright date and number of pages.

Please note there is no comma at the end of the number of pages which is the end of the DATA line. Placing a comma here is a common mistake that alters the results desired.

There are currently only five cards in our catalog. You may add an almost endless number of cards if you desire. Merely follow the DATA line pattern started by the program and shown above. Enter your DATA on lines that you create following Line 420. Be sure to adjust the value of 'N' on Line 30 to the new total amount of cards.

We, at Computer Island, hope that you will use and modify this program for your children's needs. It would be a nice experience for the children to assist you in selecting more books to include and in entering the new DATA lines. □

Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.

Telewriter-64

the Color Computer Word Processor

- **3 display formats: 51/64/85 columns × 24 lines**
- **True lower case characters**
- **User-friendly full-screen editor**
- **Right justification**
- **Easy hyphenation**
- **Drives any printer**
- **Embedded format and control codes**
- **Runs in 16K, 32K, or 64K**
- **Menu-driven disk and cassette I/O**
- **No hardware modifications required**

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk

> *one of the best programs for the Color Computer I have seen*
> - Color Computer News, Jan 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64 For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays. 64 × 24 and 85 × 24!! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPVII/VIII, DMP 100/200, Epson, Okidata, Centronics, NEC, C Itoh, Smith-Corona, Terminet, etc)

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc

Dynamic (embedded) format controls for: top, bottom and left margins, line length, lines per page, line spacing, new page, change page numbering conditional new page, enable/disable justification

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk

RAINBOW CERTIFICATION SEAL

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves Cassette auto-retry means you type a load command only once no matter where you are in the tape

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use Everything you do appears immediately on the screen in front of you Commands require only a single key or a single key plus CLEAR

> *...truly a state of the art word processor .. outstanding in every respect*
> The RAINBOW, Jan 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs $49.95 on cassette, $59 95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

To order, send check or money order to:

The 'Hidden' Computers

By Michael Plog, Ph.D.
Rainbow Contributing Editor

The education industry is comprised of much more than teachers and students. Many people work for education, but never see a classroom, or even a school. Yet, their work is important, and helps to make teachers' jobs more productive. Computers play a role for these people too, and assist in getting an educational product developed and delivered.

One example of such an educational effort is the production of educational television tapes for schools and general public. Preparation of a videotape can be a very simple affair, providing you do not mind a low-quality final product with an amateurish appearance. With a video cassette recorder and a video camera, anyone can take home movies and show them in classrooms. Production of a high-quality tape, however, is an entirely different matter.

Before videotape, preparation of an educational film could also have been a simple affair. Many people owned home movie cameras and took movies. An amateur could even edit the film by looking at each frame of the film, cutting and splicing until the edited version was more acceptable to the audience. With videotape, editing cannot be done with a sharp blade and glue. You cannot simply cut a piece of videotape and attach another piece to it. Electronic editing is required.

Another problem of video editing is school students (and members of the public such as school board members, parents, etc.) have a more sophisticated attitude toward educational video materials than in the past. The quality of the message is often measured by the quality of the medium. We have been spoiled by slick network production, not to mention Sesame Street and other professional material now available for educational use.

Editing a videotape has some similarities to editing celluloid film. A videotape has frames, much like a film has frames. On celluloid film, a single frame is one picture, one exposure of light onto the film. One frame of a videotape is a sweep of the cathode ray gun down the video screen. There are thirty such complete sweeps every second, therefore a video frame is 1/30 of a second. To edit a tape, you need to record the frames wanted onto a new tape. A blank tape is used to receive the images from other tapes. The final recording has to be in the proper sequence, even if that means going backwards on one of the raw tapes.

Every videotape contains the image plus other information. Each frame has room for 80 bits of audio information. Some of that information is used as a time code track. Each frame of video tape has a code that tells the hours, minutes, seconds and frame number. A technician can call up the exact frame of a piece of tape that is two minutes, 14 seconds, and 29 frames from the beginning.

Now we see how to edit videotape. The director can indicate the final tape should begin with the shot happening four minutes, two seconds, three frames after the start of the raw tape, go for 20 frames, then insert the shot that is one hour, eight minutes, five seconds and three frames. This process continues for the entire length of the finished product. This type of editing is much more difficult than cutting a strip of celluloid and physically inserting it at the right place.

There are companies that provide the equipment necessary for such editing. One machine is required to record the final product and, generally, more than one machine is used to provide the incoming source tape, since most people will have more than one reel of tape containing the original information.

Recently, I observed such an operation at the television section of the Illinois State Board of Education. One recording machine was connected to six source tape players. Two other input devices were used to control screen graphics. The editing process was handled by a computer, as you might well imagine. The impressive part of this educational television facility is that a Radio Shack Color Computer is the machine controlling this massive array of complex electronic video equipment. That's right — the little white box from Tandy, almost unnoticed among dials, knobs, blinking lights and huge machines, was the brains of this operation.

The Color Computer has several jobs in this facility. It must first touch and read each of the incoming tape machines and the recording machine. The

Michael Plog received his doctorate degree from the University of Illinois. He has taught social studies in high school, worked in a central office of a school district and currently is employed at the Illinois State Board of Education.

computer has to determine if the tape machine is on with a tape correctly inserted and ready to play. The computer provides commands to each of the machines to stop, get ready, play, and most crucial of all, to determine the frame position called for by the director.

The creator of this system, Mitch Hopper, loads up to six tapes, then sits at the keyboard of the Color Computer. He types in a command to record from one of the input machines, beginning at a specified location, for the required length of time. There are hundreds of such commands necessary for one final tape. Each command is also listed to a printer for later verification and tracking of the finished tape.

The computer then goes to the specified input machine, reads the time code, determines how far away (and in which direction) the requested time code is, moves the tape back and forth until it has found the correct beginning spot. The exact frame of the input tape is then noted. To further complicate matters, the electronic devices have a delayed reaction time. A tape machine cannot simply begin playing, it first has to get up to speed then start showing the signals for that frame. Each input machine has a different delay time, meaning the Color Computer has to keep these times straight for every machine.

Finally, the Color Computer must start the machine providing the incoming signal, as well as the recording machine, at exactly the correct time, so the specified frame — not one frame ahead or behind — is recorded on the final product. With thirty frames per second, the job requires the combination of high quality in computer, software and operator.

I was amazed when I found the Color Computer performing this task. I was even more amazed when the man who developed this system said he had written the entire program in BASIC. Machine language would have been faster than BASIC, but would not greatly increase actual speed, because of the time required for a human to change tapes on the machines.

The total material investment in this system was one Color Computer, a tape player for the computer (no need to use disk; the program stays in the machine), and about $250 for a Programmable Peripheral Interface box. The PP contains extra memory and the addi tional ports necessary for "talking" witl the tape machines. No monitor wa necessary, there were plenty just layin around. After all, this is a facilit devoted to video. Mr. Hopper spent si weeks programming the Color Compu ter and building the interface device.

It is possible to purchase hardwar and software specially developed fo this type of operation. Such a system t perform the tasks currently done by th Color Computer would cost abou $30,000. Of course, that does not in clude the time necessary to learn how t operate the equipment.

So, the next time you show a class videotape, or watch something on edu cational television, think of the peopl behind the production. One of them jus might be an extremely creative perso named Mitch sitting in front of a littl white computer from Radio Shack.

That's all for now. If you have comment or question about this article or any matter related to education an the Color Computer, please contact m at 829 Evergreen, Chatham, Illinoi 62629.

Help Us Battle the High Cost of Disk Drives

NOW . . .
V-PRINT
A utility to print directory on paper
$9.95

New Lower Price Un-DISK Drives ~~$49.95~~? $34.95

You Bet! There are empty spaces in your 32K and 64K CoCo. The Preble VDOS Un-DISK helps you fill them up with PROGRAMS!

- Un-DISK uses your computer's extra memory like a fast disk drive
- Un-DISK can store BASIC and MACHINE LANGUAGE programs.
- Un-DISK is INVISIBLE Yup! Un-DISK does not interfere with normal CoCo or Computer Operation
- Un-DISK appears only when you type the magic word VDOS
- Un-DISK comes with comprehensive instructions which you may not need because
- Un-DISK is self-prompting and easy to use!
- Un-DISK is provided on cassette
- Un-DISK is faster than a slow clumsy DISK DRIVE and best of all .
- Un-DISK is CHEAPER than a DISK DRIVE!
- Un-DISK will work even if you already own a disk but WHY BUY A DISK AT ALL?
- Un-DISK should be in the library of every serious CoCo user even if you own a disk says Frank J Esser, independent reviewer for RAINBOW Magazine!

OK sure, disk drives ARE NICE. I own one But if your finances are limited, the Un-DISK can give you much of the power of the mechanical drive Even if you already own a disk the Un-DISK can work like a super fast extra disk

EXTRA . . . EXTRA . . . EXTRA . . . EXTRA . . .
Additional Power For $14 95

Only with VDUMP for the Un-DISK

- VDUMP lets you make a cassette backup copy of everything stored in the Un-DISK
- VDUMP lets you save 5, 10, 15 or more programs on a single cassette tape file
- VDUMP lets you switch Un-DISKs. With a single load operation replace a group of financial programs with a set of children's programs. (The new VDUMP tape overwrites the old)
- VDUMP can allow you to save a whole lot of RAINBOW ON TAPE in a SINGLE file
- VDUMP is the perfect companion to the Preble VDOS Un-DISK

Available from Doctor Preble's Programs, naturally! Bringing you fine Color Computer Products Since 1983!

The Preble VDOS Un-DISK **$34.95**
The Preble VDUMP $14 95
Shipping & handling
U S. and Canada $1 50
or $5 00 to other foreign points

Mind-tingling action!

THE SECOND RAINBOW BOOK OF ADVENTURES

Twenty-four of the most challenging Adventure games ever compiled await you in this latest offering from The Rainbow Booksnelf. Journey through time, fight World War III, win the heart of a beautiful and mysterious princess. Experience the titillations of the most rugged Adventurer without ever leaving your seat.

Order The Second Rainbow Book of Adventures and among the 24 program listings you'll receive are:

Yellow Submarine — Meet the Beatles and attempt to outlast the Blue Meanies while enjoying some of the Fab Four's all-time musical hits
Ring Quest — Regain possession of a magical ring and save a kindom.
Time Tripper — Lost in another dimension.
Chief Inspector — Who killed B.L. Brown?
Sir Randolf Returns — The sequel to a favorite from our first Adventure book.
Silverton House — Where's the money been stashed?
Ice Princess — Just one glance at this beauty will steal your heart

Experience other traditional and contemporary challenges from these winning authors Mark Fetherston Jeff Crow, Larry Lansberry, J C. Jackson, Robert W Mangum II, Robert Poppe David Taylor Gregory Clark, Steve Skrzyniarz, David L Dawson, Curtis Boyle, Bruce K. Bell, Pat Pugliano, Pat and John Everest, Mike Fahy, Scott Settembre, Darin Anderson, Robert L Thomas, Terrance Hale, Paul Hensel, Philip Courie, Michael Dennison and Robert Dickau.

The Second Rainbow Book of Adventures sells for only $13.95!

For greater convenience, order the Second RAINBOW Book of Adventures and Adventures Tape through the shopping area of the CoCo SIG at Delphi!

THREE BONUS PROGRAMS
WHEN YOU BUY THE SECOND RAINBOW ADVENTURES TAPE!

That's right. You'll receive a total of 27 fantastic Adventures when you get the Second Rainbow Adventures tape. The three bonus games are Castle Thuudo, by Carmen D. Michele; Halls of Dungeon Death, by Eric and Mark Riel; and Caves of Kalakh, by Jane Fisher — programs with listings too lengthy to include in the book Save yourself hours of typing listings. Load these great Adventures into your computer and run them!

The Second Rainbow Adventures Tape is only $13.95.

The tape is an adjunct and complement to the book. Even if you buy the Second Rainbow Adventures Tape, you'll need the book for the introductory material and loading instructions

Keep your Rainbow Bookshelf up-to-date!
See Page 117 for additional Rainbow Bookshelf offerings.

The Rainbow Bookshelf™

Timing and the SAM Chip

By Tony DiStefano
Rainbow Contributing Editor

As we all know, the CPU in our CoCo is the MC6809E. It is the heart of the computer. It equires RAM and ROM and I/O and 'ideo and so on to help support it. All hese devices must be memory mapped. 'hey must appear somewhere in the 4K bytes of memory the CPU can ccess. The proper timing and sequenc-ng must be within the specifications of he CPU. Normally, a handful of TTL 74 series) logic chips take care of this. n the CoCo one big chip takes care of ll of this and more. The chip is the MC6883, sometimes known as the 74LS783N. The name of this chip is a Synchronous Address Multiplexer or SAM for short. This is a 40-pin chip hat mates the MC6809E and the MC6847 (the video chip). This chip also does all of the dynamic memory refresh .iming and memory mapping of all the other major chips of the CoCo. As you can see, this thing is a real workhorse of a chip. By the time I am finished describing this chip, everyone will have as much respect for it as I do.

Tony DiStefano is well-known as an early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.

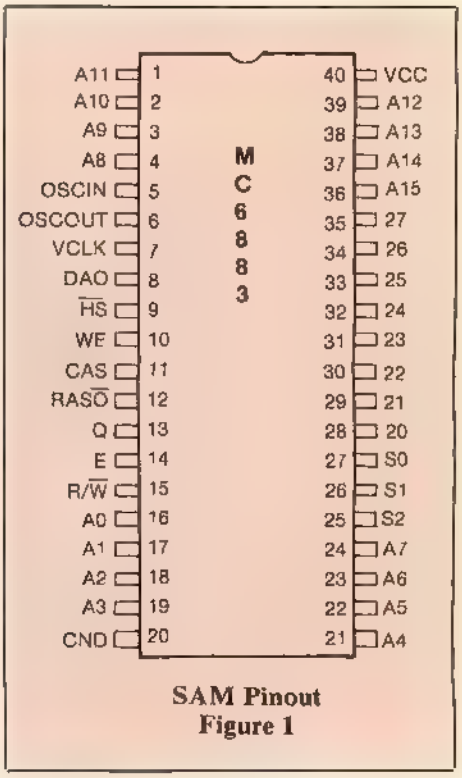
The first part of this article is a pinout of this chip. Figure 1 shows the pinout of the SAM chip. The following is a pin-by-pin description of the Motorola chip number MC6883.

Pin 1 to 4 — A11 to A8. Address lines A11 to A8 respectively from the MC6809E. These are four of the 16 address lines the SAM requires to fully control the memory mapping of the CPU.

Pins 5 and 6 — OSCin and OSCout. These are the crystal oscillator inputs. A crystal and supporting components supply the SAM a master frequency of 14.31818 MHz. This is the highest frequency available in the CoCo.

Pin 7 — VClk. The first function of this pin is to generate an output of 3.579545 MHz. This supplies the color carrier for the VDG (Video Dispay Generator) Clk pin. The second function resets the SAM when this pin is pulled to a logic level of 0, acting as an input. In the CoCo, this pin is part of the reset circuitry.

Pin 8 — DA0 (Display Address 0). The function of this pin as described in the Motorola manual is the least significant bit of a 16-bit video display address. The more significant 15-bits are outputs from an internal 15-bit counter which is clocked by DA0. The second function, not used by the CoCo, is to indirectly enter the logic level of the VDG FS (field synchronization pulse) for vertical video address updating.



SAM Pinout
Figure 1

Pin 9 — HS. This input, connected to the HS output of the VDG, detects the

falling edge of the pulse in order to initiate eight dynamic RAM refresh cycles. It also resets four least significant bits of the internal video address counter.

Pin 10 — $\overline{\text{WE}}$. This output is the write enable pulse that enables the CPU to write into dynamic RAM.

Pin 11 — $\overline{\text{CAS}}$. This output is the Column Address Strobe. It strobes the most significant 6, 7 or 8 address bits into dynamic RAMs.

Pin 12 — $\overline{\text{RAS0}}$. This output is the Row Address Strobe 0. It strobes the least significant 6, 7 or 8 address bits into dyamic RAMs in Bank 0.

Pin 13 — Q. This output is the Quadrature clock used by the CPU that leads the 'E' clock by about 90 degrees.

Pin 14 — E. This output 'E' clock, bett known as the Enable clock, is used the CPU. It is the main CPU timing a is also used by most peripherial devic This clock determines the speed which the CPU operates.

Pin 15 — R/$\overline{\text{W}}$. This input is fed fro the CPU's R/$\overline{\text{W}}$ line. It tells SA whether the CPU is reading or writi data to memory, writing to the SA registers or device 0.

Pins 16 to 19 — A0 to A3. Address lin A0 to A3 respectively from t MC6809E. These are the next four the 16 address lines the SAM requir to fully control the memory mapping the CPU.

Pin 20 — GND. Return ground for t five volts. Signal ground to which a signals are referenced.

Pins 21 to 24 — A4 to A7. Address lin A4 to A7 respectively from t MC6809E. These are the next four the 16 address lines the SAM requir to fully control the memory mapping the CPU.

Pins 25 to 27 — S2 to S0. S2 is the mo significant bit of the three device sele bits. The binary value of these three pi selects one of eight chunks of CP memory map, device 0 to 7. Varying i length, these chunks provide chip s lects for three ROMS, RAM, three I O areas and boot area; the boot area not used in the CoCo.

Table 1 SAM Control Registers

Address	Mode	Label	Name	Descriptions
FF DF	S	TY	map type	1 = all RAM 0 = ROM/RAM

	1	0	1	0	1	0	1	0

S = set C = clear

Chunk Name	Mapped Area	Description
S0	$0000 to $7FFF 0 to 32767	This area in a 64K machine is 32K of user RAM.
S1	$8000 to $9FFF 32768 to 40959	This area is occupied by the 8K Extended BASIC ROM chip.
S2	$A000 to $BFFF 40960 to 49151	This area is occupied by the 8K Color BASIC ROM chip.
S3	$C000 to $FEFF 49152 to 65279	Normally this area is occupied by the 8K Disk ROM chip, but this area can access up to 16K.
S4	$FF00 to $FF1F 65280 to 65311	This area is 32 bytes long. Four bytes are used for a PIA to which the keyboard HS, VS and audio select are connected.
S5	$FF20 to $FF3F 65312 to 65343	This area is also 32 bytes long and again only four bytes are used for a PIA to which the VDG controls, D/A, cassette motor, RS-232 and interrupts are connected.
S6	$FF40 to $FF5F 65344 to 65375	This 32-byte area is used with a disk controller to control things like drive select, FDC control and drive motors.
S7	$FF60 to $FFDF 65276 to 65503	This is not used except for the SAM control registers.

Table 2

ns 28 to 35 — Z0 to Z7. These are the ght multiplexed address lines needed access 64K dynamic RAM. With 16K namic RAM, only Z0 to Z6 are used id Z7 is $\overline{RAS1}$ for a second bank of K chips. With 4K dynamic RAM, Z6 not used. These lines are also used to nerate the video address refresh on e alternate 'E' cycle.

ins 36 to 39 — A15 to A12. Address ies A15 to A12 respectively from the IC6809E. These are the last four of the address lines the SAM requires to lly control the memory mapping of ie CPU.

in 40 — Vcc. This pin requires +5 olts. It powers all the functions in this iip.

As you can see from these descriptons, the SAM chip and VDG chip are osely linked. The SAM chip generates ata from its RAM and delivers it to the DG. That is one of the functions of the AM. It works closely with the VDG ionitoring the horizontal and vertical ynes in order to give it the proper data iat the VDG later converts to a video gnal. The SAM has many modes in hich it delivers video data to the VDG. hese modes are selected by a set of egisters in the SAM's memory map. ut since the SAM chip has no data nes going to it, the registers are accessed by writing to odd address locaions to set the register and writing to ven address locations to clear the egister. The data written to these ocations is irrelevant. Table 1 shows all he SAM control registers and their unctions. Most of the registers shown ire used with the VDG.

Pins S0 to S2 are used to decode chunks of memory. These so-called chunks of memory are what memory maps the CoCo into what we know it to be. For instance, BASIC is one chunk that is 8K long. Disk Extended BASIC is another chunk that takes up 16K. These eight chunks are decoded from the three pins by using a 74LS138. You might remember this from a past article, but if you don't, a '138 is a three-input to eight-output decoder; just what the doctor ordered. Each one of these eight outputs controls one chunk of memory. Table 2 shows all eight chunks and describes where in the memory map they appear and what use each has in the CoCo.

In Table 2, notice that part of S7 are the SAM control registers. Table 1 describes the SAM control registers. The SAM control registers are divided into six areas. The following is a description of each of these areas.

The first area is the map type. When cleared, the SAM is in the map type 0. This is the mode that BASIC sets it up to be. The ROMs are active and a maximum of 32K RAM is accessible. When set, the SAM is in the map type 1 This mode is better known as the 64K mode or the RAM mode. In this mode none of the ROMs are active but all 64K RAM is accessible. The OS-9 operating system uses this mode.

The next mode is the memory size. The SAM can use three types of dynamic memory, 4K, 16K and 64K. When your CoCo is first turned on, a routine in the BASIC ROM checks to see what kind of RAM is installed and sets the SAM chip accordingly.

The third mode is CPU rate. The SAM has some control as to the speed at which the CPU can operate. It has three choices; the first is called slow. In this mode the CPU runs at .894 MHz. The next is the dual speed mode. Depending on where the CPU is accessing memory, it can access it at .894 MHz or at the faster 1.78 MHz. At the dual speed, S0 and S4 are accessed at the slower speed, all other accesses are at the higher speed. The third speed is the fast speed. This is where all accesses are done at the high speed, but at that speed, the SAM chip does not have the time to do video. The video screen displays garbage.

The fourth mode is the page mode. When the SAM is in map type 0 and is using 64K memory chips, only *half*, 32K, of memory is used. The other half is just sitting unaccessible. Setting this register switches in the other half of memory and switches out the first half.

The fifth mode area is a big one in that it takes up a lot of room. This is the display offset. This offset tells the SAM chip where in memory to start the video scanning. Since the smallest memory area the SAM can scan is 512 bytes, all offsets are 512 bytes apart. The display offset is a binary address to the start of the video display.

The sixth area is the VDG mode. Since graphics pages take up more memory than text, the SAM has to scan more memory. The amount of memory scanned depends on the graphics resolution mode required. Basically there are three amounts of graphics memory. The first is 1.5K memory, the second is 3K and the highest is 6K. These modes of graphics must match the graphics mode the VDG is set to. You will find more detail on these modes in the BASIC manual supplied by Radio Shack.

The last mode is reserved for future use. Who knows what Motorola has in store for these unused registers.

The SAM chip is a very complex chip, indeed. I have just described only the major parts of this chip. Complete details on this chip are available from your Motorola dealer. The details I have given are taken from that manual and the TRS-80 Color Computer Technical Reference Manual, available at your local Radio Shack store.

ASSEMBLY LANGUAGE PROGRAMMING for the TRS-80 COLOR COMPUTER

At last - The book exclusively for you and your CoCo !! You've learned BASIC and are now ready to learn assembly language programming. This hands-on guide begins with the basics and progresses to the expert level; revealing programming conventions and techniques and all the internal capabilities of the TDP-100, CoCo 1 and 2. At every step of the way are illustrations, sample programs, and plain English explanations. All sample programs are shown as assembled with Radio Shack's EDTASM+ cartridge. Plus, a complete chapter explains how to use all EDTASM+ capabilities. This book describes how to write subroutines, interrupt handlers, programs that control the graphics display modes, cassette, disk, keyboard, sound, joysticks, serial I/O, interrupts, and use of ROM resident subroutines. Also covered are the MC6809E microprocessor, the video display generator (VDG), peripheral interface adapters (PIA), SAM, memory, and how they all work together. Suitable as a high school or college textbook.

CHAPTERS: The Binary Number System - Memory and Data Representation - Introduction MC6809E Microprocessor - Addressing Modes of the MC6809E MC6809E Instruction Set - Assembly Language Programming with EDTASM+ - Assembly Language Programming - Assembly Language and Extended Color BASIC - Internal Control and Graphics - Technical Details.

PIPELINE

LOCK IT TIGHT Technalock is a low-cost way to secure movable equipment from theft. Pressure-sensitive adhesive bonds the securing plates to the equipment while a vinyl-coated steel cable and lock completes the system. The kit can be used for applications other than computer equipment; stereos, toolboxes, outboard motors and many other items can be protected as well. The master system sells for $24.95 and expansion kits are available. ***Contact Business Security Systems, 512 South Hanley, St. Louis, MO 63105, (314) 962-4446.***

POWER PLAY Ohm/Electronics recently introduced the Scooter(R) Model SP5G Guard-It™ Control Center for personal computers. The SP5G provides five protected and switched outlets. LED indicators show the status of the main power, computer and monitor outlets. The unit protects against noise, voltage surges and spikes. A resettable circuit breaker completes the front panel. The thin, modern cabinet, which emulates the look of the IBM PC and clones, features an attached swivel base. Suggested retail price is $98.95. ***Contact Ohm/Electronics, 746 Vermont Street, Palatine, IL 60067, (800) 323-2727. In Illinois, call (312) 359-6040.***

PICKS FOR YOUR POCKET Specialized Systems Consultants Inc. has announced its latest edition to its line of pocket references. The *Text Processing Reference* is a guide to UNIX word processing tools and includes coverage of the mm macros and the tbl, eqn, nroff and troff commands. The 32-page guide sells for $6. Other pocket references offered by SSC are *UNIX Command Summary*, *C Library Reference for Standard System V*, *MS-DOS Command Reference*, *FORTRAN 77 Reference* and the *VI Reference*. ***Contact Specialized Systems Consultants Inc., P.O. Box 55549, Seattle, WA 98155, (206) 367-UNIX.***

IMPROVEMENTS Tandy Corporation has announced that consolidated sales and operating revenues for the month of May were $245,108,000. This is an increase of 12 percent over the May 1985 revenues of $219,074,000. Tandy's U.S. retail operations recorded a 10 percent May gain over that same period in 1985. In May 1986, recorded sales and revenues for U.S. retail operations were $195,414,000 while May 1985 sales were reported to be $177,112,000. Revenues from U.S. stores in existence more than one year increased slightly in May 1986. Keep it up Tandy!

ADDITIONS Black Box Corporation has issued the second edition of its personal *Black Box*(R) *Catalog*. The new catalog offers 20 percent more items than the previous issue. New product lines include data acquisition products, software to serve as management tools and several reference books on the personal computing field. Also included in the 88-page, full-color catalog are cables, switches, test equipment, tools, modems, spoolers, protocol converters and terminal emulation boards. Subscription to the catalog is available at no charge by writing: ***Personal Black Box(R) Catalog, P.O. Box 12800, Pittsburgh, PA 15241, or by calling (412) 746-5500.***

NO MORE STICKY DISKS Weber & Sons Inc. has found a method of labeling diskettes. The NoLabelSystem(c) is a permanent label way to organize and identify floppy disks. Instead of peeling off old labels and affixing new ones, you affix a clear plastic pocket to the disk and slide in an insert card with the appropriate information on it. To rename the disk, just slide in a new card. Included in the NoLabelSystem(c) are: 100 plastic pockets, 100 white and 100 color insert cards. The tabs on the insert cards stick out of the pockets for easy removal. Sizes are available for 3½-inch, 5¼-inch and 8-inch diskettes. Th kit is $19.45 plus $3 shipping. Catalc numbers are: NLS-3.5-100, NLS-5.2: 100 and NLS-8-100. A test packag containing 25 samples of each item also available for $6. ***Contact Weber Sons Inc., NLS Dept., 3468-2 Hwy ! Freehold, NJ 07728, (800) 225-0044.***

WANT TO GO OUT? Internation Resource Development Inc. has give us some insight into the future of datin The firm is predicting that by 199 singles bars around the world will b equipped with computerized card reac ers to help their customers meet "com patible" companions. According t Matthijs Moes, who led the study effor customers will carry special identifica tion cards — about the same size a credit cards — and the terminal/reader in the bars will read the informatio into a small computer. The compute will compare personal attributes an indicate to the customer who else in th bar might have compatible interests The customer will have to take it fron there. The cards will give a whole nev meaning to the term "personal" compu ter, says Moes.

On a related note, IRD says medica cards, similar to the dating cards, wil be introduced first. These cards wil contain all-important medical histories of the carrier. This information will help in processing insurance claims and more importantly, speed necessary attention to the ill. Blue Cross/Blue Shield of Maryland announced last year that it had given Canon a contract for $40 million to produce some 60,00(reader/writer terminals over a five-year period.

EXPERIMENTER'S DELIGHT OWI Inc. has expanded its Movit family of educational robot kits to include the WAO. This robot is designed to teach the fundamentals of computer programming (e.g. flowcharts), perform graphics and develop an awareness to robotics. WAO has an internal microcomputer chip. The system stores a program in ROM (2K) and will store a user program in RAM (128 x 4 bits). With its built-in RS-232 interface, the WAO is ready to communicate with most personal computers. WAO is sold in kit form and requires assembly. The electronics, however, come preassembled and tested. Suggested retail for WAO is $99.95. ***Contact OWI Inc., 1160 Mahalo Place, Compton, CA 90220, (213) 638-4732.***

256K **SUPER RAM** 512K

HOME RUN!

➡ 256K Bd - $129.95
➡ 512K Bd - $169.95*
(Requires RS Multi-Pak)

OS-9 DRIVER $24.95

The first 256K/512K memory bd for the CoCo II ! Inside this low noise metal case lives 256K/512K of memory and all the circuitry to access it as a RAMDISK ! Compatible w/all CoCo II's even 26-3127B & 26-3134A/B (see June '86 Rainbow Review)
*Recommended for OS-9 users !

With this handy joystick port switchbox, CoCo can pull off . . .

THE OLD SWITCHEROO

By Mark Haverstock

The Color Computer owner has a multitude of control devices to choose from. Several varieties of joysticks, trackballs, touchpads and mice are available to help us draw, play and create. However, the Color Computer can only accommodate one device at a time in each of its joystick ports. Likewise, the hardware component of the popular graphics program *CoCo Max* only offers a single plug-in socket.

If you've ever had to reach behind the computer to plug and unplug joysticks, or have wanted to change drawing devices in *CoCo Max*, you'll appreciate the Stick Switcher. Armed with a few parts and tools, you can build this convenient switchbox for selecting up to three different devices on one joystick port. An off positon is also included. It allows all the control devices to be disconnected from the joystick port.

Mark Haverstock is an English and reading teacher for the Boardman Schools in Youngstown, Ohio, and is involved in computer and media projects at the middle school level. His hobbies include computing, photography and amateur radio.

You can also transfer MS-DOS files to your CoCo disk, even format CoCo disks! CoCo Util will save you countless hours of retyping! No need to move your computer or printer anymore! Requires 128K MS DOS computer w/2 disk drives - **$29.95**

NEW!

SOFTWARE BONANZA PACKAGE

Create an instant library of Spectrum Projects TOP Colorful Utility software. Select any of the following 12 programs to customize your own SPECTACULAR SOFTWARE BONANZA! CoCo Checker, Multi-Pak Crak, CoCo Screen Dump, Disk Utility 2.1, Spectrum Font Generator, Tape/Disk Utility, Fast Dupe II, 64K Disk Utility, Spectrum DOS, CoCo Calendar, Schematic Drafting Processor, OS-9 Solution, Graphicom, EZ Base or Blackjack Royale (a $300 plus value) for only **$99.95!!!**

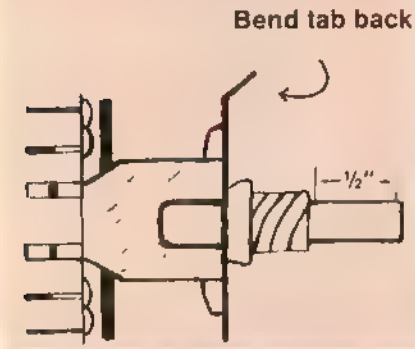
SPECTRUM PROJECTS
PO BOX 21272
WOODHAVEN NY 11421
COD ORDER HOT LINE 718-835-1344

This is particularly important for programs that are adversely affected by having joysticks plugged in during operation.

You will need the following parts: One 6-pin DIN plug, #274-020; three 6-pin inline DIN jacks, #274-021; an experimenter box, #270-2301; a two-pole, six-position switch, #275-1386; one knob, #274-407; five feet of five-conductor stranded wire; dry-transfer lettering; epoxy; and electrical tape or shrink tubing.

The tools needed include: a drill, ¼-inch and ⅜-inch drill bits, flat metal file, small screwdriver, small Phillips screwdriver, wire strippers, pliers, soldering iron and solder, and a hacksaw.

Figure 2: Switch

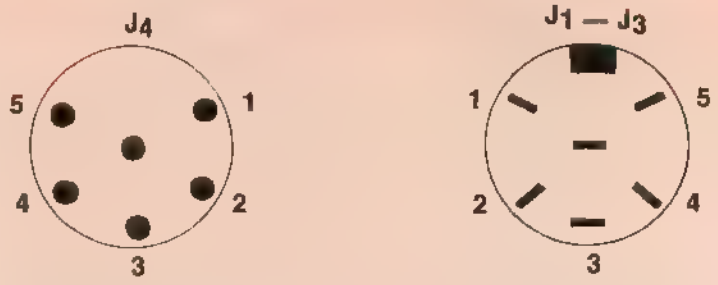


Construction

First, take the metal cover off the project box by removing the four Phillips screws at each corner. Mark the positions of the holes to be drilled on the plastic bottom of the box (see Figure 1). Then drill these holes using the ¼-inch drill bit. Use the file to remove any burrs from the inside of the box.

Mark the position of the switch mounting hole on the metal cover. Drill this hole using a ⅜-inch drill bit. Again, remove any burrs from the rear of the cover. To mark the switch positions on the box cover, you need to temporarily install the switch and knob. Prepare the switch by sawing off all but a half inch of the shaft. File the rough edges after cutting. Find the locking tab and bend it down so it is even with the top surface of the switch (see Figure 2). Mount this switch on the metal cover using the hardware provided and tighten gently with the pliers. Then attach the knob to the switch shaft. Rotate the knob, marking positions 1, 2, 3 and off lightly on the cover with pencil. After these have been marked, remove the switch and knob. Apply the dry-transfer lettering at these positions.

Figure 3: Plugs/Jacks Wiring (rear view)

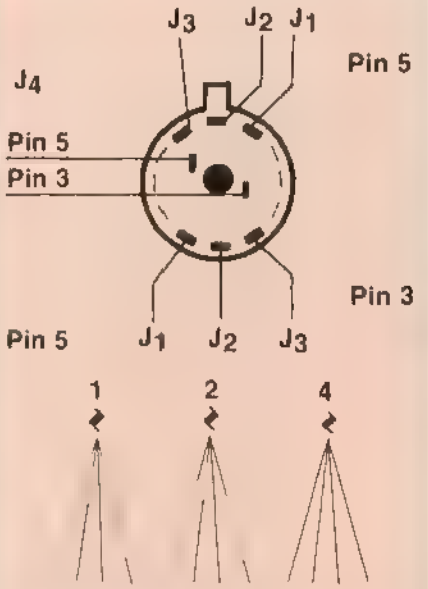


274-020 Plug

274-021 Inline Jack

The next step is to wire the cables and jacks. If five-conductor cable is not available in your area, substitute five #22 gauge stranded wires twisted together, or use the wire from an old broken joystick. Prepare one 36-inch and three five-inch cables by removing one inch of the outer jacket and stripping ¼ inch of insulation from each individual wire at both ends. Remove the covers from the jack and plugs and solder these wires as shown in Figure 3. Before replacing the covers, be sure to inspect the solder connections for shorts.

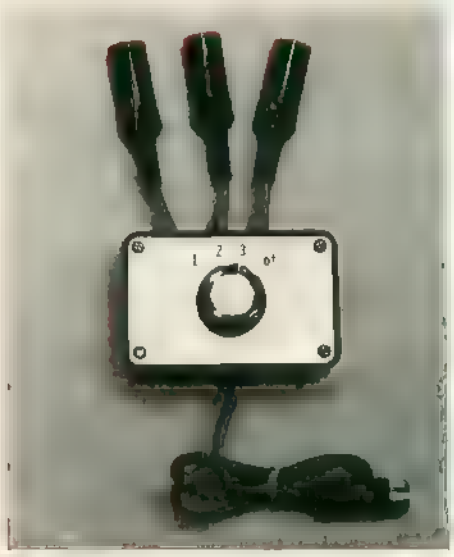
Figure 4: Switch Wiring Diagram



Match remaining wires from pins 1, 2 and 4. Twist each group together, solder and insulate with electrical tape.

Insert the remaining ends of the wires from the plugs into the three holes in the rear of the project box and the wire from the jack into the front. Wire the switch according to Figure 4. Note that only two of these lines will be switched: the +5V and ground lines. The others will be matched, soldered together and covered with electrical tape or hea shrink tubing.

To secure the wires attached to J1-J and keep them from pulling out of th box, apply a small amount of epoxy a the point where these wires enter th inside of the box. Allow the epoxy t



dry thoroughly before going to the next step.

Fasten the switch to the metal cover and align the knob with the positions marked on the metal cover. Be aware that only the first four positions of the switch will be used.

Finally, reassemble the box, being sure to tuck the wires carefully inside. As a finishing touch, you may want to cover the dry-transfer letters with clear nail polish to keep them from rubbing off. To test, simply plug the switcher into a joystick port and add your joysticks or other control devices in positions 1, 2 and 3. You can now enjoy the convenience of switching without unplugging.

(Questions about this project may be directed to the author at 6835 Colleen Drive, Youngstown, OH 44512. Please enclose an SASE for a reply.)

HOW DO YOU TOTE A RAINBOW?

It's simple — Give a RAINBOW gift certificate . . .

Let a gift subscription to THE RAINBOW carry the premier Color Computer magazine right to your friends' doorsteps. THE RAINBOW is *the* information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW — over 250 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more searching for lost copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:

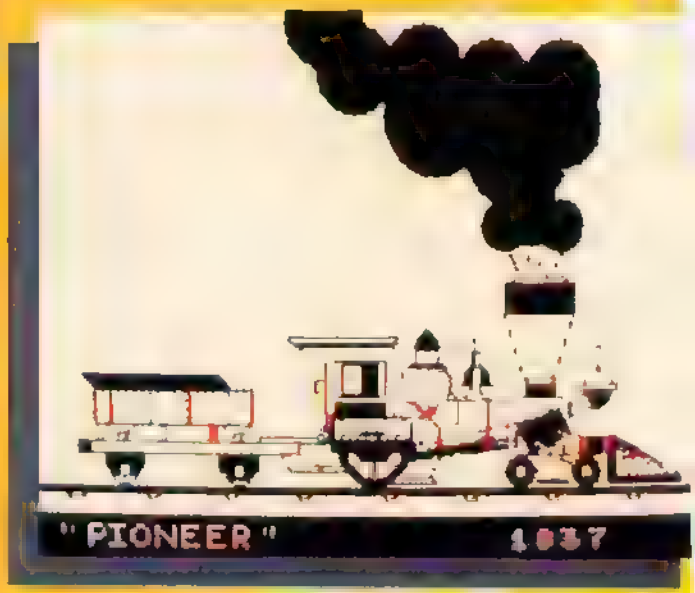
For credit card orders call (800) 847-0309, 8 a.m. to 5 p.m. EST.
All other inquiries call (502) 228-4492.

Subscriptions to THE RAINBOW are $31 in the United States, U.S. $38 in Canada. The surface rate to other countries is U.S. $68; the air rate, U.S. $103. Kentucky residents add 5% sales tax. **U.S. currency *only*, please.** All subscriptions begin with the current issue. Please allow 6 to 8 weeks for delivery. In order to hold down non-editorial costs, we do not bill.

The CoCo Gallery

1st PRIZE

Todd Larsen
Where Worlds Meet
Parallels of planets through a saw-toothed fracture initiate this month's gallery. Todd lives in Mobile, Alabama, and created his worlds with *McPaint*.



2nd PRIZE

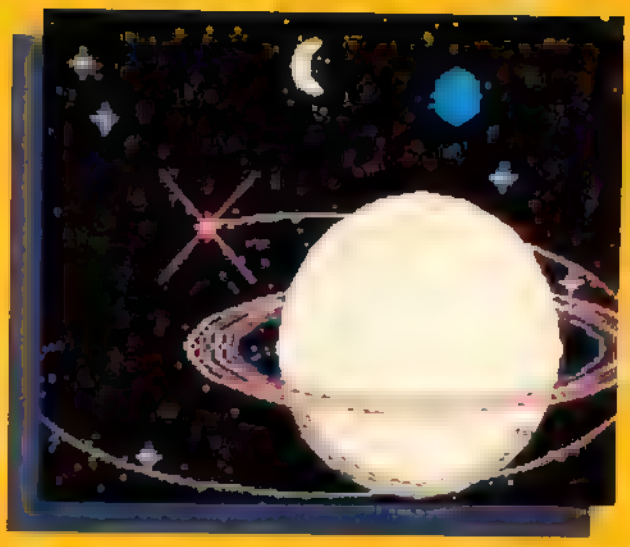
C.W. "Harry" Harriman
Pioneer 1837
Sauntering back through history garners second prize for Harry, who lives in Bradford, Massachusetts. He used BASIC to create this memorable train.

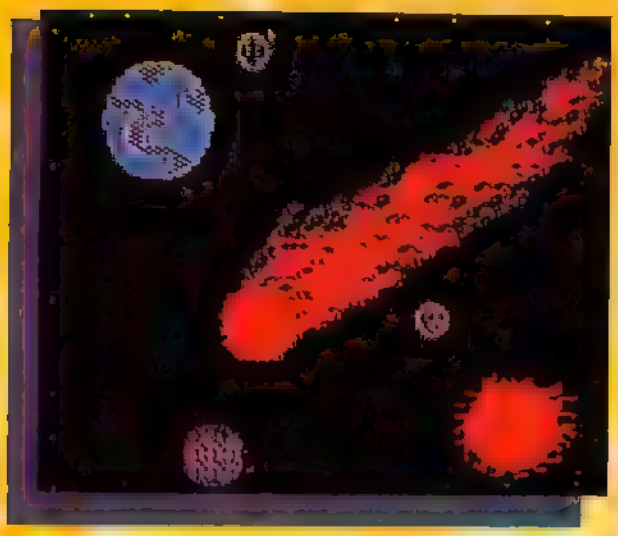
3rd PRIZE

Charlie Fulp
Basketball Zone
Using *CoCo Max*, Charlie presents the gallery with an encompassing view of the all-American sport of basketball. Charlie lives in South Boston, Virginia.

Seth Williams
Saturn
From Benson, Arizona, Seth used BASIC to enhance the planet Saturn for the patrons of the gallery.

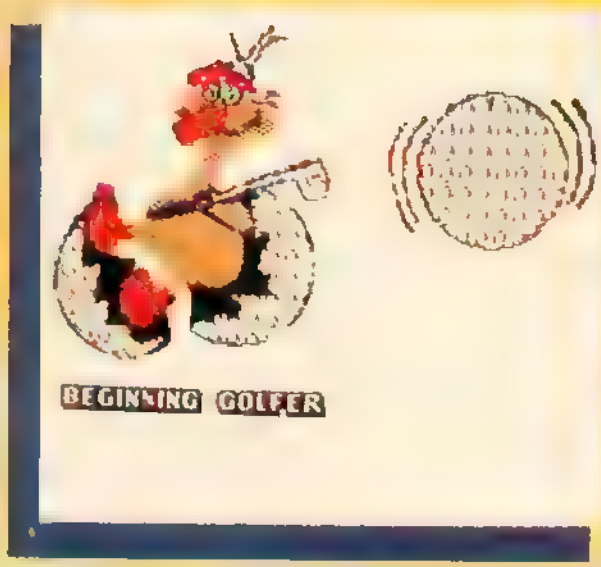
HONORABLE MENTION





HONORABLE MENTION

James Farmer
Comet
With Halley's Comet in his thoughts, James, who lives in Charleston, South Carolina, used *Micro Illustrator* to create this fiery panorama.



HONORABLE MENTION

Robin Moulder
Beginning Golfer
Robin enlightens the gallery with this humorous caricature for the novice golfer, created with *CoCo Max*. Robin lives in Stone Mountain, Georgia.

SHOWCASE YOUR BEST!

You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community!

Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere.

We will award a first prize of $25, a second prize of $15 and a third prize of $10. Honorable mentions will also be given.

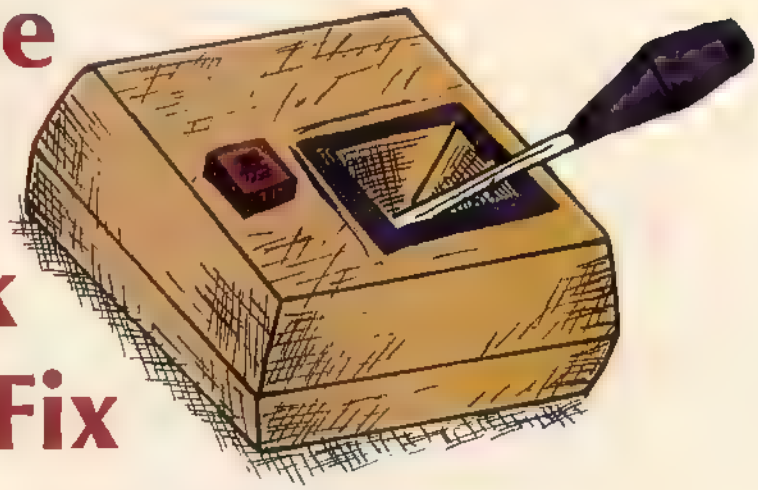
Make your deluxe joystick firebuttons electrically parallel

The Quick Joystick Fix



By Bruce W. Goshorn

If you own a Radio Shack deluxe joystick (Cat. No. 26-3012A) you may have realized that the black firebutton has no effect when pressed. A note in the accompanying manual states as much. With this extremely simple hardware modification, you can make it better. All you need is a Phillips screwdriver and a hot soldering iron. In fifteen minutes you'll have the versatility of two firebuttons. And away we go.

Make sure the stick is in the "spring-loaded to center" position. If not, hold the joystick in one corner and flip *both* black tabs away from the "free" positions. This disconnects the tabs (and the joystick bottom) from the rest. With the bottom facing up, loosen the two screws with the screwdriver until they ratchet. Lift the bottom free and place it on the table with the four feet up. Direct your attention to the top portion. If you fumble it and the stick assembly falls free from the upper part of the case, don't panic. Keep the assembly together and slide it back into the slots between the three black posts.

Place the stick down into a suitable holder (I used a roll of bathroom tissue) to steady it. Locate the blue wire and separate it from the rest by carefully pulling it up to a gentle loop from cable end to black firebutton. Measure about a half inch from where it exits the cable end and cut it in two. You should end up with an inch or so attached to the firebutton. Strip a quarter inch of insulation from it. Notice the white wire attached to the red firebutton lug.

Gently pull all other wires away from this lug so the iron won't melt their insulation. Unsolder the white wire and remove any excess solder. Twist the free end of the one-inch blue wire around the free end of the white wire when it's cool and solder these together. Resolder the lug where the white wire came from and let it cool. Now solder the white-blue combination to the lug. Press the other wires down between the stick assembly and the black button. Make sure there are no wires over the post in the corner.

With the cable pointing away from you, pick up the bottom case and, with the catalog number away from you and both X and Y tabs flipped away from their "free" positions, place the bottom case on the top part, align and tighten the two screws. You're ready to test.

Power up the CoCo. At the prompt, press a few random keys. Press the red firebutton and try to type. There should be no response. Release the red button and press some keys. Letters should appear. Repeat this procedure with the black firebutton. Response should be the same. Incidentally, if the CoCo won't take input from the keyboard, you probably have a stuck firebutton. Unplug the joystick(s) and, if normal operation returns, replace or repair the offending joystick.

Your firebuttons are now electrically parallel. Use the one most convenient for the particular application.

I've always believed that even the best things can be better, and this stick is the best yet. I hope you enjoy your new hardware.

(*Questions about this project may be directed to Mr. Goshorn at 1423 Wyoming Court, Orange Park, FL 32073, 904-276-2327. Please enclose an SASE when writing.*)

Bruce Goshorn is a U.S. Navy Ordnance supervisor and author of several safety articles in naval publications. His main interests are CoCo speech and music synthesis.

Introducing

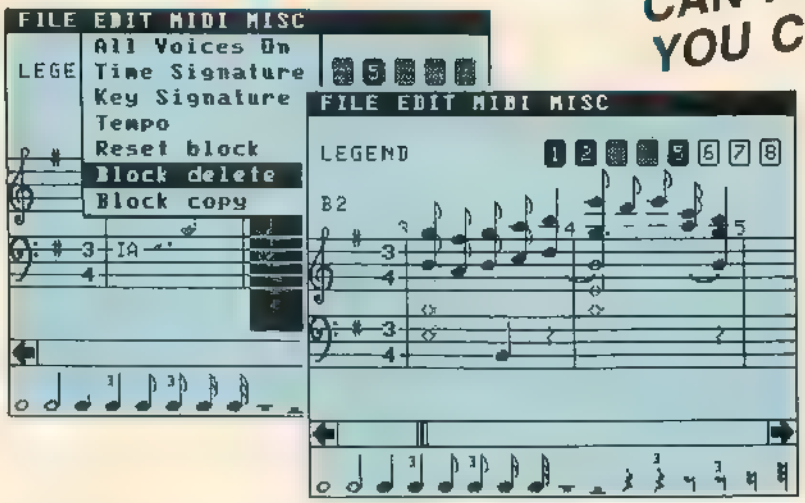
Lyra™

The Musical Coco Max™

IF YOU CAN POINT, YOU CAN COMPOSE

PULL DOWN MENUS

ICONS!



A MUST FOR MIDI USERS

LYRA is the most powerful music composition program we have seen on any computer. We don't mean just the COCO, we really mean any computer. Whether you are a novice trying to learn music or a professional musician with MIDI equipment you will find LYRA a powerful tool. You see we wrote LYRA for musicians that hate computers. If you want proof, purchase a LYRA demo for $7.95. We will apply the demo price to your purchase. MIDI output requires the LYRA MIDI cable (#MC158) or COCO MIDI Seq/Editor (#CM147).

- Ultra Easy to use, just point with joystick or mouse and click
- Compose with up to 8 completely independent voices
- Room for over 18,000 notes (This is not a misprint!)
- Super Simple Editing Supports

Note insert	Block insert
Note delete	Block delete
Note change	Block copy

- Output music to

TV Speaker	Monitor Speaker
STEREO PAK	ORCHESTRA 90
SYMPHONY 12	COCO MIDI S/E
MIDI Synth	MIDI Drum Machine

- Output up to 4 voices without additional hardware
- Output all 8 voices using either SYMPHONY 12 or one or more MIDI synthesizers and drum machines
- Output any voice on any of the 16 MIDI channels
- Transpose music to any key
- Modify music to any tempo
- Automatically inserts bar for each measure as you compose
- Key signature lets you specify sharps and flats only once, LYRA will do the rest
- Plays MUSICA 2 files using LYRA CONVERT (#LC164).
- Each voice may be visually highlighted or erased
- Each measure is numbered for easy reading
- Solo capability
- Block edits are highlighted
- Tie notes together for musical continuity
- Name of note pointed to is constantly displayed
- Jump to any point in the score instantaneously
- Memory remaining clearly displayed, however you will have plenty of memory even for the most demanding piece
- Help menu makes manual virtually unnecessary
- LYRA is 100% software, no need for extra hardware unless you want more power
- Music easily saved to tape or disk
- Requires 64K and mouse or joystick

LYRA (Disk Only) #LY122 ..... **$54.95**

LYRA OPTIONS

These LYRA options are **not** required. They are provided for those wishing additional flexibility

LYRA CONVERT

A program to convert MUSICA 2 files to LYRA files
(T or D) #LC164 ..... **$14.95**

LYRA STEREO ENHANCER

Gives the LYRA stereo output when used with the STEREO PAK or ORCHESTRA 90
(T or D) #LS149 ..... **$14.95**

LYRA MIDI CABLE

A cable to connect your computer to your MIDI synthesizer
#MC158 ..... **$14.95**

LYRA SYMPHONY 12 ENHANCER

Lets LYRA play all 8 voices through SYMPHONY 12
(T or D) #LS177 ..... **$19.95**

STEREO PAK

Plugs into the COCO ROM cartridge slot allowing easy connection to your stereo system.
#SP193 ..... **$39.95**

SYMPHONY 12

A real hardware music synthesizer, lets LYRA play all 8 voices in stereo.
(T or D) #SY149 ..... **$69.95**

COCO MIDI Seq/Editor

A professional quality MIDI interface for MIDI synthesizers.
(Disk only) #CM147 ..... **$149.95**

MUSIC LIBRARY

A collection of over 800 songs. When used with CONVERT, it gives an incredible LYRA library. Each volume 100 songs.
(T or D) #MLXXX **$29.95**

BATAVIA, ILLINOIS 60510
(312) 879-6880

COCO MIDI™ SEQUENCER/EDITOR

Now your COCO can talk to your MIDI music synthesizer. Whether you have a Korg, Roland, Casio, Yamaha, or Moog, it doesn't matter as long as it's MIDI equipped. Choose from our entry level MUSICA MIDI system that plays MUSICA files or our Professional COCO MIDI SYSTEM

- Supports up to 16 tracks.
- Up to 8000 events per track.
- May be used as a sequencer.
- User friendly graphics display.
- Menu driven.
- Metronome available.
- Real time recording.
- Save your masterpiece to disk.

- Playback any or all tracks at any tempo.
- Tracks may be deleted, copied, transposed, or mixed.
- Filter out unwanted channel or type of MIDI data.
- Tempo may be modified.
- Quantitizing to 32nd or 64th.
- Simple music editing.
- Requires 64K disk system.
- Transposition.

Comes complete with Rom Pak Hardware interface, cables, manual, and software. Requires Y-Cable or Multi-Pak.
Disk only. #CM147 . . . **$149.95**

MUSICA MIDI™

MUSICA MIDI takes any MUSICA 2 music file and plays it through your MIDI synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music using MUSICA 2. Includes: documentation, plenty of music, and the cable to connect between the COCO and your synthesizer.
Tape or Disk. #CM126 . . . . . **$39.95**

DX-7 LIBRARIAN™

RAM cartridges for the Yamaha DX-7 aren't cheap and don't hold all the sounds you would like. The DX-7 LIBRARIAN is a program that when used with COCO MIDI, lets you save and load any number of sounds. Save sounds individually or as a group letting you load the DX-7 in seconds.
Disk only. #DX143 . . . . . **$29.95**

MIDI KEYBOARD

If you own the Casio CZ-101 or similar MIDI synth, you know that the mini keys and the short 3 or 4 octave keyboard is limiting. MIDI KEYBOARD when used with our full size 5 octave keyboard gives you the flexibility you need. Comes with cable to connect the COCO to your MIDI synth.
#MK167 . . . . . **$29.95**

MUSICA TO COCO MIDI

This program is for COCO MIDI users that wish to convert MUSICA files so they can be played by COCO MIDI. It opens your MIDI synths to our MUSIC LIBRARY and much public domain music.
Disk only. #MC193 . . . . . **$29.95**

MUSIC LIBRARY™

The MUSIC LIBRARY series consists of 8 volumes: 100 through 800 each sold separately. Each contains over 100 four voice music selections with a playing time of over 3 hours each. The disk version is shipped on 5 full disks. When coupled with STEREO PAK, the music is reproduced with unsurpassed realism.

A JUKEBOX program is included to allow you to select specific songs or automatically play each. These songs are ready to go, you don't need MUSICA 2 or a knowledge of music. MUSICA 2 users may customize each song. Each volume sold separately, specify tape or disk. #MLXXX **$29.95**
List of 800 songs #LS800 . . . . . **$3.00**

MUSIC LIBRARY 100

Stage, Screen, & TV	Classical

Entire Library 30 Hours of Music! 40 disks or 25 tapes

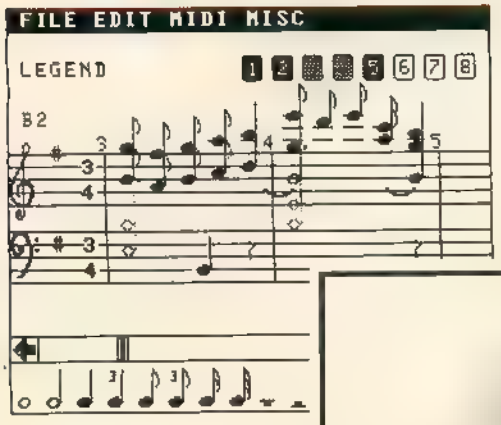
Lyra™ MEETS SYMPHONY 12™

12 SIMULTANEOUS VOICES

4 NOISE GENERATORS

STEREO & MONO

SOUND EFFECTS



SPECIAL COMBINATION OFFER!

If you want to compose music, experiment or just listen to music, LYRA is the tool you need. LYRA represents the new state-of-the-art super user friendly software. Pull down menus and icons make composing music as easy as pointing with a joystick or mouse and clicking. LYRA is capable of 8 individually controlled voices. You may take advantage of the 8 voice power of LYRA using external MIDI synthesizers or SYMPHONY 12. We believe that LYRA and SYMPHONY 12 was a match made in heaven. For a limited time, when you purchase both, we will include free the LYRA SYMPHONY 12 CONNECTION, a $19.95 value.

STEREO AND MONO. By connecting SYMPHONY 12 to your home stereo system, music is produced in stereo, 6 voices from each channel. However, you don't need to have a stereo system, all 12 voices also come out of your TV or monitor.

SOUND EFFECTS. SYMPHONY 12 is a sophisticated sound generator. 12 voices and 4 noise generators give you incredible sound effect capability. We have included gun shot, explosion, racing car and more.

SYMPHONY 12. You get over a dozen music and sound effect selections and complete documentation. Software is shipped on Tape or Disk.

PIANO KEYBOARD. For those wishing to turn SYMPHONY 12 into a real polyphonic synthesizer we offer a full size 61 note piano keyboard.

Tape users using both SYMPHONY 12 and the PIANO KEYBOARD will require a Y-CABLE. Disk systems require a Triple Y-CABLE or MULTI-PAK.

SYMPHONY 12 (T or D) #SY149 **$69.95**
LYRA SYMPHONY 12 ENHANCER #LS177 **$19.95**
PIANO KEYBOARD #PK185 **$169.95**
DOUBLE Y-CABLE #DY181 **$28.95**
TRIPLE Y-CABLE #TY173 **$34.95**

GUITAR CHORD BOOK

This program written by a guitar instructor of 17 years displays in high resolution graphics the exact fingering for over 100,000 chord combinations. You may even tune your guitar to the computer and play along. Whether you are a beginning guitar student or an advanced player, you will find this quick reference to guitar chords invaluable.

32K Disk only #GC153 ..... **$29.95**

MUSIC THEORY

COURSE 1

This course covers all the basics from music notation & duration, key signatures, tempo, to an introduction of the keyboard. This is an entry level course recommended as a prerequisite for Course 2.

32K Disk only #MT101 ..... **$49.95**

COURSE 2

A more advanced course that deals with: Major and Harmonic Minor scales, interval spelling, Triad (Chord) theory, Inversions, Dominant 7th chords, and ear training of the intervals.

32K Disk only #MT102 ..... **$49.95**

Now Your Computer Can Listen To You!

EARS

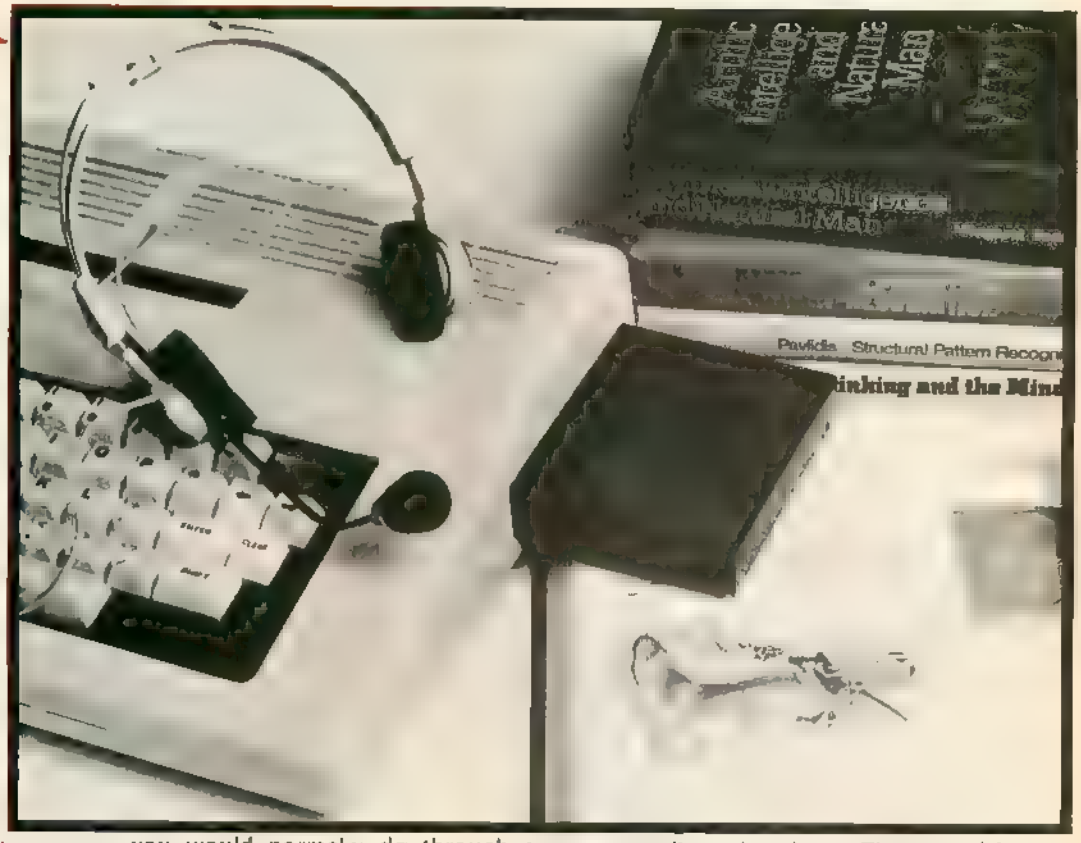
Electronic Audio Recognition System

$99.95

- SPEECH RECOGNITION
- HANDS OFF PROGRAMMING
- HIGH QUALITY SPEECH REPRODUCTION

EARS Does It All!

INCREDIBLE!



Two Years In the Making. Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truely sophisticated speech recognition device. Recognition rates from 95% to 98% are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.

EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtually infinite.

Speech and Sound Recognition. EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In fact you do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that you would normaliy do through a keyboard can now be done by just speaking.

Programming EARS Is Easy. LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line. 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.

It Talks. EARS is also capable of high quality speech We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call **(312) 879-6844**, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need. You get everything you need including a specially designed professional headset style noise canceling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32K or 64K Color Computer.

SUPER VOICE $20 OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for $59.95 with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save $20

VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug 'N' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . **$24.95**

It takes a skilled boxer to come out the winner when you're in . . .

The Eye of the Tiger

By Tim Jones

After seeing the new *Rocky* movie, I just had to try and make a boxing game for my CoCo. Finally, after several long weeks I came up with *Boxing*.

The object of the game is to gain as many points as possible, beat all three opponents and never get knocked down.

When you run the game, the title screen appears and a short song is played. The scoreboard is then presented. This shows your physical strength as opposed to your opponent's. Also on this screen are the fight and round numbers and the total score, which is updated after every fight.

The game screen is composed of several parts. At the top your opponent's strength is represented by a blue bar; your strength is shown at the bottom. You are the man marked "U.S.A." At the left of the screen is a red time bar. When this bar reaches the bottom, the round ends.

Move the joystick in the direction you want to go (without pressing the button). To punch with the left hand, press the firebutton. To punch with the right hand is a little harder. First move the joystick to the right, and then press the firebutton. Since throwing a right punch is harder, you receive more points for hitting with it.

Every time you hit with the left hand, your opponent's power decreases by 10, your power increases by five, and your score increases by five points. If you hit with the right hand, his power decreases by 15, yours increases by five, and your score increases by 10. The same also goes for him.

Decreasing the opponent's strength to zero knocks him down. In order to advance a fight, either knock him out completely, or last three rounds with a score higher than his.

To knock out the first opponent completely, decrease his power to zero. To knock out the second opponent com-

Tim Jones is a high school student in Clinton, Louisiana. He enjoys working with computers and swimming.

pletely, you must knock him down twice in one round. To knock out the third opponent you must have three knock downs in one round. Note: There is no count after a knock down, so stay alert!

Game play is rather sluggish, so I have included a POKE 65495,0 in Line 130. If your computer can't use it, just delete that line. As you can see, the game is long; buying RAINBOW ON TAPE can save hours of debugging. Enjoy! □

Now from Falsoft, The RAINBOW MAKER, comes . . .

The monthly magazine that's reader-friendly

If you're interested in the highly popular Model 100, the Tandy 200, the brand new portable Tandy 600 or Tandy's new generation of MS-DOS computers — the 1000, 1200, 2000, or the exciting new Tandy 3000 — PCM is for you!

PCM, The Personal Computer Magazine for Tandy Computer Users, is brought to you by the same people who bring you THE RAINBOW, the premier magazine for the Color Computer Need we say more?

So, if you're ready to add portability or step up to MS-DOS, stay with Tandy and THE RAINBOW family by subscribing to PCM!

FREE PROGRAMS!

We learned from THE RAINBOW that readers want programs to type in, so each month we bring you an assortment of them, including games, utilities, business applications and graphics.

BAR CODE, TOO!

Also, PCM is the only computer publication in the world (that we know of) that brings you programs in bar code, ready to scan into memory with the sweep of a wand!

TUTORIALS GALORE

Add to this our regular tutorials on telecommunicating, hardware and machine language, as well as BASIC programming tips and product reviews, and we think you'll find we're one of the most informative and fun magazines on the market today.

So if you're ready to add portability or step up to MS-DOS, stay with Tandy and THE RAINBOW family through PCM.

To order by phone (*credit card orders only*) call 800-847-0309, 8 a.m to 5 p.m EST. For other inquiries call 502-228-4492.

☐ **YES! Please send me a one year (12 issues) subscription to PCM for only $28.* A savings of 22% off the newsstand price.**

For greater convenience, order a PCM subscription through the shopping area of the CoCo SIG at Delphi!

RECEIVED & CERTIFIED

THE FOLLOWING PRODUCTS have recently been received by THE RAINBOW, examined by our magazine staff and approved for the *Rainbow Seal of Certification*, your assurance that we have seen the product and have ascertained that it is what it purports to be.

This month the *Seal of Certification* has been issued to:

Max Fonts, a collection of 72 fonts for use with the *CoCo Max* graphics program. Fonts can be typed onto the screen utilizing all of *CoCo Max*'s text style combinations such as bold, italics, outline, etc. Font names automatically appear in *CoCo Max*'s pull-down menu. ***Derringer Software Inc., P.O. Box 5300, Florence, SC 29502, disk of 24 fonts, $24.95; set of 3 disks, $64.95.***

Ultra Telepatch, a 64K program requiring one disk drive and *Telewriter-64*. This new version of *Telepatch* includes word delete, integrated type-ahead keyboard scan with buffer, in memory disk I/O menu with no loss of buffer memory and more. ***CMD Micro Computer Services Ltd., 10447-124 Street, Edmonton, Alberta, Canada T5N 1R7, $19.95 plus $2 S/H.***

The Last Word, a word processor that requires 64K and OS-9. Features pull-down menus, on-screen formatting and 22,000 word online dictionary. Edit files larger than memory, and define macros, pagination, headers and footers. ***Computerware, Box 668, Encinitas, CA 92024, disk $49.95 plus $2 S/H.***

L1 Utility Pak, an OS-9 productivity enhancement. Package contains Filter Kit #1, Filter Kit #2, Hacker's Kit #1 plus several new programs. ***D.P. Johnson, 7655 SW Cedarcrest Street, Portland, OR 97223, $49.95.***

Karate, a 64K game using karate kicks and punches to score points. Requires one or two joysticks depending on number of players. ***Diecom Products, 6715 Fifth Line, Milton, Ontario, Canada L9T 2X8, tape or disk, $28.95 U.S.; $38.95 Canada.***

Memory Bank, a 64K computer program that allows full use of the second 32K in 64K color computers. A RAM disk is also included that allows the second bank to be used for storing programs. Computer can be configured for the "all-RAM" mode, allowing modification of the BASIC, Extended or Disk ROMs, and placing a BASIC program in the upper 8K of memory. ***Dynamic Electronics Inc., P.O. Box 896, Hartselle, AL 35640, tape, $27.95; disk $29.95, plus $3 S/H.***

Physcho: 1, 64K games requiring one disk drive. Package of eight psychological exercises tests skills in observation, reaction time and memory. ***Lomiq, c.p. 105 Succursale A, Jonquire, Quebec, Canada G7X 7V8, $34 U.S., $45 Canada.***

DS-69/69A Digisector, an enhanced version of 64K video digitizer that accepts NTSC standard video input from a source such as closed-circuit television camera or videotape recorder and converts the analog video signal to digital data. ***Micro Works, P.O. Box 1110, Del Mar, CA 92014, $149.95.***

RESETCHG, a machine language program that changes the reset vector in 64K mode so when the Reset button is pressed, the CoCo stays in 64K mode. ***Neat-O-Software, Route 3, Box 205, Kingsport, TN 37664, tape $10 plus $2 S/H.***

Dragon Blade, a graphics Adventure game requiring 64K ECB and one disk drive. The scenario places you in a time of swords and sorcery, when only the bravest of men could destroy the foulest of beasts. Your quest for the legendary blade leads you to the Forest of Lore and it is from here that your Adventure begins. ***Prickly-Pear Software, 2640 N. Conestoga Avenue, Tucson, AZ 85749, $29.95.***

Wizard's Castle, a 64K graphics Adventure game requiring one disk drive. The objective is to save the princess by collecting 24 objects and returning them to the king. Your enemy is the wizard, who has the power to bring back to life the creatures you slay in the quest to save the princess. **Spectrum Projects, P.O. Box 21272, Woodhaven, NY 11421, $24.95 plus $3 S/H.**

CoCo Keyboard, a new Color Computer 2 keyboard to fit your old-style Color Computer (silver or white case), TDP-100 and older CoCo 2. Drops in with no soldering or cutting necessary. ***Spectrum Projects, P.O. Box 21272, Woodhaven, NY 11421, $14.95. Adaptor for 1982 and previous computer (D&E Boards), $9.95. Add $3 S/H.***

The *Seal of Certification* program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a *Seal*, the magazine certifies the product does *exist* — that we have examined it and have a sample copy — but this *does not* constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW's reviewers for evaluation.

— Judi Hutchinson

REVIEWING REVIEWS

Color LISP

Editor:

I must take exception with Mr Dooman's software review of *Color LISP* in the May 1986 RAINBOW. Mr. Dooman compares LISP to both FORTH and BASIC. These are numerical languages. BASIC is a good general purpose, data-processing programming language. FORTH is an extendable, fast interactive, compiled, stack-oriented control language. LISP is a symbolic manipulation language, extendable by user definitions.

Mr. Dooman complains about the documentation using brackets instead of parentheses. The documentation does not contain brackets in the examples — parentheses are used in all examples and all examples have been tested to ensure they function as described. Not one of our many customers have complained about "brackets."

As Mr. Dooman pointed out, there are no standards in LISP function syntax. In our implementation, the syntax of MAPCAR is: MAPCAR/list/function. In some other LISPs the syntax is: MAPCAR/function/list. The syntax can easily be changed to reverse the arguments simply by defining a new function such as: (DE MAPC (fns lis) (MAPCAR lis fns)). All examples in the documentation have been fully tested. The snytax is clearly stated with ample examples to illustrate the proper use. Also the complete function definitions are provided.

Mr. Dooman mentions none of the features of this implementation for the Color Computer such as: low resolution graphics, integrated into architecture of the Color Computer, joystick, sound, cassette functions, disk functions, printing, PEEK, POKE, JSR, firebutton, break, load and save LISP objects, load and save LISP work spaces, and long error messages. This implementation was especially designed to take advantage of the limited resources of the Color Computer. The stack and node area can be redefined to explore different areas of interest. EXPRs, FEXPRs, and machine language subroutines are supported.

Though LISP is an interactive language, this implementation has been optimized for both speed and size. We feel we have a good and reliable product which enables CoCo owners to experiment with a language used extensively in artificial intelligence. Our goal was to provide a powerful, flexible, extendable and reasonably priced software product.

Jim Bachman
Frost Byte

Super RAMdisk

Editor:

Thank you for reviewing the DISTO Super RAMdisk and giving it a fair shake [June 1986]. I would like to inform you that a "hardware" user's manual is now available. The OS-9 software and documentation has been upgraded to V2.0. Anyone who has a print spooler, or any other utility for my RAMdisk may contact CRC Inc., 10802 Lajeunesse, Montreal, Quebec, Canada for more details.

Tony DiStefano
DISTO

DeskMate

Editor:

In Mr. White's review of *DeskMate* for the CoCo in the May 1986 RAINBOW, he mentioned that the Calendar utility was not useful beyond 1999. If he were to enter his data as 4/25/2000 instead of 4/25/00 (which defaults to 1900), he would find the correct date in the correct year. You can use years as late as 9999.

Norman Koslow
Richmond, VA

TX Word Processor

Editor:

I am comparably new to the computer. I got started with the CoCo in August 1985 and ordered RAINBOW at that time.

Since I had purchased the CoCo primarily for word processing, the *TX Word Processor* in "Received and Certified" (November 1985, Page 188) caught my attention. I ordered it and, while waiting, I went to work on *Color Scripsit* as it came with the computer. After *TX* came, I made a quick change and found it so much better in every way. After your review that found *TX* juvenile [March 1986, Page 209], I tried still another word processor, but it too was difficult to run and had very poor documentation, so I went back to *TX* Version 01.08P. I feel your reviewer was over-educated for the job and I think the readers are getting shortchanged because of the review.

This is being written using *TX*, and it is still my favorite. I would like to see another review, preferably by an operator instead of a programmer. There are a lot of us out here who are beginners.

A.J. (Andy) Cryder
St. James City, FL

The Best Epson Screen Dump Utility

Editor:

My program, *The Best Epson Screen Dump Utility*, was reviewed by R.W. Odlin in a recent issue [February 1986, Page 216]. My thanks to your reviewer for taking the time to carefully test the program.

However, one comment in the review has left me scratching my head – that is the matter of pixels being swapped from left to right with *Graphicom* screens. The reviewer did not contact me regarding this problem, and I don't understand how it could happen. The sample printouts on the package are of *Graphicom* screens, and they certainly do not exhibit this problem.

I have no idea how Mr. Odlin loaded the *Graphicom* screens into memory, but if the GC>BIN utility (included with *Graphicom*) is used, I can assure your readers they will have no problem printing out pictures with *The Best Epson Screen Dump Utility*.

RAINBOW ON TAPE

Those Great RAINBOW Programs Without All The Fuss! Subscribe to RAINBOW ON TAPE!

Every month, RAINBOW ON TAPE brings as many as two dozen ready-to-run programs right to you. Using the current issue of THE RAINBOW as documentation, all you have to do is load and run them. Just a one-year subscription gives you more than 230 new programs! The typing time saved is time that can be spent with the CoCo. (RAINBOW ON TAPE does not include OS-9 programs or those less than 20 lines.)

Need a back issue of RAINBOW ON TAPE?
Issues available beginning with April 1982

For greater convenience, order RAINBOW ON TAPE through the shopping area of the CoCo SIG of Delphi!

Subscribe to RAINBOW ON TAPE Today!

LOOK FOR OUR ORDER CARD BETWEEN PAGES 34 AND 35

The cost for a single copy of RAINBOW ON TAPE is $10 within the United States; U.S. $12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is $80 within the U.S.; U.S. $90 in Canada; and U.S. $105 for all other countries. **U.S. currency *only*, please.** In order to hold down non-editorial costs, we do not bill.

NOW AVAILABLE ON DELPHI!

For your convenience, RAINBOW ON TAPE can also be ordered via the Delphi Information Network, in our Shopping Service area of THE RAINBOW's Color Computer SIG (Special Interest Group).

The individual programs from our past August issues are also available for immediate download in the RAINBOW ON TAPE Database area in THE RAINBOW's Color Computer SIG on Delphi. There is a $3.50 per program surcharge.

RAINBOW ON TAPE is not a stand-alone product, but is intended as an adjunct and complement to the magazine. Even if you purchase RAINBOW ON TAPE, you will still need the magazine for loading and operating instructions.

To order by phone, (*credit card orders only*) call 800-847-0309, 8 a.m. - 5 p.m. EST. All other inquiries call 502-228-4492.

Programs from Our Past Games Issues:

August 1985 — *Brotan the Blue*, a game based more on luck and risk than on skill; *Quest for the Falcon's Lair*, a game that lets you fight for Earth's freedom; *Random Mosaics*, a graphics program: *Soccer Instructor*, a text and graphics game instruction for soccer novices; *Operation Feedom*, a game to save captive scientists; *Hello*, a disk utility solution for the directory's too-speedy scroll, *Earthrot and Pageturn* graphics programs which simulate the spinning Earth; *A Caterpillar's Alphabet*, an educational game designed to teach the alphabet to preschoolers; *Oodles of Games for 4K*, six short games to amaze and amuse; *Amphibia*, an alien planet's moon base destination game; *Phone*, a home help program that showcases your phone messages; *Sir Eggbert Jumper*, a one-player game with a "swords and sorcery" theme; *Doghouse*, a short game to challenge visual reflexes of everyone from toddlers to adults; and *Vision*, a health education program that tests your eyesight.

August 1984 — *The Jungle*, a game of survival on safar without joysticks, *The Dragon's Gold*, climbing to the top of his lair is a very dangerous game; *Trapperr*, an error trapping utility; *M*A*S*H Trivia Quiz*, 200 questions to test your memory, *Instrument Flight Simulator*, a serious exercise in flight simulation; *IRA Projection*, a finance program to project IRA earnings: *The Trip*, a mix of Adventure and arcade-type games; *Stock Market*, second part of a tutorial on writing a Simulation; *Air Raid on the Keyboard*, a game to sharpen reflexes, *Olympics*, a graphics program that displays the universally known connecting rings, *Disk Drive Speed Check*, a disk utility, and *Expanding BASIC*, part II on enhancing DOS.

Software Review

Pinball Factory Rings Up Points

I've never been a big fan of computer pinball — until now. I've tried practically every CoCo pinball game on the market, and while most of them have been good, after a few games I would invariably become bored. After all, these games only offer the choice of a few playing fields, and even the most diehard pinball fan is sure to soon tire of playing the same game over and over and over.

Enter *Pinball Factory* from MichTron, a terrific new game which not only lets you play pinball on your CoCo, but lets you create your very own pinball game. *Pinball Factory* is similar to *Pinball Construction Set* on the Apple, and it puts new life into a very old game.

Pinball Factory comes on disk and is accompanied by a set of easy-to-read, complete instructions. I was glad to see that the disk was not copy protected and was accompanied by instructions on making a backup disk for your own use. Loading the game is as simple as putting the disk in the drive and typing RUN "PINBALL". After the title page appears, you have the option of playing the current game, loading a new game from disk (eight sample games come on the disk), modifying the current game or creating a new one, saving your creation to disk, or taking a directory of the pinball files on the disk. The program requires only one drive, but can use a second drive if you have one.

Load a game by moving the on-screen pointer with keyboard, mouse or joystick to the section of the screen marked LOAD and press ENTER (or the joystick button) then point to the file you want to load and press ENTER again. There is no need to type in the filename from the keyboard. Because the pinball data files are stored in a special format, they do not appear on the disk directory, and the manual warns not to save any other files on your pinball diskette.

Once loaded, selecting Play from the screen lets you play the current pinball game. You then have control of the two flippers and can "tilt" the board in one of three directions (left, right and up) to make the ball go where you want it. The graphics are in black and white only, but are quite good nonetheless. The animation is good and, except for a few rare moments, flicker-free. Sound effects are adequate, but not diverse. Pause and Quit options are provided.

The area in which *Pinball Factory* shines is in the creation and modification of your own pinball games. You can control the placement of everything except the flippers; you can even design your own high-resolution graphics logo for your pinball game. You can place bumpers of varying types around the board. When the ball hits one of these, you score a certain number of points — it is up to you how many points each type of bumper is worth, as well as how many points it takes to earn extra balls — and your ball is deflected back at a fast speed. There are even "multirail" bumpers which provide bonus points if all rails are hit. *Pinball Factory* also allows you to place polygons anywhere on the board. These polygons act only as physical obstructions, yielding no points and hindering the balls. They may be used to change the shape of the playing board or increase the challenge. Once placed, any object on the board can be removed or changed, and the program provides a test option for trying out your creation. Up to 90 objects may be put on the playing field.

Once the playing field is set up, you can change the rules of the game. This includes setting the speed, the pull of gravity on the ball, the number of balls, and the elasticity (which controls how fast the ball will bounce off an obstruction). As I mentioned before, you can also change the scoring rules, thus making the games harder or easier.

Overall, this is an excellent game. Unlike past pinball games, *Pinball Factory* puts you in control of the entire pinball game, letting you tailor games to your particular liking. You can even design pinball games with friends and have a pinball marathon or competition. Because *Pinball Factory* does not lock you into a particular game, it kept my interest, as I'm sure it will yours. The only minor bug I found was that the selection (menu) pointer scrolls off the screen in one direction but not the other, which was sometimes annoying, but doesn't affect game design or play.

Suggestions? MichTron could have included more features to build a pinball game from, such as ramps, optional flippers, moving targets, etc., or a feature to let the user design his own bumpers or polygons. Letting the user create his own sound effects or background music would have put the icing on the cake, but *Pinball Factory* is a most enjoyable game as it now stands.

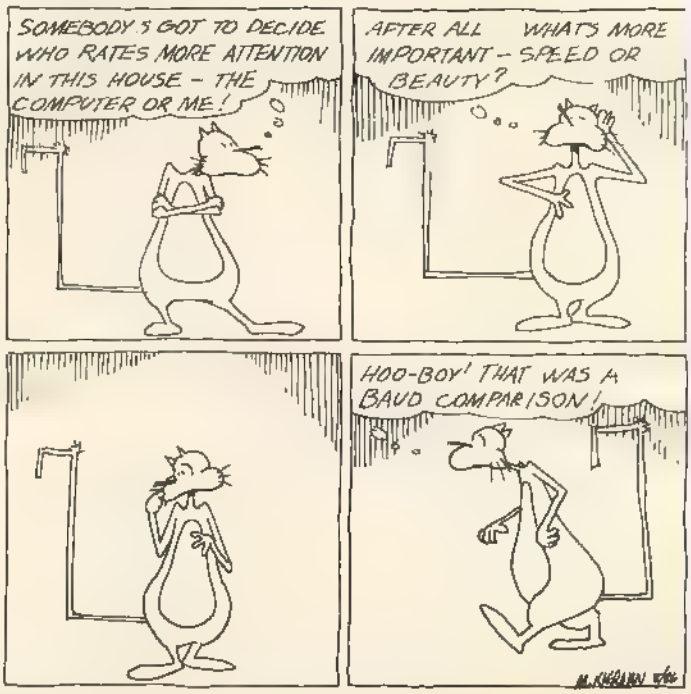
On a scale of one to five, I would rate *Pinball Factory* as follows: playability, 5; sound effects, 3; keeps interest, 4; price vs. value, 3; graphics, 4; speed/animation, 4; documentation, 4; and overall rating, 4.

As a final note, I was impressed by the trust MichTron puts in their customers. Not only was the game able to be backed up, but MichTron offers a guarantee of satisfaction and a 30-day warranty. If you even remotely like pinball, I think you can trust that you'll enjoy *Pinball Factory*.

(MichTron, 576 S. Telegraph, Pontiac, MI 48053, 313-344-5700, 64K disk required, $34.95)

— Eric Tilenius

CoCo Cat



Darkmoor Hold: A Valuable Software Library Addition

Wandering through the dimly-lit corridors of a mysterious castle in search of adventure and riches is a daydream many of us romantics share. Until the CoCo came along, dreaming and reading were the extent of my fantasies. Now with software such as *Darkmoor Hold*, by Prickly-Pear, I can finally wander to my heart's content.

Darkmoor Hold is a graphics Adventure/Simulation that puts you, a human mercenary, in charge of a trio of adventurers hired by the ruler of a troubled kingdom. It seems an evil wizard is killing the king's beloved taxpayers and he would like you to remedy the situation. The wizard's castle, Darkmoor Hold, is comprised of 10 levels, each consisting of 20-plus rooms. You must survive all 10 levels while gathering better armament and treasure on the way. Since I was only able to get to level six, I can't testify as to what happens when you finally reach the wizard on the 10th level.

Darkmoor Hold has a different format than most Adventures on the market. In fact, it may be closer to a fantasy Simulation than an Adventure. The screen has the appearance of an ancient parchment scroll and is split into several parts. The top one-third shows a 3-D graphics representation of the rooms and corridors through which you wander. The bottom two-thirds is divided into three columns, allowing you to enter commands for each of the three adventurers. You, the human, a small but powerful Dwarf and a magical Elf make up the trio. The commands you can enter are predefined and consist of just under 20 choices. Examples are directions, search to find objects, fight to defend yourself and inventory. As my combat experience proved, 80 percent of the time you will find yourself entering fight. To call this game a slugfest would be putting it mildly. While I'm sure there are strategies to be developed, most of the time it's hard enough just staying alive.

Traveling through the various levels you face creatures of increasing power. On each level all the creatures look the same and only the Elf can correctly identify them. The graphics for the rooms and creatures are all very well-done and add considerably to the enjoyment of the game. In addition, for those of you who find spare time hard to come by, the game has a SAVE and LOAD feature allowing you to explore a little at a time.

The program is not copy protected, has a guaranteed free replacement for as long as you own it and is supported by some of the most considerate people I have ever done business with. There are many good companies selling CoCo software today and I can testify, without hesitation, that Prickly-Pear is one of the leaders.

I liked the program and would recommend it to any fantasy buff. I do feel, however, that the more experienced adventurers and role players out there might find the challenge a little too limited for their tastes. On the other hand, inexperienced adventurers who want a sample of Dungeon exploring, would do well to consider this program for their library.

(Prickly-Pear Software, 2640 N. Conestoga Ave., Tucson, AZ 85749, 64K ECB and one disk drive required, $29.95)

— Ken Boyle

Two-Liner Contest Winner . . .

This one allows you to enter the number of options on your gameboard's spinner. Then it will randomly select one. It might even eliminate those spats about how you "accidentally" bumped the spinner to alter the outcome

Wizard's Castle — Great for Novices and Pros Alike

If you remember those Saturday afternoons when you lay in front of the TV and watched the Good Guys save the Princess, you have the premise of *Wizard's Castle* in a nutshell. Don't let me fool you into thinking that it will be quite as easy as that, however. This is a very pleasantly frustrating game.

Wizard's Castle, a graphics Adventure game, comes with excellent documentation. It includes a list of verbs and nouns to use in playing the game. It also covers the creatures you have to kill in order to save the Princess. Remember the descriptions of these creatures or you may try to kill one that just might help you.

One of the frustrating things that makes this game hard is not only do you have to kill the creatures, but just when you think everything is fine, the wizard brings them back to life. Even if you manage to hack the wizard to death, he can come back to life, too. Some of the creatures, like the Orc, follow you around. Others, like the Gnome, will just take all your coins, laugh and leave.

One of the saving graces is the "eerie glow;" just when you think you're going to die, it surrounds you, rejuvenates you, and the game goes on. The game also includes a help function which, if you ask the right question, will give you clues. To keep it interesting the author used riddles for the clues.

The help you receive is dependent upon your status in the game. There are three variables in *Wizard's Castle* condition, score and experience. Condition is your physical strength and varies with how many dragons you've fought and how well you've done. In wandering around the kingdom you may find apples to eat or water to drink and they will boost your condition. And if you get lucky, the eerie glow will surround you and really give a push.

During your travels you find any of 24 different objects. If you can manage to get these back to the King, you are awarded points (either as score or experience, or both). Experience points can also be earned by actions like killing your enemies. Experience points are needed to be able to do some of the actions in the game. But, with more experience, you fall into more traps. You have the option of trading score for experience. The only thing I could not understand from the documentation was what the score points were for except buying experience.

There are three levels of play. In level one the creatures are a little easier to kill, points are easier to earn and it just seems you are luckier. Level three is hard; even moving through the game drains some of your strength away. The creatures are harder to kill, they're trickier, and traps pop up more often. The documentation states that level three should take about eight hours (or more) to play. The game is in real time, so even if you don't see a cyclops waiting when the screen comes up, don't sit still too long or he may come after you.

There are several nice features with this game, such as the Freeze command. To stop and think, you can enter FREEZE and the game is on hold until you want to play some more. You can also save the game you're playing onto the game disk to be able to pick up where you left off. *Wizard's Castle* will talk to you if you have a Radio Shack Sound/Speech Cartridge, but I didn't think it helped much (at least, it didn't tell me how to win). To quit, type UNCLE, and you can start all over.

Even though *I* never saved the Princess, I believe you will find *Wizard's Castle* well worth the money no matter what your level of expertise with Adventures. It is easy enough for those of us who play just for relaxation; and difficult enough for the die-hards who think they can master anything.

Hint . . .

Disk Directory Printout

If you have a long disk directory and want to see all of it, or if you simply wish to have a hard copy printout of your directory, one simple command allows you to do this easily.

Just POKE 111,254:DIR and the entire disk directory will appear on your printer, even if it is too long to be fully displayed on the screen.

Rescue Your Disks with *Salvdisk*

Salvdisk (salvage disk) is a machine language utility for salvaging information from a damaged disk. It may be used with files consisting of BASIC, machine language programs or data. Using *Salvdisk*, you can copy one granule at a time to either another disk or a different granule on the same disk. After moving a file, you can modify the disk directory to use the data in its new location. *Salvdisk* requires a Color Computer with a disk drive and 32K of memory.

Salvdisk is supplied on a disk without the usual instructions. (But instructions *are* provided.) After doing the machine language LOADM "SALVDISK" and EXECuting, a title page (with copyright notice) appears. At this point, press any key to continue. The second screen asks whether you desire written instructions. If you respond with a 'Y', the program allows you to select the Baud rate, and the instructions are sent to the printer. If you're familiar with the program, this can be bypassed by responding with an 'N'

Having entered the main part of the program, you are given a choice to Load Granule, See Granule, Dump Granule, Alter Directory or Return to BASIC.

Load Granule reads the specified granule's contents into CoCo's memory. (Granules one through 68 store files; granules 69 and 70 comprise the directory.)

See Granule displays the contents of a previously loaded granule one sector (256 bytes) at a time. The display, however, is generally illegible — showing primarily graphics patterns and an occasional identifiable character.

Dump Granule allows you to write a previously loaded granule into a new granule of your choice. You may want to write it to the same granule number on another (undamaged) disk, or write it to an unused granule on the damaged disk.

Alter Directory allows you to update the directory after moving a granule (or granules) around. Without this step, the computer would not know where to look for the relocated file.

Return to BASIC allows you to test modifications without having to turn off the computer and accessories. This is convenient because a test file (called "try it") is created when you modify the directory. By using EXEC, RUN or read, you can confirm the correctness of your work.

Being a relative newcomer to the world of disks, I have not (yet) crashed a disk. But I know it's just a matter of time, so I welcomed the opportunity to review this program. Unfortunately, I was disappointed. In order to use *Salvdisk*, it is imperative to be able to identify the granules associated with each file. This task would be easy if I could use the program to read the contents of each sector and granule, but the resulting display when I "view" the granule is predominately graphics patterns with only rarely identifiable characters.

I tried this program with both binary and ASCII files without success. I called the author to discuss my difficulty, and he explained that this was normal. He also explained that determining the granules that contain a program is accomplished through trial and error. And to further complicate the salvage procedure, the granules must be relocated in correct order, while the order on the damaged disk is not necessarily consecutive — the granules comprising a program may be numbers 34, 35, 50 and 26. When salvaging these, they must be relocated in the correct sequence. In other words, I have to write granule 34 first, then 35, then 50, then 26 to consecutive granules on the new disk — 10, 11, 12 and 13, for example. And, the correct order can only be determined through trial and error.

I also tried, unsuccessfully, to identify the starting granule of the test program by reading the directory (using the read granule activity on granules 69 and 70, as specified in the instructions).

The two pages of instructions are neither complete nor well-written, but are sufficient to experiment with the program.

In summary, attempting to use this program reinforces the necessity of making frequent backups of critical disks. The distribution of *Salvdisk* is unique, in that the author has not set a price; rather, he will send you a copy of the program if you send him a formatted disk. When you execute the program, one of the opening screens explains that the author would appreciate a donation if you find *Salvdisk* useful.

BASIC COMPILER

WASATCHWARE believes that users of the Color Computer deserve the right to use all 64K of RAM that is available in the computer and have fast machine language programs that use the full potential of the 6809 microprocessor. That is why the BASIC compiler, called MLBASIC was developed. Here are some of the reasons that make this compiler one of the best bargains in this magazine:

- Use all 64k of RAM for program storage and/or variables
- 32 bit floating Point arithmetic expands 6nk with functions
- Full sequential and direct access disk files allowed
- BasIC source and M.L. output I/O to disk, tape or memory
- Many new commands that expand your programming capability

Commands Supported

1. I/O Commands
CLOSE CLOADM CSAVEM DIR DRIVE DSKI$ DSKO$ FIELD FILES
GET INPUT KILL LSET OPEN PRINT PUT RSET USING

2. Program Control Commands
CALL END EXEC FOR STEP NEXT GOSUB GOTO IF
THEN ELSE ERROR ON GO RETURN STOP SUBROUTINE

3. Math Functions

Action-Packed *Rommel 3-D* Requires Practice

With anxious hands, you hold the controls of your death machine in hopes of finding the enemy. The mission appears simple, but you know in your heart that this will be one of the harder missions you face.

Rommel 3-D is a game of speed and skill. You have a tank that must seek and destroy other tanks and planes trying to destroy you. As you destroy them, you receive points and if you gain enough points you receive bonus tanks. The challenge is to develop a strategy that enables you to increase your scores constantly.

A joystick is not needed to run the game. Use the arrows, or the 'P', 'L', 'W' or 'Q' keys to move and the space bar to fire the cannon. Scoring is accomplished by directly hitting the enemy tanks or planes. Points are given for hitting three different things: dumb tanks worth 1000 points, smart tanks worth 1500 points and planes worth 1300 points. You receive one bonus tank for every 10,000 points you get until 100,000 points after which it takes 20,000 points to get a bonus tank. On the screen you see flat land with mountains on the horizon. Scattered around this land are various obstacles you cannot move through. The enemy vehicles are three-dimensional tanks or airplanes in various colors. In the middle of the screen are the sights for your tank. They become smaller when an enemy tank or plane is in firing range. In the upper right hand corner there is a radar screen. Your tank is the center of that screen with other vehicles appearing as blips in relative position to you.

The only way to win at this game is to practice. If you get in trouble, move your tank backwards and to the left or right very fast and maybe you won't get hit. The only strategy that worked for to me was to keep moving.

When I played this game I got killed very fast at the beginning, but as I played I did get better slowly. The game is a challenge, fast moving and fun. If you are into action-packed war games then this game is worth looking at.

(MichTron, 576 S. Telegraph, Pontiac, Michigan 48053, 313-334-5700, 32K required, disk $29.95)

Clever Animation in *Adventure in Mythology*

Fans of graphics Adventure games will enjoy Saguaro oftware's new game, *Adventure In Mythology*. The 64K iachine-language game is available on tape or disk. The isk can be backed up, but the backup copy will not run. In loading the backup copy, you get a message that says ie files can be recopied to the original disk if necessary.

The game does not load from JDOS or from the disk ersion of ADOS. I had no problem with DECB 1.0. ccording to the instruction sheet, the game can be used ith the Tandy SSC Speech Sound Pak. But even without iat accessory, the game is not totally silent — there are its of music and sound effects built in.

Adventure In Mythology comes in a simple, yet most ttractive package. The instructions are short and to the oint.

The graphics are cleverly animated. For example, when ou are in a rain forest, you can actually see the rain coming own. If you have a key to open the castle door, you see t open up.

As the name of the game implies, the Adventure is based n the popular tales of ancient mythology. Among the haracters you encounter are King Minos, Ariadne, Icarus nd Galatea, just to name a few. "Your goal," we are told, is to win the hand of the beautiful Atalanta, the swift-unning huntress." I never got to meet her, though, because kept getting mugged by bandits, trapped in inescapable ooms, drowned in the ocean and tripped up in the darkness of the famous Labyrinth.

Like other games of this type, *Adventures In Mythology* an take many hours to play, so you'll find the ability to ave a game in progress and reload it later very handy. The isk actually allows ten different saves — so you can save ne game at several landmarks along the way. Then if you et killed, you can go back to any of those saved points and try again from that point.

(Saguaro Software, Box 1864, Telluride, CO 81435, tape $24.95, disk $27.95)

— Neil Parks

Hint . . .

What's Your ROM Version?

With all the talk about new ROMs, you may be wondering exactly which ROM you have. If you have an older CoCo with Extended BASIC, just read the version number of your Extended BASIC at the top of the screen on power up. Then, to see which Color BASIC ROM you have, type EXEC 41175 and press ENTER.

If you have the new ROMs, Extended BASIC will be Version 1.1 and Color BASIC will be Version 1.2.

On the CoCo 2, Color BASIC will always be Version 1.2 or 1.3 (which are functionally identical).

Take a Chance — Play *Skance*

Do you like games of chance such as Yahtzee or dice? Do you like to go one-on-one with your computer and sometimes win? If so, you're a likely candidate for *Skance*.

The program is written entirely in BASIC and requires a 16K CoCo with Extended Color BASIC.

When I ran the program, the instructions were simple and straightforward. Besides the instruction screen, there are four other screens you will use: The Player Screen lists all of the players, the Score Screen shows the current scores, the Dice Screen shows the dice being rolled and the Winner Screen gives the winner's name and score.

After the instructions, you are asked how many people will be playing. Up to four people can play or you can play against the computer.

The object of the game is to score as many points as possible. To score, you need to stop rolling the dice before your point number comes up a second time. Your point number is the first number you rolled.

The game consists of seven rounds of play. After the seventh round, the winner's screen comes up and displays the winner's name and score. Although the computer keeps track of all players' scores and who is playing, once a player begins rolling the dice, there is nothing displayed on the screen to tell the players who is rolling. We found this to be a problem.

After you decide how many people are going to play, the screen indicates whose turn it is. There are two options: press the 'A' to roll the dice or press the 'S' to see the current scores. If the 'A' is pressed, a screen comes up showing two dice. After each roll, you are given three choices: roll again, see score, or next player. These are chosen with the 'A', 'S' and 'N' keys. If any other key is pressed, your turn ends and the next player is up.

This game requires no skill to play, but if you like games of chance, this may be for you.

(Bob's Software, P.O. Box 391, Cleveland, OH 44107, send formatted disk and return postage.)

— John H. Appel

Lonnie McClusky
Toney, AL

(For this winning one-liner contest entry, the author has been sent copies of both *The Rainbow Book of Simulations* and its companion *The Rainbow Simulations Tape*.)

Portraits of Christ Presents the Gospel of John

Get out your copy of *2010* by Arthur C. Clarke and you'll see in the introduction he reveals that the entire text of this novel was mailed from Sri Lanka to New York on a single diskette. He was heralding the arrival of the age of technology. Now, in the same tradition, is the book I received for review from Sovereign Grace Software, *Portraits of Christ*.

Two CoCo-formatted diskettes contain ASCII text files which can be loaded by your word processor and read on-screen or printed out. Both the documentation and an introductory file explain the screen and printer formatting necessary for proper hyphenation and paging. Using *Telewriter*, all files loaded without a hitch. Following the formatting parameters produced a well-organized screen layout of 63 characters per line and a printout properly paged and aligned. (A call to the author, Pastor Mark Camp, indicated that the disks now contain a program *A Print*, that can be run to get a hardcopy without a word processor of your own.) There are 21 chapters plus a title page and disk information file.

The book is essentially a discussion of the New Testament Gospel of John. It presents the idea that a unique aspect of Jesus Christ is emphasized in each chapter of John. Sample titles include "Jesus Christ — Consoler" and "Jesus Christ — King."

In the 15th century, the Spanish mystic Fray Luis de Leon published a work called *Los Nombres de Dios* (The Names of God) which approached the idea with the same method for the entire Bible. But *Portraits of Christ* is not just a theological discussion. The nature of *Portraits of Christ* can be accurately described as fundamental Christianity. Its stated purpose is evangelical.

I got the feeling that each chapter may have originally been a sermon delivered by its author. Each chapter concludes by directly addressing the reader to encourage a decision of a spiritual nature.

To sum up this offering by Sovereign Grace Software without bias, it is a literate, well-prepared presentation of the Gospel of John written for the purpose of teaching about the nature of Jesus Christ from a perspective of evangelical, Protestant Christianity.

Pastor Camp told me that he would like $10 for the two-disk set but admitted he is willing to accept donations of any amount as well. He is, not surprisingly, more interested in spreading the word than reaping profit.

(Sovereign Grace Software, 221 Highview Dr., Ballwin, MO 63011, 64K disk $10)

Check out *Computer* and *Business Bankbook*

By Neil Parks

Sunrise Software has two new programs available that not only serve as check registers, but also print checks. If you pay the same creditors every month, this could prove to be a real work saver.

Computer Bankbook is designed for home users. *Business Bankbook* — available in two versions — is a similar program designed for business users. Both programs are 100 percent BASIC and come on disks that can be backed up. Both come with a "code plug." This bit of hardware plugs into the right joystick port, and without it the program is unable to run.

Since *Computer Bankbook* is a BASIC program with no machine code, it should be compatible with all operating systems, but it isn't. The disk I tested appeared to run properly under JDOS, but certain data fields, which I wanted to leave empty (as permitted by the program), were filled with random garbage. Attempts to edit the data via the program's edit routine resulted in various crashes and/or loss of entries.

I had no problems with DECB 1.0 or the disk version of ADOS, so I presume that the problem with JDOS is caused by differences in direct-access disk formatting, but I don't know. Copying the program to a JDOS-formatted disk did not help.

The program ends by cold-starting the computer (POKE 113,0:EXEC 40999). With the disk version of ADOS, there is garbage on the screen, but pressing the Reset button restores the built-in DOS. *Computer Bankbook* is a natural for ADOS's RSV high-resolution text screen — or would be, but for some superfluous semicolons which should be removed from the menu-printing routines. The Edit screens actually work much better with RSV than they do with the regular 32-by-16 display.

The eight-page manual is well-written and easy to understand, though a couple of points were left out that probably should have been mentioned.

The first step in setting up the check register is to enter a beginning balance. Although there are only seven items on the main menu, the beginning balance is selected by pressing '8'. That was probably done because, after entering the balance, you won't use that routine again for a year.

There are two ways to enter checks. If you are going to have the computer print your checks, you use the Check Printer routine. When each check is printed, it is automatically entered into the register. For creditors you pay on a regular basis, enter their names and addresses into a file. Then every time you want to send a check to one of those creditors, you call up that file. Enter the last check number used, and the check or checks printed are properly numbered.

There is also the option of special checks, for which the name and address of the payee is not stored in the file.

The second method of entering checks in the register is also the method for entering deposits — the Add Checks/Deposits Manually selection. The manual suggests that you may wish to use the Check Printer routine in preference over the Add Manually option even if you don't plan to have the computer print your checks. Personally, I disagree. I found the Add Manually option much easier to use.

(The manual says that if you wish to use the Check Printer routine without actually printing checks, you must change one line from a GOSUB to a REM. What they forgot to mention is that this change affects only the regular checks, not the special ones.)

Although the manual doesn't make it clear, all checks and deposits must be entered with a two-digit month. For example, January 25 has to be 01/25, not 1/25. If you enter the month with only one digit, the entry is accepted, and the check is printed properly. But the routine that prints out the transactions for a particular month keys on those two digits, so any entry with a one-digit month is omitted from the listing.

The day can go either way — 12/4 and 12/04 are equally acceptable. The year is optional. Although the *Computer Bankbook* manual doesn't expressly say so, it becomes obvious that one year is the maximum length for the file, because the printout for one month doesn't key on the year.

All entries for a given month must be consecutive. Otherwise, the balance column in the printout for that month will look strange. This may cause a slight problem if you write a lot of checks early in the month, before you get your statement and find out how much interest you

arned for the preceding month. But you can always date he interest deposit as of the first of the new month to get .round that. Again, this is a point that should have been nentioned in the manual but wasn't.

Each check is considered to be outstanding until you ndicate, either on entry or editing, that it should be canceled cleared). When you get your monthly statement from the ank, just print out a list of outstanding checks. A total will e printed with it. Add that total to the present balance and, f it agrees with the bank's balance, you've made balancing our checkbook quick and easy. (Deposits are considered anceled on entry, but you can always edit one to outstanding if it occurred too recently to be on the bank statement.)

Each check and deposit may be assigned an account umber. Here's where the program really proves its value. You can print out a list of transactions for each account umber, for any one month or for the entire file, and the ist will be automatically totaled. For example, let's say all your checks for charitable organizations are assigned to account 18. Tax time comes and you want a total of charitable contributions — it's as easy as printing out account 18 for the year. For this feature alone, *Computer Bankbook* is well worth twenty bucks.

There are a few quibbles, albeit minor ones. Author James Goldsberry did not make allowances for writing a check larger than $999.99. The program can handle it, but the printout looks strange because it exceeds the "print using" format. (Four-figure deposits and balances look OK.)

There is a slight inconsistency in those routines that require a Y/N response. In some of them, the ENTER key is interpreted as Yes, in others as No, and in yet others as no response. Obviously the third situation is the most desirable and should have applied in all cases.

When you enter the beginning balance (via menu option 8), I suggest you enter the amount as zero. Then, as your first transaction, post a deposit in the amount of the balance. Use the edit function to change the name from "deposit" to "beginning balance" or "balance forward" or whatever. That way, if you ever need to recall the file for a prior year, you don't have to make any adjustment to the beginning balance. This method lets you use the same disk for more than one checking account at the same time — your personal account, your spouse's account, a joint account, etc. When you finish working with each account, just copy the CHECKS.INF file to a library disk under the name of your choice, and recall the one wanted by killing CHECKS.INF on the system disk and copying the appropriate file in its place. You can have several years for several accounts stored on one library disk. That makes more sense to me than creating a new system disk for each account file, as the standard procedure would require.

Business Bankbook is essentially the same program, with a few added features. The main difference is that instead of assigning each transaction to one account, you can assign up to four accounts. So if an invoice includes merchandise cost, freight and tax, for example, each of these components can be posted to its own account. Enter the amount for each account, and the total is calculated automatically.

Business Bankbook comes in two different versions. System I (also known as Bank 7.1 or 7.3) uses one disk drive. System II (alias Bank 9.1 or 9.3) assumes two drives — one for the system disk and one for data storage. The beginning balance entry appears on the menu in *Business Bankbook*, but works the same as in *Computer Bankbook*. (With System II, my alternative method of the zero beginning balance becomes even more useful: You don't even have to kill and copy files to go from one to another. Just rename the appropriate file on the data disk to or from CHECKS.INF.)

The 10-page manual for *Business Bankbook* was apparently written some time after the other one, because it does mention that each file should contain one fiscal year, and it does not suggest using the check printer routine to enter checks without printing them.

I did not test *Business Bankbook* under the non-Tandy operating systems, but since the two programs use similar direct-access disk I/O routines, I would expect the results of such a test to be the same as they were for *Computer Bankbook*.

Business Bankbook allows you to enter a table of Active Accounts, consisting of any account numbers you regularly use, and a name for each account. This chart can be printed out at any time, and will appear in numerical order even if you didn't enter them in order. Also, the account names in the table appear on the check vouchers.

Unfortunately, there are two bugs in this routine. In the Edit mode, you are asked if you want to change the account number or account name. But any change in the account name erroneously produces a random change in the number, and any attempt to change the number fails. Also, if you use an account number that is not in the table, the check printing routine puts an inappropriate name in instead of a blank space. There is one line on the System I program that says RUN BANK.10. However, BANK.10 is a file which occurs only in System II. Somebody didn't debug as thoroughly as he should have.

On the plus side, by the time *Business Bankbook* was written, Mr. Goldsberry corrected the inconsistency in his Y/N routines, so that only a 'Y' or an 'N' would be accepted as a response.

Business Bankbook also has a routine called Convert that allows you to convert your *Computer Bankbook* files to the *Business Bankbook* format if you want to upgrade. The *Business Bankbook* manual says that a *Computer Bankbook* file of about 300 records takes seven granules of disk space. After conversion to the *Business Bankbook* format, the same data occupies eleven grans.

The manuals for both *Computer Bankbook* and *Business Bankbook* state that the check printing routines are expressly designed for use with Nebs Computer Forms tractor feed checks #9025-1, and that Line Printer VII, DMP-100, and possibly other inexpensive printers can't handle such heavy paper.

With each program comes a checklist to fill out and send in if you have occasion to write to Sunrise Software. "Please outline the problem you encountered in as much detail as possible," says Sunrise. "We will do all we can to help you solve it." I like that.

(Sunrise Software, 8906 NW 26 St., Sunrise, FL 33322, *Computer Bankbook*, 32K, one disk, $19.95; *Business Bankbook*, specify System I for one drive or System II for two drives, $49.95; $2 S/H)

New Modem Pak is 'Interesting'

The new Modem Pak from Radio Shack is quite an interesting piece of equipment. As a hardware item it exhibits a concept that is very useful to the Color Computer user. Imagine, a modem you just plug into your CoCo's cartridge port.

Those who have learned the hard way and upgraded from Commodore to the CoCo may remember the old Vic modem. This new modem from Tandy goes a bit further than that one, though. The old Vic modem required the use of a tone capable telephone with a removable handset. The Modem Pak works with either a tone or rotary line and is direct-connect. Just plug the modem into the phone outlet and dial the number with your family phone.

The Modem Pak is a good, basic telecommunications package all wrapped into one small plastic case. It includes the interface to its internal 300 Baud modem via a 6551 ACIA. It also includes communications software in ROM.

The Modem Pak is very easy to operate. If you are using the Multi-Pak Interface, you can put the Modem Pak in slot one, two or three, and then set the selector for the appropriate slot. If you are not using the MPI, just plug the Pak right into the side of the CoCo. Then plug the unit into the phone line, type EXEC &HC000 and you are ready to go. A menu of options appears on the screen. If you press the space bar, a second menu appears. Press it again to return to the first menu.

Several options are included in addition to the standard parameter options. Besides being able to alter the standard communications parameters, you can adjust the printer Baud rate, Xmodem timeout, cassette and printer buffer sizes, and turn the ASCII filter on or off.

The internal software lets you switch the printer Baud rate between 600 and 1200 Baud. Unfortunately, it does not allow you to go any higher than this. My printer likes to operate at 9600 Baud.

The Modem Pak does allow the use of the Xmodem protocol for file transfer. However, any files to be transmitted must be in ASCII format. Also, there is no provision for the user to supply addresses if he or she wishes to save a machine-language program from the buffer to a tape. I found this implementation of Xmodem to be very awkward, primitive and limited. It would still be advisable for users of this product to transfer files using the ASCII transfer method, which seems to be pretty reliable.

The ASCII filter option is very useful. When this optic is turned on, all control characters are stripped from tl transmitted data. Any characters over 80 Hex are filtere out. If you want to transmit data containing graphics cod or special key codes, just set this option to "off."

A very interesting feature of the Modem Pak is its "dua combined" buffer. When communicating, there are tw buffers; a cassette buffer for data you may want to save an a printer buffer for sending data to the printer. The tot. combined buffer space may not be more than 28K, but yo can use any configuration of cassette and printer buffer size not exceeding this limit. I found that, under most circum stances, a printer buffer size of 1K is more than enough The only time data stays in this buffer is if the printer offline. Otherwise, if the printer function is turned on, a received data is immediately sent to the printer as well a the screen. This is great for getting a hard copy while online

With the cassette buffer, you may save or load data t or from tape, clear the buffer, or view its contents. Thes features are very useful additions to transmitting data fror or receiving data into the buffer. They will benefit mos users.

A feature that will benefit CoCo owners with 'B' revisio CoCo 2s is the true lowercase option. If your CoCo is se up to use the new VDG Tandy has been using, the Moden Pak can recognize this and be set so that you get true lower case during communications.

One thing I thought was poor was the lack of suppor for disk systems. As it stands, the Modem Pak works only with tape-based systems. This is because the software i ROM makes it very difficult to work with the disk. The uni is set up so it can operate under OS-9 version 2.00.00 provided you have the M1 or M2 driver and the appropriate descriptor installed. In this case, it will work with a disk system. Who knows? Maybe Tandy has some future terminal package software plans in mind. It sure would be nice, however, to use this package under Disk Basic.

The ROM based operating software of the Modem Pak is much enhanced over that included in the Deluxe RS-232 Pak. The unit itself is a great step in the right direction. However, I feel certain additional features would have increased the value of this product. For instance, inclusion of an RS-232 jack on the side would have allowed use with external modems. Along with this, Tandy might have included a provision for altering the communications Baud rate when using an external modem. With prices dropping, many people are going the extra bit and buying 1200 Baud modems. It is a shame they won't be able to use them with the Modem Pak. Also, I feel the inclusion of what Tandy calls Xmodem is nothing more than a waste of good ROM space. They might as well have left this "feature" out.

Despite any shortcomings, the Modem Pak is a well-built piece of equipment. The documentation is more than adequate and covers all phases of operation. In their usual style, Tandy has included the schematic and programming examples for controlling the modem in BASIC or assembly language. I can recommend this unit for those who do a moderate amount of telecommunicating. Its relatively low price far outweighs its shortcomings for these people. I'll give the Modem Pak a three-star rating on my four-star scale.

(Tandy Corp., available in Radio Shack stores nationwide, $89.95)

Interactive *Wishbringer* — A Stimulating Challenge

On a scale of one to 10, I'd give *Wishbringer* 9.95+ points. *Wishbringer* is an interactive fantasy — you interact with the program to create a story with many possible solutions. Unlike many Adventure games, which accept only two-word phrases (typically a verb and object), *Wishbringer* encourages you to talk to it in complete — even compound — sentences. Every aspect of this package has been carefully designed and implemented.

To enjoy this fantasy, you need a CoCo 2 with 64K of memory and a disk drive. Optional items include a second disk drive and a printer.

The object of this fantasy is to free the seaside village of Festeron of trolls, vultures and fortress-like towers. At the fantasy's beginning, you are a postal clerk, with the task of delivering a strange-looking letter to the local Magick Shoppe. When you succeed in reaching the shop, you learn that the proprietor's cat has been kidnapped by the Evil One. She asks you to rescue her cat, and in return she will give you a stone with magical powers — Wishbringer. Upon leaving the Magick Shoppe, you discover that the once quiet and peaceful village has become a battleground between the forces of good and evil. Only you, with the magical assistance of Wishbringer, can rid the town of its evil inhabitants.

The documentation supplied with this program is superb. The 25-page, color instruction manual contains the legend of Wishbringer and complete operating instructions. Suggestions are presented for the novice, and even a sample script is included to illustrate how the fantasy develops. Instructions are given to save a position in the fantasy and to restore to that point. Additional instructions allow you to send the actual script you create to the printer. Appendices describe system commands, list some recognized verbs, explain error messages (called Wishbringer Complaints), and present copyright and warranty information. Appendix G gives a brief biography of the fantasy's originator, Brian Moriarty.

But the documentation doesn't stop with the superb manual. Also included is a poster-sized postal map (also in color) of Festeron, showing the roads and identifying many of the buildings (but not the Magick Shoppe). A reference card summarizes much of the information presented in the manual. It also details a diagnostic procedure which will check if the story data are correct (complete and undamaged). (This allows you to determine whether a problem is hardware- or software-related.)

Still another piece of documentation is the sealed letter you are to deliver to the Magick Shoppe. You open this only when instructed by the fantasy to do so.

The packaging is excellent. In addition to the documentation, Infocom has included a warranty registration card (submitting this card gets you a complimentary subscription to the New Zork Times newsletter) and several pieces of advertising literature. One of these announces the availability of hints and maps for purchase.

Although I am past the age that is so fascinated with games, I really enjoyed doing this review. I was constantly challenged and frequently surprised as the fantasy evolved. The documentation left nothing to my imagination (except, of course, the fantasy itself). Response was quick, and often revealed the author's sense of humor.

(Infocom, available in Radio Shack stores nationwide, disk $34.95)

Keep in Touch with *Mailing List/Data Information*

A number of mailing list programs, capable of storing addresses and printing on self-sticking labels have been available over the years. *Mailing List/Data Information* by Crockett Software, offers several unique features that make it attractive. It can store and sort a large number of addresses, store additional data for each address, sort by number or letter, and can rapidly search using key words or numbers.

My review copy of this program arrived on cassette tape which is easily converted for disk operation. I would strongly recommend disk operation because of the ease of computer/disk interaction versus the difficulty of storing and updating data on tape. The program requires a slight change in a statement (AO$=DISK from TAPE) to convert to disk. The programmer did an excellent job in making the program so easily convertible.

Mailing List/Data Information contains two programs. The first, *PCEXT* must be run first if you have Extended BASIC to condition the computer. Then run *GEMLIST* which is the operating program. The program runs on 16K or 64K systems with or without Extended BASIC. The number of files available is limited by RAM size. Two hundred files are available for 64K.

The manual is well-written with good, easily followed instructions. It contains a useful appendix of states and commonly used abbreviations, a tapedisk routine for converting tape data files to disk and a merge program for combining two or more records.

On running the program, the user is given the option of creating records or loading recorded data. Input is in the form of a name, three address lines and three data lines. The name is entered with last name first, but a print option allows it to be printed first name first. Commas may not be used. One may use all or a part of the address lines. The data lines, which are not printed for labels, are useful for telephone numbers, occupation names or other descriptive information. This is particularly useful in the search routine where you can call out by address or data item.

The program locates records by I.D. number, name or any term used. It sorts files by file number, name or ZIP code. It also allows editing of all input for changes of address or any input data changes. Files may be reviewed at varying rates of scrolling.

Storing files is easily accomplished using the Record command. Retrieval is facilitated by an automatic DIR which displays stored filenames.

Printing can be for all addresses and data or addresses alone. When printing labels, the Address Only option is used. The program prints two self-stick labels across a page, or single labels. It also prints on one-inch or one-and-one-half-inch labels. One minor irritation was a printed statement following label printout of the number of labels printed, which wasted a label and upset the spacing for more labels. I eliminated that irritant by changing Line 66 in *GEMLIST*.

Need your plumber but can't remember his name? Locate the file with "Plumber" in the data. It would also be useful for Church or other organization mailing lists, small businesses (or larger ones), anywhere you want to file and maintain names, addresses, and pertinent data.

As far as program limitations are concerned, it will store up to 200 records for a 64K system. However you can maintain several 200 record files on a disk by simply using a different filename for each one.

I would recommend this program for maintaining your address and telephone files. It is the best that I have seen because of its speed and multifeatured capability, particularly the Locate and Sort capability.

Visit the CoCo Community Center THE RAINBOW'S CoCo SIG on DELPHI

J&R ELECTRONICS

Complete 256K and 512K Memory Expansion Systems
Hardware, Software and documentation included
User friendly software, programming not required

Easy, Solderless Installation

★ We have eliminated the necessity to piggyback for 512K versions! ★

RAMDISK — Fast disk I/O. 35, 40 track, two RAM drives with 512K,

PCOPYMOR — More than 30 PMODE 4 screens in memory at once. PCOPY command modified to accept PCOPY 1 to 128. More than 70 PMODE 4 screens and PCOPY 1 to 302 with 512K versions (or 30 PMODE 4 screens with one RAMDISK)

SPOOLER — HUGE printer buffer for offline storage inside your computer while the printer's busy. Customizable from 30K to over 200K (500K with 512K versions). Buffer can be turned off/on copied using simple PRINT CHRS commands

PAGER — Load multiple BASIC programs into memory at once! 8 (16 with 512K versions) pages of 32K with a PAGE command added to BASIC. Page PEEKs and POKEs access data in other Pages. 4 (8 with 512K versions) pages of 64K in 64K mode. Fully commented source code provided for this one!

Plus various utilities and demos. Detailed documentation, programs, system memory usage and a lot more included.

OS9 Ramdisk — Fast OS-9 disk I/O! 35, 40 track single sided or 40 track double sided (512K) Ramdisk under OS9. GOOD's OS9 Ramdisk, Rainbow Feb 86) with fully commented source code and install files added by J&R. Requires OS9 operating system

All software above is configurable for 256K/512K operation.
Software shipped on disk, add $10.00 for software on tape
(OS9 RAMDISK not available on tape)
All boards below are 256K, 512K capable, software & documentation included
New SAM (74LS785) not included (use your 74LS783, 74LS785 recommended for 2.0 MHz operation

Part number	Price	Description
#100	$39.95	Banker I bare board (with long pin socket, does not include memory Expansion Board)
#1002	$69.95	Banker II bare board + parts (does not include Memory Expansion Board)

A2D Deluxe Joystick: What More Could You Ask?

The A2D Joystick is slightly larger than the standard CoCo joysticks I'm used to. It's about the size and shape of other deluxe joysticks on the market, which is to say just about right. It appears to be well and sturdily constructed. The firebutton has more "throw" than the run-of-the-mill model, and has a very positive action.

Unobtrusively tucked away on the bottom of the case are two small dial-type switches that control the modes of operation. A flip of a switch allows self-centering operation or free-floating operation. The two axes are controlled independently, so the horizontal can be free-floating while the vertical is self-centering (or visa-versa).

The mechanical trim adjustment for each axis is accomplished by way of two slide switch mechanisms located on the top of the case. These slides are stiff enough to prevent accidental adjustment. To test the operation of these trims, I wrote a short BASIC program to display the integer (zero to 63) returned by JOYSTK(0) thru JOYSTK(3), as determined by the positions of the horizontal and vertical axes of both joysticks. In the free-floating mode, centering the trim control allows the full range of zero to 63. Maximum trim adjustment shifts these values by approximately 23 (zero to 40 or 23 to 63). In the self-centering mode, the trim allows adjustment of the "position" returned to by the centering mechanism. The centering mechanism seems to be very precise. Once adjusted to a certain number with the trim adjustment, the centering always returns to that number.

Using the same program mentioned above, I tested the A2D against the common garden variety RS joystick. With the RS it was difficult to move smoothly one number at a time. It was also difficult to stop on a chosen number - I got the feeling that a sneeze two doors down might change the display from 39 to 40. With the A2D, however, one step at a time was a breeze. In free-floating mode I could stop on 39 and set the joystick down on the desk without affecting the display. This level of precision must be an advantage for any application. *CoCo Max* came immediately to mind. While I was not able to test it with *CoCo Max*, I'm certain the additional control offered by the A2D would be very helpful with a system which allows joystick control of the entire 256 by 192 Hi-Res screen.

A2D: what more could you ask of a joystick?

(Cinsoft, 2235 Losantiville Ave., Cincinnati, OH 45237, $27.50)

— Stanley Townsend

See You at RAINBOWfest-Princeton October 17 - 19

Master Disk — A Simple Program to Catalog Files

Master Disk assists in cataloging all your disk files. It requires 32K and is based on a program by Paul Selig in the December 1983 issue of THE RAINBOW. *Master Disk* will create, sort and save a disk library of filenames. It can hold up to 18 directories or 250 program names in a single file. Multiple files can be created so you can catalog all your disk files.

After correcting four bugs, I found this program easy to use, and it does its job well. The bugs were minor and probably caused by the author trying to strip out spaces, etc. I have reported these to the author and I'm sure they will be cleaned up by the time you read this review.

Master Disk is menu driven and provides good on-screen prompts. There are two menus. The main menu allows you to create a new directory or recall an existing directory. The activity menu allows you to add to file, find a selected program, review entire file, or save to disk. *Master Disk* will record the disk filename and extension and the disk name (up to nine characters) for each file.

Reports can only be printed to the screen. When looking at the screen reports, 10 files are displayed at a time.

There is no hard copy documentation with this program. There are enough on-screen instructions to satisfy that need. There is no information supplied with the program to indicate what size CoCo is needed.

If you are looking for a simple program to catalog disk files, then this may be the one. But you may be disappointed if you're looking for something that is sophisticated and has lots of features.

Master Disk is a freeware program, so the most you're out is postage if you don't like it.

(Bob's Software, P.O. Box 391, Cleveland, OH 44127, send blank formatted disk and return postage)

— Michael Hunt

(For this winning one-liner contest entry, the author has been sent copies of both *The Rainbow Book of Simulations* and its companion *The Rainbow Simulations Tape*.)

in the present Color Computer) and challenged the audience to imagine the resolution this would provide.

Steve Bjork is now the OS-9 database section leader on RAINBOW's CoCo SIG on Delphi. Welcome aboard Steve and thanks for the inspiring words.

"Sequential ASCII text files from Disk BASIC load into IBM PC editors without a hitch, although you have to add line feeds after each carriage return when using some editors."

Amiga, Apple IIe, Atari ST-520, IBM PC, MacIntosh, Robotics and the VME bus were the buzz words at the OS-9 community buffet Sunday morning at RAINBOWfest Chicago. What do all these computers have to do with OS-9? They will all run it soon! That's the word from James W. Moore Jr., the Coordinator of Technical Services at Microware. Bill told about 35 OS-9 aficionados the 68K world has not had an across-the-board operating system and Microware's OSK is the ideal candidate. Why?

"OSK gives you the ability to move software across many different machines," Moore said. "This will be great for software developers."

After mentioning all the new OSK ports, Moore turned the audience's attention to CD-I, noting that the applications we'll use everyday in our homes in 1988 haven't even been dreamed up yet. "The possibilities are staggering," he said.

And, how does this affect the Color Computer OS-9 user? "They'll be way ahead in the game," Moore said. "CoCo OS-9 gives them a gateway to the 68000 software used heavily by industry today. Since the 6809 and 68000 bear such a strong family heritage, it is very easy to port most applications from the 6809 to the 68000. Besides, the 6809 is the best and probably the last 8-bit processor. It is still an important product, but more importantly, it is a mature product. It has a lot of life yet."

Moore predicted as all these new OS-9 ports and systems appear, the programmer with CoCo OS-9 experience will have an edge. Their knowledge is directly applicable. "There is a window of opportunity opening up," he said. "Go for it."

Bill Moore and User Group president Brian Lantz both called 1986 the year that OS-9, an underground classic for several years, hits the light of day. "We have seen a lot of interest from the press and the public in the past several months," Moore said. "Some are even naming OS-9 as a potential competitor to MS-DOS in the 68000 world."

With the world waking up to the wonders of OS-9, it's a shame that only 35 people were able to join Users Group members for the OS-9 Community Buffet. I hope to see you at the OS-9 Buffet during RAINBOWfest Princeton.

Getting the Words on Disk

Many people on the CoCo SIG and at RAINBOWfest Chicago have asked us to recommend a good word processor for use on OS-9. It's a personal choice and it depends on the hardware you are using. However, since problems seem to be popping up with many of the established word processors when they are used with some 80-column cards and Tandy's OS-9 Version 2.00.00, we'll offer a few thoughts.

If you are still using a standard issue CoCo without a hardware 80-column card, here's something you might want to think about. Why not use the *DeskMate* editor? Then, feed your file into the Shareware

At Last — **INTERCOMP SOUND** presents
PROFESSIONAL MIDI PRODUCTS FOR THE COLOR COMPUTER!!

At InterComp our objective is to support Midi hardware/software for the Color Computer to the fullest. Within the next year or so you can expect a variety of products such as librarian/patch programs (Korg, Yamaha, Casio etc. . .), graphics editor and system exclusive software. Don't go out and buy another computer for your MIDI system!!!!! Our products are designed with the professional in mind, be it for studio, performance, home recording or music education. Here is the start of more to come!

COLOR MIDI CONNECTION — This interface plugs into the cartridge slot. It contains 3 Midi outputs, 1 Midi input, and a female connector for the disk controller (no Y-cable is required) $98.00

SYNTRAX 1.00 — With this sequencer you will quickly control your Midi system! Major features include: 16 polyphonic tracks, interactive editor, 30,000 bytes for note storage, independent repeats for any track, all midi channel control data (program changes, channel #, velocity, pitch wheel, etc.), int/ext sync for Midi drum machines (or another sequencer), programmable tempo, transposition, clefs, key signatures, chords, complex rhythms, use up to 4 disk drives, sequence chaining and linking, notes/Midi-events can be specified with a resolution of 1/384 note! Requires 64K, disk drive, COLOR MIDI CONNECTION — $75.00

SYNTRAX 2.00 — All the features of SYNTRAX 1.00 plus: real/step time record (notes, velocity, program changes and controllers), input filtering, programmable split points, punch in/out anywhere, easy and quick editing of Midi data, supports J&R's **512K** upgrade for a tremendous amount of storage for recording! $125.00 (Customers that already have SYNTRAX 1.00 can upgrade to ver. 2.00 for $60)

SYNLIB 1.0 — Expandable Multi-Instrument Voicing Librarian. Buy what you need, when you need it. Includes pull down menus, SYNTRAX 2.0 compatibility and ease of expandability to set up the studio instantly. Synlib with one Librarian Module — $45. Roland TR707/727 Lib. Module — $20.00. Korg EX800 Lib. Module — $20. Yamaha, Casio Lib. Modules Avail. soon!

Include $3 for shipping (CODs add $2). Residents of N.Y. state add sales tax. Mail check or money order to:

because it lets you perform physical input/output operations directly to a disk. Normally, you would be reading or writing to a directory or a file. When you append the commercial "at" sign (@) to a device, you are telling OS-9 that you want to treat the entire disk mounted in the drive as one logical file. And, since Logical Sector Number 0 is the first logical sector on any disk, *patch* looks at it as soon as it is called. Now let's look at the two script files.

Script File Number 1

```
m 0001
05
A0
/
q
```

Script File Number 2

```
m 0001
08
00
40
01
00
/
i 01B4 01FF 00
q
```

The first script file simply positions *patch*'s edit pointer to the second byte in the file. The 05 then replaces the 08 and the A0 replaces the 00. The slash (/) tells *patch* you want to exit the edit mode. The 'q' lets you exit from *patch*.

The second script file is used after the RAM disk contains the information from your floppy disk. First, it changes the second and third bytes back to 08 00, or 2,048 sectors. Then, it changes the number of sectors per track, 12 Hex, in the floppy, back to 40 Hex or 64 in the RAM disk and restores the number of bytes in the RAM disk allocation map to 0100.

The two additional changes are needed because when you backup the floppy to the RAM disk, Logical Sector Number 0 from the floppy disk is copied into Logical Sector Number 0 of the RAM disk. If you didn't change it back, OS-9 would think the RAM disk was a 1,440 sector floppy disk.

The next to last line in the second script file restores the last part of the RAM disk's bit map to its original state. In *patch*, the 'i' means initialize. We are initializing, or clearing, each byte between 01B4 and 01FF to 00. Here's why.

The bit sector allocation map begins at 0100 on both the floppy disk and the RAM disk. The bit map from the 1,440 sector floppy disks ends at 01B3. We need to tell OS-9 that all the sectors beginning with sector number 01B4 are free and may be used by other files. We do this by clearing them. The same procedures work with any size floppy disk and any size RAM disk if you change the two script files to match the two disks you are working with.

OS-9 at RAINBOWfest Chicago

Congratulations to Steve Bjork of SRB Software in Simi Valley, California. Steve, who just last February received the "most improved attitude award" from the OS-9 Users Group when he finally started writing programs for OS-9, delivered the keynote address at the CoCo Community Breakfast, and much of his speech was about OS-9. He gave a sneak preview of the new "Model 13" from Tandy complete with slides of the two "Mickey Mouse" processors it reportedly contains. It looked like he shot them on location at Disneyland where he once worked.

Following his short audio-visual presentation, Bjork highlighted the progress the Color Computer has made, spotlighting the new 80-column cards, the Tandy Sound/Speech Cartridge and the Deluxe RS-232 Pak. Asked why he uses the RS-232 cartridge instead of the pseudo serial port on the back of the CoCo, Bjork replied that he doesn't do "bit banging."

He talked about selling computers to people who have never used one. "Some can't even use a hammer!" he said. "We need to make it easier for them to run a computer. I'm no different. When I want to write a letter, I want to write a letter, not write a program to write a letter."

After mentioning the new hardware, Bjork revealed the secret of why Tandy has moved all its software production over to OS-9. "When you add all these devices, you need an operating system. Without OS-9, all you have is Microsoft BASIC. Besides, Microsoft doesn't know how to write an operating system. Just look at MS-DOS," he said, generating a round of laughter from the crowd.

"After much research, Tandy picked up a then relatively obscure operating system named OS-9," Bjork said. "Today they only support three operating systems: MS-DOS, OS-9 and Xenix. They needed an operating system to carry their software in case they changed their machine."

Bjork also praised the OS-9 programming languages, noting that they are almost completely bug free. Few operating systems manufacturers can say that today. Non-experienced users will find it much easier to use the CoCo in the future. He said the OS-9 based *DeskMate* was a step in the right direction, giving beginners a lot of easy-to-use functions at a reasonable price.

He sparked the imagination of the audience when he talked about the new CD-I standard recently introduced by Sony and Phillips. CD-I, which features interactive audio, video and computer data, is driven by a special version of OS-9. To get people thinking, he talked about a "bird book," telling the audience they would be able to give their CD-I based portable computers the location, time of year and a description of the mystery bird they were looking at. The computer could then return the name of the bird. He thought it might be possible to feed the sound of the bird into the computer and match it with the pre-recorded sound of the bird stored on the compact disk.

Bjork called CD-I an appliance computer and said it would give birth to entertainment disks beyond our wildest imagination. As a technical aside, he mentioned that the VDG chip in the CD-I players uses 100K of memory for each picture (compared to 6K

OS-9™ SOFTWARE/HARDWARE

SDISK—Standard disk driver module allows the full use of 35, 40 or 80 track double sided disk drives with COCO OS-9 plus you can read/write/format the OS-9 formats used by other OS-9 systems. (Note: you can read 35 or 40 track disks on an 80 track drive). Now updated for OS-9 ver. 02.00.00 **$29.95**

SDISK + BOOTFIX—As above plus boot directly from a double sided diskette **$35.95**

L1 UTILITY PAK—Contains all programs from Filter Kits Nos. 1 & 2 plus Hacker's Kit #, plus several additional programs, Over 35 utilities including "wild card" file cmds, MacGen command language, disassembler, disk sector edit and others. Very useful, many of these you will find yourself using every time you run your system. These sold separately for over $85. **$49.95**

SKIO—Hi res screen driver for 24 x 51 display; does key click, boldface, italics, supports upgraded keyboards and mouse. With graphics screen dump and other useful programs. **Now UPDATED FOR OS-9 Ver 2.0 $29.95**

PC-XFER UTILITIES— Utilities to read/write and format ss MS-DOS™ diskettes on CoCo under OS-9. **$45.00 (requires SDISK)**

CCRD 512K Byte RAM DISK CARTRIDGE—Requires RS Multipak interface, two units may be used together for 1MB RAM disk. OS-9 driver and test software included. **$199.00**

All disk prices are for CoCo OS-9 format; for other formats, specify and add $2.00 each. Order prepaid or COD, VISA/MC accepted, add $1.50 S&H for software, $5.00 for CCRD; actual charges added for COD.

MS-DOS is a trademark of Microsoft, Inc.

experiments, you gain a practical tool and a knowledge of another facet of OS-9 at the same time.

This month, the desire to experiment was driven by the fact that I do not own 80-track double-sided drives but do own one of Tony DiStefano's brand new 512K Super RAM cards from CRC Inc. If I used the tricks I published in June with the 512K RAM Disk and double-sided 40-track drives, I would lose nearly 200K of fast RAM disk, not a viable alternative. I wanted to put every byte of the 512K RAM Disk to work.

Finally, one afternoon while plodding along the Mt. Vernon bicycle trail, I had a brainstorm. "Why not format the RAM disk to its full 512K capacity and then go in and change Logical Sector Number 0 to make the backup command think the RAM disk was the same size as the floppy disk. I could then do the backup quickly. After the backup command had finished its job, I could change Logical Sector Number 0 back to its original state and make OS-9 believe the RAM disk was full size. In real life, it wasn't quite that simple, but it worked.

We'll look first at Logical Sector Number 0. At the highest level, OS-9 communicates with many different types of hardware through a hierarchy of file managers, device drivers and device descriptors. An OS-9 module named IOMan, short for Input/Output Manager, manages the flow of information. To do this job, it relies on several subroutine packages designed to communicate with different types or classes of hardware

The most used of these subroutine packages are SCF, short for Sequential Character Files, and RBF, for Random Block Files. SCF contains a set of routines designed to work with any hardware that sends or receives data sequentially. For example, a terminal sends one character at a time from its keyboard. Likewise, the printer receives one character at a time. SCF manages the flow of these characters to the modem, printer, terminal or any other serial device you have attached to the Color Computer.

However, floppy disks, hard disks and RAM disks behave differently — they send, receive and store information one block at a time. If you were to describe them academically, you would probably call them random-access or block-oriented mass storage devices.

The RBF module is intelligent enough to maintain the logical structure of every file stored on all random access devices. It sends and receives 256 bytes at a time to your hardware by using the proper device driver. However, RBF never needs to deal with the physical details of the read or write operation. The device driver keeps track of things like the physical track and sector address of all data on each disk. RBF only needs to worry about the logical sector number.

The first logical sector on a disk is Logical Sector Number 0. The number of the last logical sector is one less than the total number of sectors available on the disk. The device driver, CCDisk in Color Computer OS-9, translates each logical sector number passed by RBF to the physical track and sector address.

RBF is generic and knows how to communicate with many different storage devices. But before it communicates, RBF must know what type of device it is talking to. To find out, it reads the information stored in Logical Sector Number 0 of the disk mounted in the device. During this read, the driver picks up a lot of information about the physical layout of the disk. Two of the most important details are the number of tracks on the disk and the number of sectors in each track.

This first logical sector is also known as the identification sector. The next logical sector contains the first part of a bit map, or allocation map, that may fill as many as 256 sectors on a large hard disk drive. This bit map tells OS-9 which sectors have already been used to store data and which may be used by additional files. The bit map in the 512K RAM disk we are going to modify just fills Logical Sector Number 1.

Following the bit map, you will find the root directory of the disk. When we modify Logical Sector Number 0 of our RAM disk to make it look like a floppy disk, we are changing the first four bytes in the sector. Later, after we have backed up the floppy disk to the RAM disk, we need to change the first six bytes back to their original state and rewrite part of the bit map. But first let's look at the information stored in Logical Sector Number 0.

During our experiment, we are going to change the value of the total number of sectors on the RAM disk to equal the total number of sectors on our floppy disk. If we look at Logical Sector Number 0 immediately after we format the RAM disk, we find the first three bytes are 00 08 00 Hex or 2,048 decimal sectors. That makes sense since 2,048 * 256 equals 524,288 or 512K. On the other hand, our double-sided, 40-track floppy disk contains 1,440 decimal sectors. If you translate 1,440 to Hex you get 05 A0. So to pull our first trick we must change the 00 08 00 to 00 05 A0. Since the first byte of each value is zero, we need only change the second and third bytes of each three-byte value.

While we are examining Logical Sector Number 0 of our RAM disk, we need to note two other values. We need to know the number of sectors per track and the number of bytes in the allocation map. When we look at the chart, we see that this information is stored at an offset of three and four bytes, respectively, from the beginning of the sector. During our examination, we'll notice that our 512K RAM Disk was formatted with 40 Hex or 64 sectors per track. We'll also see that our RAM disk has 01 00 Hex or 256 bytes in its allocation map. Jot this information down; we'll need it later.

We used the *patch* utility from Computerware's OS-9 Disk Fix and Utilities package to make the changes. Further, we put our input to *patch* in two script files and wrote a short procedure file to do the entire job for us. First, here is the procedure file.

```
load echo
echo Formatting Ram Disk Now
format /rØ >/nil
yDisto Ram Disk
echo Patching Ram Disk Now
patch /RØ@ <scriptl >/nil
echo Backing Up Disk Now
backup #9Ø /DØ /RØ >>/nil
yy
echo Restoring Ram Disk Size Now
patch /RØ@ <script2 >/Nil
echo Enjoy Your New Super Ram
echo from Tony Distefano and CRC
unlink echo
```

Information Stored	Offset	Name in OS9Defs File
Number of sectors on disk	00	DD.TOT
Number of sectors on each track	03	DD.TKS
Number of bytes in allocation map	04	DD.MAP
Number of sectors in each cluster	06	DD.BIT
Root directory	08	DD.DIR
Owner's User Number	0B	DD.OWN
Attributes of Disk	0D	DD.ATT
Internal disk ID number	0E	DD.DSK
Number of sides and density	10	DD FMT
Number of sectors per track	11	DD.SPT
Reserved space	14	DD.RES
First sector in boot file	15	DD.BT
Size of boot file	18	DD.BSZ
Time/date disk created	1A	DD.DAT
Name of Volume	1F	DD.NAM
Path Descriptor Stuff	3F	DD.OPT

There are a couple of things you should notice in the procedure file above. First, we are patching something called "/R0@." And second, the device descriptor nil. The latter allows you to throw away the output of a program. It comes with Version 2.00.00 of OS-9 from Tandy.

The pathlist above, /R0@, is special

KISSable OS-9

Experimenting with RAM Disks

By Dale L. Puckett
Rainbow Contributing Editor

Progress has been plodding along at a snail's pace here at KISSable OS-9 headquarters. Our original $499, 4K, 1979 "Model D" CoCo finally bit the dust and we were forced to lay out $69 to replace it with a 16K CoCo 2. The 16K status didn't last long, however; about an hour after we picked it up, MOTD Editor Bruce Warner and I had installed 64K memory chips. I needed to get online fast because I was falling behind in the testing of all the new equipment/software now available to CoCo OS-9 aficionados.

One of the most exciting opportunities came from Fran McGee at Tandy who loaned us a 15-megabyte hard disk to use for a month or two. Next month, we hope to present an action-packed chronology of our adventures. This month, we follow up on the RAM disk experiments we presented in the June issue. We'll show you another trick that lets you do backups from a floppy and still use all the available space on the RAM disk.

Dale L. Puckett, who is author of The Official BASIC09 Tour Guide *and co-author, with Peter Dibble, of* The Official Rainbow Guide to OS-9, *is a free-lance writer and programmer. He serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. Dale works as a U.S. Coast Guard chief warrant officer and lives in Alexandria, Virginia.*

We'll be telling you about some of the information stored in Logical Sector Number 0 on all OS-9 disks. We'll also look at a CoCo/IBM data transfer utility package and feature a UNIX-like stat routine written in assembler for OS-9, a BASIC09 pretty printing program and a C program that adds a header to the standard *line.c* utility.

First however, we must pass along an addendum and a correction. Tom Roginski of Owl-Ware, P.O. Box 116-D, Mertztown, PA 19539, 800-245-6228, contacted us about the *Winchester* BASIC we described in the June issue. Al Reinhart, the program's author, sent us the information earlier this year. He called the program WBASIC. The proper name for the program is *Winchester* BASIC and you can buy it from Owl-Ware. The price is $50 when you buy an Owl-Ware hard disk drive — $75 when you buy it alone. We try to include the name and address of the vendor when we describe a program, but this one slipped through the cracks.

Turning to corrections, in May we gave you a really slick shortcut to use when you need to OS9Gen a new disk. Unfortunately, my fingers weren't listening to my mind and I typed the wrong command line. The command line should have read, `ls ! os9gen /d1` <ENTER>. To use this tip, create a new directory. Then, copy or save the modules you want in the new OS-9 boot file into this new directory. Finally, use the CHD utility command to make the new directory, the current data directory and type the command line above. Of course, you must have a freshly formatted disk loaded in Drive /D1 when you execute this command.

After developing and testing the procedures needed for this month's RAM disk experiments, I was surprised to receive a message from Dennis Skala on RAINBOW's Delphi CoCo SIG. He had taken a similar approach with his RAM disk.

"I read your June column with interest, especially the handstands you were doing while trying to get a floppy disk quickly copied to a RAM disk without losing a large chunk of the RAM disk's capacity. I went through a similar process when I first started using my RAM disk," Dennis said.

"I didn't think of formatting the floppies in a non-standard way. Rather, I rewrote the backup utility and removed the requirement that the drives have the same number of sectors. This means I can copy any type of disk to the RAM disk — single- or double-sided, 40- or 80-track. I wrote the new backup command so that the balance of the RAM disk in excess of the floppy's capacity remains free," Skala said. "I also picked up a bonus — I can now quickly backup a standard Radio Shack 35-track disk to one of my 40-track drives." You'll be happy to know that Skala has uploaded his new backup command to the OS-9 database section of RAINBOW's CoCo SIG on Delphi and it is available there for you to download

One of the main reasons we publish these little experiments is to provide a practical project to share some of the details that make a complex operating system like OS-9 powerful. When you duplicate one of these

SHACK UP WITH A LIBRARIAN

And even then you couldn't access as many CoCo goodies as you get in Public Domain Software Copying Company's special pre-selected package deals. Check it out.

1 TOOLS—4 disks, 62 files. Includes: Basic 64, BSearch, DiskTest, DOS64, DSBoot, Print DIR, Recover, Romback, Romcat, Scm51, Backup, Unlock, MultBack, Spell & Fix Free Ware, Manual, Dict, Build, List, Append, Addword, Teleterm, Kermit, Superforth 16K Forth, Editor 32K Forth, Manual **$25**

2 GAMES—4 disks, 59 files. GAMES IN BAS C include: Gunner, Life, Poker, Biorythm, Hangman, Go, Fractal, World 3D, Lovetrek, Nude Startrek, Reverse, Scramble, Pizza. FAST MACHINE LANGUAGE: Pong, Squash, Blockade, Germ Grid, 3D-Tictac, Zerog. SIMULATIONS & ADVENTURE: Cave, Wargame, NORAD, arcoyle, KingTUT, Civilwar, cewar **$25**

3 MJS CA MANUAL & UTILITIES—4 disks, 80 files. Includes: Addplay, Boogie, Circus, Clowns, Hyden, JBGood, Sonata3, Straw, #3 Foggy, Funeral, Hardday, Joplin, Peanuts, Rock, Stranger, Camelot, Diamond, Fantasy11, Greengrass, Star Wars, Superman, RootBeer, Chos Bust, Mash, 201, Stelmo, Balstar, Messiah, Raiders, Watermus, Toccata, Fuge etc **$25**

4 GRAPHICON PICTURES—these pictures demonstrate the ability of the Color Computer to produce exciting art. Graphicon needed. Modifyable. 4 disks **$25**

5 PICTURE DISKS—2 disks, 35 files. Turn your CoCo into a Mac. Includes: McPaint Icons, Epson DRV, Animate, Balloon, Hebrew, Typing, RSDMP DRV, Animation Disk includes: Rotate, Shuttle, Triangle, Glass, Star, Baseball, Donduck **$15**

6 FOR THE OS9 OPERATING SYSTEM—2 disks, 20+ files. Includes programs from BASIC09, ASM and C: Finance, Clock, MathDemo, Bounce, GrafDemo, Primes, WC, Six text adventures for OS9 operating system **$15**

7 ALL THE ABOVE—$130 value **$80**

ORDERS: Include full name, complete address, phone with area code (important!). Specify for CoCo. Include $3 P+H per order. Phone, credit cards only. Overseas add 80c per disk. U.S. postage. N.Y. include 8.25% tax, prepaid only. Canada postal money orders, U.S. $ only. We also have PD Software for Ms Dos, CP/M. Catalogs $4. We sell 2 Drive Ms Dos portable 512k $895. We are a copying service providing programs from Users Groups, corrections solicited. Please include $2.40 handling with any returned (postal mangled etc.) disk. Content not warranteed.

The Public Domain Software Copying Company
(est. 1983)
33 Gold Street, New York City 10038
212-732-2565

changes, subscripting and superscripting. For example, you could call for extended letters to type a title or heading and return to normal type for the body of text.

Print formatting commands change format settings in *PenPal* itself like margins, page lengths, line spacing, centering of text, right justification, page numbering options, form feed (new page) and wait after each page is printed. The only thing missing is page headers. These formatting commands permit changes to be made in the middle of the text. For example, you could change the left margin to indent a quotation or a list. When the quotation is entered, a formatting command is included to reestablish the original margin for the following text. If you don't like the default settings for the basic document, lead off with print formatting commands at the beginning of the document. Justification and page numbering choices would certainly be made there.

Write has a few limits. You cannot print out a book manuscript by queuing files as with *Telewriter* and *DynaForm*. It does not do mail merge. It lacks headers, footers and footnoting capability. But, most users will never miss these.

A final consideration is the way *PenPal* saves the text buffer. Like *DeskMate* and a bunch of non-CoCo programs, paragraphs are written into the buffer without delineation of lines within the paragraph. A carriage return character ends the paragraph.

The file on disk is in ASCII format, but apparently lacks the end-of-file designation BASIC expects. To read a file into a BASIC program, two things must be done. First, carriage returns must be inserted into long paragraphs to break them into segments short enough to fit into a BASIC string variable. This must be done by editing the file in *PenPal* and inserting carriage returns at the end of every second or third line on the screen. *PenPal* shows you where there are carriage returns in the document. Next, the file must be run through a BASIC program to save the text to a new disk file that handles the end-of-file properly. The following is an example of a program to do this.

The program simply opens an input and an output file as defined by the user. The directory for each drive used is displayed as a convenience. Strings are read in with `LINEINPUT#1,A$` and printed both to the screen, so one sees some action, and to the second file. One would expect EOF(1) in Line 20 to detect the end of file and close both files. Since a proper end of file is lacking, the program ends with an IE Error which causes BASIC to close the files anyway. The output file will be a proper ASCII file that will load into a BASIC program or into *Telewriter*.

```
4 CLEAR10000
5 CLS:PRINT:INPUT"DRIVE # INPUT
FILE";ID$:PRINT:ID=VAL(ID$):DIRI
D:PRINT:INPUT"INPUT FILE NAME";F
I$:IP$=FI$+":"+ID$
10 OPEN"I",#1,IP$
12 PRINT:INPUT"DRIVE # OUTPUT
FILE ";OD$:PRINT:OD=VAL(OD$):DIR
OD:PRINT:INPUT"OUTPUT FILE
NAME";FO$:OP$=FO$+":"+OD$
15 OPEN"O",#2,OP$
20 IFEOF(1)THEN CLOSE:END ELSE L
INEINPUT#1,A$
30 PRINTA$:PRINT#2,A$
40 GOTO20
```

Though I am typing this in *PenPal*'s Write, I will transport it to *Telewriter* for printing because I want headers on each page.

From this examination of the Write module, you can get the flavor of the rest of *PenPal*. The Calc, Database and Telecom modules each combine much more than minimum functionality coupled with some unique features. Each are easy to learn and use. Some operations like the screen update in the Write module and the recalculation in Calc are unusually fast while none seem especially slow. All are function key driven with a function key strip displayed or, in Graphit, displayable.

My overall impression was good at RAINBOWfest, and a full day with the package has reinforced that. The only problem that might be significant is in the file saving operation on a JDOS-formatted, 40-track disk. It seems to be wasting disk granules. Fewer granules are reported to be available than should be for the number reported used. For example, if I add up the granules used by the files on a 40-track disk, I find 19 of 78 granules used, but only 45 free. Fourteen granules have been lost somewhere. This problem appears to be associated with a 40-track disk formatted with JDOS since disk space all adds up on a 35-track disk formatted by Disk BASIC.

Next month I will discuss the other modules.

PenPal is available from Four Star Software, Box 730, Streetsville P. O., Mississauga, Ontario, Canada, L5M 2C2. Price is $89.95 U.S. Canadian price is $119.95. The program is also available from some U.S. dealers so check RAINBOW advertisements.

name); F3, Free; F4, Kill; and F5, Dir, are identical to Disk BASIC functions. The real fun begins with F6, Step, which changes the stepping rate of the disk drives and F8, Trks, which allows selection of 35- or 40-track drives. You need another DOS like ADOS, CDOS or JDOS to format disks to 40-tracks.

I ran into problems when I tried to set up a 40-track disk. I used JDOS to format a disk with 40 tracks and backup the *PenPal* program disk to it. I ended up with a 35-track disk probably because the file allocation table copied is for 35 tracks. Next I formatted another disk for 40 tracks and used JDOS to copy a number of files across. Part of each file was lost. Next I formatted a 40-track disk and placed it in Drive 1. I booted *PenPal* and checked available sectors on Drive 1. Free reported 73 granules rather than 78. I was able to load files into *PenPal* from the 35-track data disk and save them onto the "40-track" disk, but never recovered the five lost granules. More on JDOS 40-track format problems later.

Finally, from the Main Menu, F7 saves all current settings to a Config file. This way, when you boot *PenPal*, Drive 1 can automatically be the default drive. All current printer defaults are set as well.

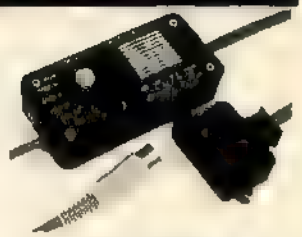
As I mentioned before, the files pertaining to a particular application are listed under its name on the main menu. The extensions clue *PenPal* on what belongs where. For example, all files saved from Write and saved as ASCII files from other applications carry a WP extension. Move the cursor over a blank entry under the application to start a new file or over an existing file name to start editing. If a new file is chosen, you are asked for a filename.

Write is the word processor. One of the first things I noticed was the 32,510 byte text buffer. This holds a lot of text. Any article in this RAINBOW would fit. This compares with about a 12K buffer in *DeskMate*.

PenPal is much like *DeskMate* in cursor movement and editing methods. It supports block commands to delete, copy and move text. It also supports buried printer control commands with the ability to tailor these commands to your printer and save these codes to the Config file using F7 from the main menu. Nine commands are available, each with a toggle on and a toggle off form. While six come predefined for RS-DMP printers, you can change these for your printer. These are needed to provide for underlining, font

Metric Industries

Model 101 Interface $39.95



The Model 101 is a serial to parallel interface intended for use with a COCO and any Centronics compatible parallel input printer. The 101 has 6 switch selectable baud rates (300-9600). The 101 is only 4" × 2" × 1" and comes with all cables and connectors for your computer and printer.

The Model 104 Deluxe Interface $51.95

The Model 104 is a serial to parallel interface like the Model 101 but it has the added feature of a serial port (sometimes referred to as a modem switch). This feature allows the connection of a parallel printer and any serial device (modem, serial printer etc.) to your computer. You may then select either output serial or parallel, with the flip of a switch. The 104 is only 4.5" × 2.5" × 1.25" and comes with all cables and connectors for your computer. You supply the serial cable for your modem or other serial device.

Model 103 Combo $68.95

With the turn of a knob the model 103 switches your computer's RS232C serial port to any one of 3 outputs — 2 serial and 1 parallel. The serial ports may be used for modems, serial printers or even another computer. The parallel port can be used with any Centronics compatible printer. The 103 has the best features from the 101 and 102: color coded position indicator lights, 6 switch selectable baud rates, heavy anodized aluminum cabinet, and many more.

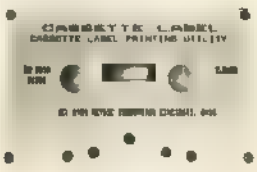
Model 102 Switcher $35.95

The Model 102 has 3 switch positions that allow you to switch your computer's serial output between 3 different devices (modem, printers or another computer). The 102 has color coded lights that indicate the switch position. These lights also act as power indicators to let you know your computer is on. Supplied with the 102 are color coded labels that can be applied to your accessories. The 102 has a heavy guage anodized aluminum cabinet with non-slip rubber feet.

Cassette Label Program $6.95

New Version 1.2-Tape transferrable to disk. Now save and load Labels from tape or disk.

This fancy printing utility prints 5 lines of information on pinfeed cassette labels. "Cassette Label" is menu driven and is very easy to use. It uses the special features of your printer for standard, expanded or condensed characters. Each line of text is automatically centered. Before the label is printed, it is shown on your CRT — enabling you to make changes if you like — then print 1, 2 or 100 labels. The program comes on tape and it is supplied with 24 labels to get you started. 16K ECB required.



Other Quality Items

High Quality 5 Screw Shell C-10 Cassette Tapes **$7.50 per dozen**

Hard Plastic Storage Boxes for Cassette Tapes **$2.50 per dozen**

Pin Feed Cassette Labels
White **$3.00 per 100**
Colors **$3.60 per 100** (Red, Blue, Yellow or Tan)

VISA MasterCard

THE 101, 103 AND 104 ALL REQUIRE POWER IN ORDER TO OPERATE. MOST PRINTERS CAN SUPPLY POWER TO YOUR INTERFACE. STAR, RADIO SHACK AND OKIDATA ARE JUST A FEW THAT DO. EPSON DOES NOT. THE INTERFACES CAN ALSO BE POWERED BY AN AC ADAPTER (RADIO SHACK MODEL 273-1431 PLUGS INTO ALL MODELS). IF YOU REQUIRE A POWER SUPPLY, ADD A "P" TO THE MODEL NUMBER AND $5.00 TO THE PRICE. (MODEL 101P $44.95, MODEL 104P $56.95 AND MODEL 103P $73.95)

The Model 101, 102, 103 and 104 will work with any COCO, any level basic and any memory size. These products are covered by a **1 year warranty.**

The Model 101, 103 and 104 work with any standard parallel input printer including Gemini, Epson, Radio Shack, Okidata, C. Itoh and many others. They support BASIC print commands, word processors and graphic commands.

We manufacture these products. Dealer inquiries are invited.

To order call our 24 hour order line 513-677-0796 and use your VISA, MASTERCARD request C.O.D. or send check or money order to:

Metric Industries
P.O. Box 42396
Cincinnati, OH 45242

Free shipping on orders over $50.00. Ohio residents add 5.5% sales tax.
Orders under $50.00 please add $2.50 for shipping.

Getting in Touch with *Pen Pal*

By Richard A. White
Rainbow Contributing Editor

Many people I spoke with at the Chicago RAINBOWfest are very satisfied with *DeskMate*, considering it is a beginner's level program. But, the folks at Four Star Software aren't satisfied since they are selling *PenPal* to do the same things. James Norrie of Four Star gave me a demonstration and ended up selling a copy to me. The last thing I need is another program to do word processing, spreadsheets, databases, graphing and telecommunications. However, *PenPal* looked so good, I felt I had to give it a real workout and let you know what I found. *PenPal* requires a 64K CoCo with one disk drive. Two drives are better.

There needs to be two sets of standards when judging software of this type. One is the power and usefulness of the individual modules and the other is the value of the total package to the average user who doesn't want or need most of the bells and whistles in the more powerful, single-application packages. Let's look at each application in *PenPal*, then make a judgment on the whole and look at the pieces more critically.

All applications use a common 51-character by 24-line screen in the high resolution graphics mode. Screen update is the fastest I have seen on the CoCo. One problem I have with *Telewriter* is that characters are lost when the wordwrap scrolls the screen and starts a new line. This has not happened on *PenPal*. The whole screen seems to move up one line as a unit and the word being wordwrapped goes to the left margin.

The top line of the screen displays a command line in reverse video. This is where things like the module name and current filename are displayed. The bottom two lines display a function key strip, again in reverse video. Up to 10 functions are displayed which are called by pressing the CLEAR key and a number together. Some applications have more than 10 functions in which case the F0 (CLEAR-'0') toggles the display of the alternate function key strip. Only those functions currently displayed by the function key strip can be called, but the alternate strip is easily toggled into view.

The five alternate functions are called by pressing SHIFT, CLEAR and the number key together. AF1 invokes a simple calculator that uses the command line at the top of the screen and does not interfere with the display for the application you are in. AF2 allows the user to change the printer defaults such as margins, page lengths, Baud rate and the like. The defaults are displayed one at a time in the command line at the top of the screen and pressing ENTER leaves the setting unchanged and moves to the next. This is much faster than loading graphics configuration screens and saving them as *DeskMate* does. You have the option of saving the new defaults from the main menu. In addition, the defaults are maintained as you move from application to application during a session.

AF3 toggles the screen background color between green and buff. AF4 calls the help file appropriate for the application and AF5 produces a directory of the default drive. AF12 exits an application without saving the file. What is key 12? It's the minus sign. CLEAR and the minus key (F12) will exit any function, application, or the program from the main menu.

When you LOADM *PenPal* and type EXEC, you see the main menu. It presents a five-part table headed by the application name with the names of the files listed below. The function key strip displays disk file functions. F1, Swap, changes the default drive. F2, Name(Re-

Richard White lives in Fairfield, Ohio, and has a long background with microcomputers and specializes in BASIC programming. With Don Dollberg, he is the co-author of the TIMS *database management program.*

The effective address is therefore $3E0C, the location of ARG1.

The other program counter relative instructions compute the address in the same fashion. Since PCR-type instructions don't contain an absolute address, they can be placed anywhere in memory and execute properly, even if they refer to locations inside the relocated program. The expense of using the PCR instructions is memory (PCR instructions are longer), more complexity and giving up a few other addressing modes (you can't use auto-increment addressing together with PCR, for example).

A Character Generator for Graphics Mode

To tie all of these concepts together, we've written a *Character Generator* program, shown in Listing 2. The program allows you to write any normal text character on the screen in graphics mode in upper- and lowercase. It also allows you to change the size of the characters. The program assumes you are in PMODE 4 (256 by 192, two-color mode), you are using graphics page one and you have a disk system.

The input parameters to the system take the form of a BASIC string. The first character of this string is the 'X' position representing the upper left-hand corner of the first character. The second character of the string is the corresponding 'Y' position. The third character is the size of the characters to be written on the screen, from one to 16. The remainder of the string is the text to be written. As an example, suppose that you wanted to write "This is a test" in the center of the screen. The height of text for a text screen is 12 pixels high and the width is eight pixels. However, character positions for this program are eight pixels high by eight pixels wide to allow packing 24 lines on the screen. The center of the screen is at X=128, Y=96 The input string looks like this:

```
ZZ$=CHR$(128)+CHR$(96)+CHR$(1)+"THIS IS A TEST"
```

The screen output looks like Figure 4.

Figure 4:
Sample Character Generator Output

To change the size of the text, use another value in the third byte. This byte represents the magnification factor. To display characters 24 pixels high you'd have:

```
ZZ$=CHR$(124)+CHR$(90)+CHR$(3)+"This is larger text"
```

The ZZ$ string variable string was used only as an example. Any string variable can be used, as long as it has the 'X' and 'Y' positions and magnification factor in the first three bytes. The sequence for calling the *Character Generator* uses the VARPTR function:

```
1000 ZZ$=...
1010 B=VARPTR(ZZ$)
1020 A=USR(B)
```

Of course, the program must have been relocated to protected memory and a DEFUSR done to define the start — all of the steps we described earlier. The program is relocatable, by the way, so that it can be used anywhere in memory you want to put it. Program counter relative addressing is used throughout the code.

Listing 3 shows a typical use of the *Character Generator* in writing sample text. The program must be on the disk in binary form (the output of an assembler). The program is relocatable and may be moved anywhere in RAM, but allow 318 bytes for the program. Change DEFUSR0 accordingly. The resulting display for this test driver is shown in Figure 5.

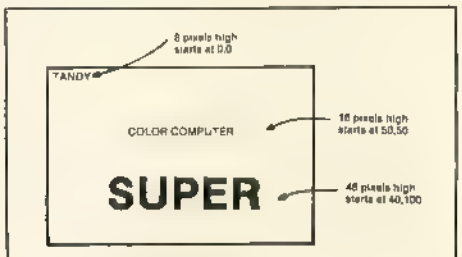

Figure 5: Test Driver Display

The program uses a 1,024-byte character pattern area called CHTAB, or Character Table. The address of this table must be POKEd into locations $13C and $13D as shown in Listing 3. The Character Table can be directly after the *Character Generator* program, or may be anywhere else in memory. The first eight bytes in this table represent the pattern for an ASCII character of zero, the next eight bytes the pattern for an ASCII character of one, the 65th set of eight bytes represent the pattern for 'A', and so forth. You can fill in your own characters for ASCII codes not normally used in the Color Computer, such as codes zero through 31. Each set of eight bytes represents the eight rows that make up a character, as shown in Figure 6.

The BASIC test program shows the patterns for the uppercase alphabetic characters A through Z and for a space character. Fill in the remaining characters as the need arises. All 128 positions in the table can be used, and any symbols meaningful to you can be used. Don't forget that the "scale factor" allows an expansion of each pattern,

The Universal MacInker(s)™ are here

Re-ink any Fabric ribbon automatically for less than

5¢

Now one **Universal Cartridge MacInker (UC)** re-inks all fabric cartridges and one **Universal Spool MacInker (US)** re-inks all spools. We have **MacInker(s)** dedicated to specialized cartridges, zip pack harmonica etc. Over 1000 printer brands supported. Use your **MacInker** to re-ink your dry, fabric cartridges (for less than 5 cents in ink) and watch the improvement in print-out quality. Our new, residue-less, lubricated dot matrix ink yields a darker print than most new ribbons. Or get any of our basic ink colors: brown, blue, red, green, yellow, purple and use **MacInker** to **create and/or Re-ink your own colored cartridges.** We have uninked or colored cartridges for the popular printers and ribbon re-loads for any printer. Operation is extremely simple & automatic with new twin drive electric motor that supports CW and CCW rotating cartridges. A good quality fabric ribbon of average length can be re-inked almost indefinitely. In our tests one re-inked Epson* 80 ribbon has outlived the estimated life of the print-head! We receive consistent & similar feedback from our customers. As of August 86 we have over 40 000 MAC INKER(s) in the field, in 5 continents (220 V motors available). **MacInker (UC) is $60.00.** Cartridge drivers are **$8.50/ea.** We still have our first generation, dedicated **MacInker(s)** for most popular printers. Prices start at **$54.95** with most units below $60.00. **MacInker** has been reviewed, approved and flattered in most magazines and even in the NEW YORK TIMES and the CHICAGO SUN TIMES.

Assembly language:

```
START   JSR  $B3ED
        TFR  D,X        point to block
        LDA   ,X        get 45
        LDB  1,X        get 233  etc
```

Is this really better than just assigning a block of protected memory for the parameter block? Probably not, but it is an alternative method

VARPTR is handy, though, when working with strings. If VARPTR is used to find the location of a string, it returns not the address of the string, but the address of a five-byte string parameter block as shown in Figure 3. The third and fourth bytes of this parameter block (+2 and +3) point to the location of the string itself. If this string address is used in the assembly language subroutine, it must again be converted to an integer value in D by a JSR $B3ED as shown here:

BASIC:

```
10Ø A$="COLOR COMPUTER"
11Ø B=VARPTR(A$)
12Ø DEFUSRØ=&H3EØØ
13Ø A=USRØ(B)
```

Assembly language:

```
START   JSR   $B3ED        convert to integer address
        TFR   D,X           X now points to string
```

Suppose we had a program that referenced a parameter block at the beginning of the program area, something like this:

```
3EØØ    ØØ      ØØ1ØØ   XPOS    FCB   Ø       for x position
3EØ1    ØØ      ØØ11Ø   YPOS    FCB   Ø       for y position
3EØ2 B6 3EØØ    ØØ12Ø   START   LDA   XPOS    get X position
3EØ5 F6 3EØ1    ØØ13Ø           LDB   YPOS    get Y position
```

You can see that the LDA and LDB assembled as "extended" addressing types of instructions. Each instruction consists of a one-byte operation code ($B6 and $F6) followed by a two-byte address ($3E00 and $3E01). What would happen if this code were incorporated into DATA statements and then moved to the $4000 area? The result would look like this:

```
4ØØØ    ØØ      ØØ1ØØ   XPOS    FCB   Ø       for x position
4ØØ1    ØØ      ØØ11Ø   YPOS    FCB   Ø       for y position
4ØØ2 B6 3EØØ    ØØ12Ø   START   LDA   $3EØØ    get X position
4ØØ5 F6 3EØ1    ØØ13Ø           LDB   $3EØ1    get Y position
```

Although the locations in which the instructions were stored changed, the references were still to $3E00 and $3E01. Obviously, when this program was executed, A was loaded with the contents of location $3E00 and B with the contents of location $3E01 instead of the new locations at the beginning of the program, $4000 and $4001.

This problem occurs for all references to data locations inside the program, but not to external fixed areas. If there were a parameter block at memory area $5000, for example, an LDA $5000 would be valid

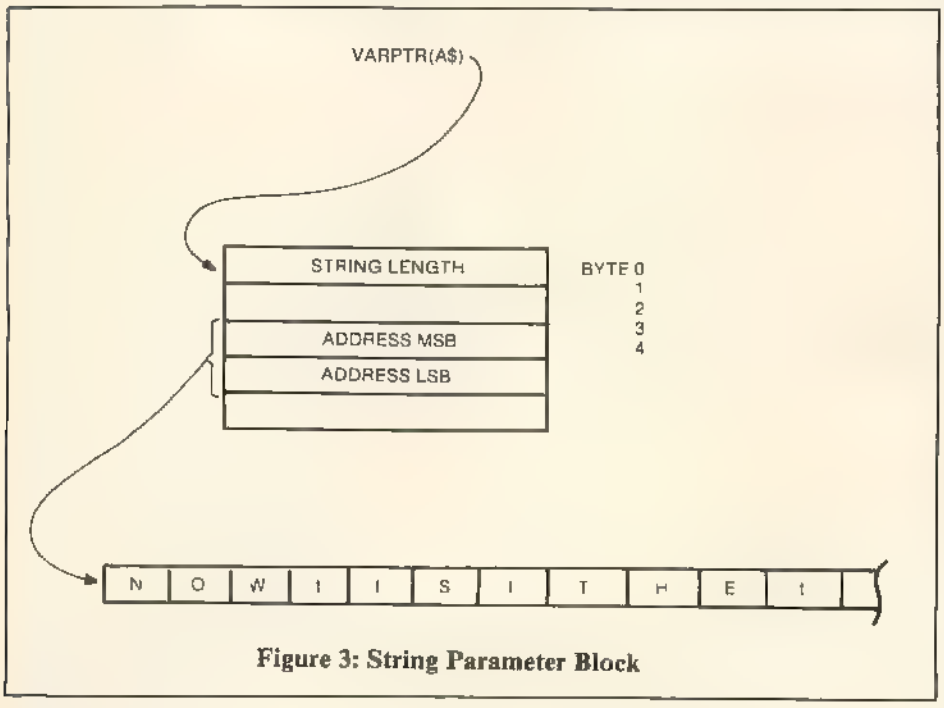

Figure 3: String Parameter Block

Relocatability

In our examples and in last month's column, we assumed for the most part the machine language code generated and stored in DATA statements started at a fixed location — &H3E00 in our examples. A typical assembly language program can't be stored and executed just anywhere in memory. Let's see why.

wherever the program was moved. The same thing applies to system memory areas like the text or graphics screens — they are at fixed locations.

The problem also applies to JMP and JSR instructions, which jump to locations specified by absolute addresses within the instruction, generated at assembly time. Branches, however, use relative addressing in which the effective address for the branc is computed by adding the contents of th program counter to a displacement valu within the instruction. Look at this pr gram·

```
3EØØ                ØØ1ØØ          ORG    $3EØØ
3EØØ 7E 3EØ5        ØØ11Ø FIRST    JMP    NEXT
3EØ3    ØØ          ØØ12Ø          FCB    Ø
3EØ4    ØØ          ØØ13Ø          FCB    Ø
3EØ5 2Ø F9          ØØ14Ø NEXT     BRA    FIRST
       ØØØØ         ØØ15Ø          END
```

This program doesn't do anything; it's a infinite loop. It does illustrate jumping an branching, however. The JMP NEXT ir struction assembles with a jump locatio (after the 7E op code) of 3E05. The BR/ FIRST, though, does not use an absolut address. Instead, it uses a displacemen value of F9. When this displacement valu is added to the contents of the progran counter, the result is the branch address. Th program counter always points to the nex instruction after the current one bein executed, in this case, at $3E07. Addin $3E07 and $F9:

```
  $3E07
+ $FFF9
  ----
  $3E00
```

The displacement value is "sign extended" to the left, which must be done for negative displacements of $FF through $80 (indicating branches backwards). Positive displacements of $00 through $7F (indicating branches forward) may be added without sign extension. In any event, the result is the jump address of $3E00. The BRA FIRST could have been replaced with a JMP FIRST instruction, but this instruction would have used three bytes instead of two bytes and not have been relocatable.

There's a way to make all instructions relocatable. It's a special addressing mode called "program counter relative." An example is shown here:

```
3EØØ                ØØ1ØØ          ORG    $3EØØ
3EØØ A6 8D ØØØ8     ØØ11Ø          LDA    ARG1,PCR
3EØ4 E6 8D ØØØ5     ØØ12Ø          LDB    ARG2,PCR
3EØ8 6E 8D ØØØ2     ØØ13Ø  FIRST   JMP    NEXT,PCR
3EØC    ØØ          ØØ14Ø  ARG1    FCB    Ø
3EØD    ØØ          ØØ15Ø  ARG2    FCB    Ø
3EØE FD ØØØØ        ØØ16Ø  NEXT    STD    BOTH
3E11 86 Ø1          ØØ17Ø          LDA    #1
```

The machine language assembled for the LDA ARG1,PCR starts off with an op code of A6, followed by an addressing mode byte of 8D. The addressing mode byte is used by the 6809 to determine how the address should be computed. In this case, the effective address is computed by adding the contents of the program counter to the displacement value of 0008, found in the third and fourth bytes of the machine language. The program counter points to $3E04 at this point so:

```
  $3E04
+ $0008
  ----
  $3E0C
```

he D register to an integer value and returns in the variable used on the left side of the USR call.

Here's a simple example of the whole process. The assembly language subroutine adds one to an input argument and returns the incremented value. It's a useless subroutine, but it'll give you a better idea of how the process works.

```
10  TRIVIAL AL SUBROUTINE
11 CLEAR 1000 &H3DFF                    protect memory
12 CLS
13 FOR I=&H3E00 to &H3E09               move mach lang
14 READ A  POKE I A
15 NEXT I
16 DEFUSR0=&H3E00                       define start of ml
17 INPUT "VALUE=",V                     input value
18 V = USR0(V)                          call al subroutine
19 PRINT "VALUE NOW"  V                 return and print
20 GOTO 170                             loop
100 DATA &HBD &HB3,&HED &HC3,&H00,&H01
200 DATA &HBD &HB4,&HF4,&H39
```

The assembly language code for this is:

```
0000 BD B3ED   0010      JSR    $B3ED   'convert input
0003 C3 0001   0011      ADDD   #1      'bump by one
0006 BD B4F4   0012      JSR    $B4F4   'reconvert
0009 39        0013      RTS            return
```

As you can see from the assembly language program, the only processing actually done in the program is to add one to the contents of the D register. The first JSR converts the input argument (found in variable V in the BASIC program) to a value in D. The second JSR reconverts the contents of D (now V plus one) to variable V for output. The RTS, of course, just returns to BASIC.

Packing Arguments

Although only one integer value is allowed, there's no reason several arguments can't be packed into that single value. Suppose you have an assembly language subroutine to move a character around the screen. The inputs to the subroutine would be the character and the speed of movement. These two arguments could be packed into the single 16-bit integer value of the USR call by doing this:

```
100  MOVE CHARACTER SUBROUTINE
110 CLEAR 1000,&H3DFF                   protect memory
120 CLS
130 FOR I=&H3E00 to &H3EXX              move mach lang
140 READ A  POKE I A
150 NEXT I
160 DEFUSR0=&H3E00                      'define loc'n of al
170 INPUT "CHARACTER=" C$               'input character
175 INPUT "SPEED (0-255)=" S            'input speed
176 CLS
180 A = USR0( ASC((C$)*256+S)           'pack two arguments
200 GOTO 170                            'return here
```

The character is converted to an eight-bit ASCII code by the ASC(C$). It is then *packed* into the most significant byte of the input argument by the ASC(C$)*256. The speed is also an eight-bit value and is in the least significant byte of the input argument. In the assembly language subroutine, the two arguments appear in the D register as shown in Figure 1, after they have been converted by a JSR $B3ED.

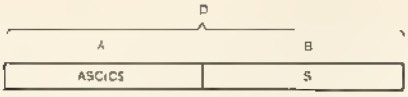

Figure 1: Packing Two Arguments

This same scheme of packing multiple arguments can be used for input and output to pack as many as 16 single-bit arguments into the input or output parameter. On the input side, the arguments are packed by multiplying the value by a power of two so that it's shifted left and adding in other arguments. On the output side, the arguments are unpacked by ADDing and then dividing by the same power of two. Some examples are given in Figure 2.

ARG1	ARG2	ARG3	ARG4

```
Input
100 D=ARG1*4096+ARG2*256+ARG3*16+ARG4
110 A=USR0(D)

Output
110 A=USR0(D)
120 ARG1  INT(A/4096)
130 ARG2= INT((A-ARG1*4096)/256)
140 ARG3= INT((A-ARG1*4096 ARG2*256)/16)
150 ARG4=A-ARG1*4096-ARG2*256-ARG3*16
```

Figure 2: Packing Four Arguments

Parameter Block

Another way of passing multiple arguments to and from an assembly language subroutine is by a parameter block. The parameter block is a special area in memory set aside to hold input and output arguments. A simple example of this is shown in Listing 1, which is the partial assembly language listing of the move character subroutine. The first two bytes of the subroutine are reserved for the character and speed input parameters. The actual subroutine starts at &H3E02 rather than &H3E00.

The BASIC code for calling this subroutine is:

```
100  MOVE CHARACTER SUBROUTINE
110 CLEAR 1000,&H3DFF                   protect memory
120 CLS
130 FOR I=&H3E00 to &H3EXX              'move mach lang
140 READ A  POKE I A
150 NEXT I
160 DEFUSR0=&H3E00                      'define start of al
170 INPUT "CHARACTER=",C$               'input character
175 INPUT "SPEED (0-255)=",S            'input speed
176 CLS
180 POKE &H3E00, ASC(C$)                poke character value
190 POKE &H3E01, S                      'poke speed value
200 A = USR0(0)                         go to al subroutine
200 GOTO 170                            'return here
```

The USR call uses dummy arguments rather than packing the two input parameters into a single argument. The two input parameters are stored in &H3E00 and &H3E01 by two POKEs. As long as the input parameters are byte values (zero to 255), the POKEs work fine. The assembly language subroutine does not make a call to $B3ED, as there is no argument to convert. It simply picks up the first argument from &H3E00 (character) and puts it into A and the second argument from &H3E01 (speed) and puts it into B.

This concept can be used to pass any number of arguments. Just allocate a large enough chunk of memory to accommodate all of the input and output arguments and then do POKEs before the subroutine is called and PEEKs after the subroutine is called to access the arguments.

It's important to note that the parameter block holding input and output arguments must be in a protected portion of memory. Any address greater than the CLEAR address can be used, and the parameter block can be before or after the actual subroutine. Don't forget to specify the actual starting address of the subroutine, rather than the start of the parameter block, if the parameter block is located before the subroutine.

Using VARPTR

The VARPTR function in BASIC is also handy for passing parameters to assembly language subroutines. The VARPTR function returns an address to a specified variable. Suppose that you had a variable called AA. This code:

```
100 AA=3
110 B=VARPTR(AA)
120 PRINT PEEK(B) PEEK(B+1),PEEK(B+2),PEEK(B+3),
    PEEK(B+4)
```

prints 130, 64, 0, 0, 0. Where's the 3? That's a long story.

You'd expect to see a zero byte followed by a three byte, representing a binary integer number of three. However, Color Computer BASIC variables are always a "floating-point" format, even when you are working with integer limits, such as PEEKs and POKEs. The 130, 64, 0, 0, 0 represents a power of two equal to 130 minus 128 and a fraction of 0.11000000. The result is the power of two (2 squared or 4) multiplied by (½ + ¼) = 4 × (¾) = 3. This is not the easiest way to represent numbers, and it would be very tedious to have to convert to this floating-point format every time you wanted to pass parameters to assembly language. The floating-point representation is why the JSR $B3ED and JSR $B4F4 are used to convert and reconvert variables passed to and from assembly language subroutines.

There's nothing that says that a dummy variable cannot be used to store parameters, however. This code stores 100, 45, 233, 15 and 37 in the location of dummy variable AA. The location of the dummy variable AA is then passed to the assembly language subroutine. However, the assembly language subroutine must still go through the "convert" subroutine to get a 16-bit address value in D to point to dummy variable AA.

BASIC:

```
100 AA=0
110 B=VARPTR(AA)
120 POKE B,100  POKE B+1,45  POKE B+2,233  POKE B+3,15
    POKE B+4,37
130 DEFUSR0=&H3E00
140 A=USR0(B)
```

More Interfacing Tricks for Assembly Language and BASIC

By William Barden, Jr.
Rainbow Contributing Editor

Last month we described the elementary steps in tying together short assembly language subroutines with a BASIC program. Although assembly language is a more difficult language in which to write computer programs, it offers one big advantage over BASIC and other "high level" languages — speed. There are many things that can be done in assembly language that just cannot be done in other languages. In the last column we suggested you start using assembly language by interfacing, or joining together, short assembly language subroutines to improve your BASIC program's efficiency.

We discussed the difference between assembly language and machine language — machine language is made up of the binary data the 6809 recognizes as part of its instruction set while assembly language is a more English-like representation of instruction mnemonics. The assembly language form is translated into machine language by a program called the assembler, typically the Radio Shack *EDTASM+* assembler.

We also described some assembly language programs and mechanisms to interface them to BASIC. The BASIC statement that defines where in memory the assembly language code resides is DEFUSR, as in `110 DEFUSR = &H3E00`. The BASIC statement to actually make the jump is USRn, as in `180 A = USR0(0)`. Each assembly language subroutine must have an ending RTS instruction, which acts like a BASIC RETURN statement, returning to the point just after the USR call.

Before an assembly language subroutine can be used, however, the memory area in which it is to reside must be protected by a BASIC CLEAR statement, as in `110 CLEAR 1000,&H3DFF`. This prevents BASIC from overwriting the machine language bytes as it stores data such as strings and its own internal variables. The machine language code making up the assembly language subroutine is moved into this protected area by loading a machine language program from disk or cassette, or by reading DATA statements in BASIC and doing a series of POKEs. We chose the POKE route for our examples.

The USRn statement in BASIC has an argument in it that represents an integer value. A single integer value can be passed to the assembly language subroutine by this argument in a statement such as `180 A = USR0(1000)`, which passes the value of 1,000. The assembly language subroutine may pass an argument back by the USR. The argument is returned in the variable on the left side of the USR statement; in this example, Variable A contains the result. However, it's perfectly all right to pass no arguments and to use dummy variables in the USR statement.

We'll continue with more tricks in interfacing assembly language with BASIC in this column

Passing Multiple Arguments to AL Subroutines

The argument passed to an assembly language subroutine must be an integer argument — a numeric expression, variable, or combination that can be resolved down to the value of 32768 through +32767. Here are some typical USR calls

```
10Ø A = USRØ(1ØØØ)
2ØØ VX = USR1(AC)
3ØØ AN = USR4(1ØØØ - ZT)
```

Passing One Argument

In the assembly language subroutine itself (as we saw last month), the code must do a JSR $B3ED to convert the input argument to a 16-bit value in the D register (the A and B accumulators). After this is done, the assembly language subroutine can use the input argument as required to define a delay, to point to a work area, to define a character, or any other application.

To pass an argument back to BASIC, a JSR $B4F4 is done in the assembly language code. This converts an output argument in

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years experience in the industry covers a wide background: programming, systems analyzing and managing projects ranging from mainframes to microcomputers.

he CD interface. The article also said that OS-9 operating language will be used in hese interfaces Have you heard about this r is it just another rumor?

Jim Casselman
Goodfellow AFB, TX

Jim, the 68000 microprocessor and Miroware were the hot subject of discussion t the last RAINBOWfest Microware has een awarded a contract to develop the perating system for Phillips and Sony, the wo pioneers in Compact Disc technology. t seems to be the next major breakthrough n storage media. I can't wait to see one.

Device Overload

● *I have a 64K Color Computer 1 with a J&M disk drive system and a DCM-5 Auto/Answer modem. How does one operate a disk controller, a DS-69A Digitizer, a* CoCoMax *joystick port and an RS-232C Deluxe Pak all at once? It is all on one switch, and obviously it would be very difficult to switch to each slot. This leaves the option of switching using software*

Jeff Wozniak
Apply Valley, MN

Even though you can both hardware-, and software-select a Multi-Pak slot, the address and data lines are connected to the device at all times, Jeff. This means by adding address decoding circuitry to the accessories you mention, they can all be resident at the same time. Remember, the CoCo can switch between these devices about 250,000 times a second

Nonexistent Clock Signal

● *I recently purchased a VIC 1525 graphics printer by Commodore. It resembles the DMP-100 printer by Radio Shack.*

I would like to use the 1525 with my CoCo. Can it be done? What wiring configuration do I make to connect serial I/O ports?

Philip Tack
Worthington, PA

Philip, according to the diagram you sent us, the VIC 1525 requires a clock signal from the computer. This signal is not present on the CoCo serial port.

Disk Drive Debate

● *I am debating buying a hard disk or a floppy disk drive. How compatible is an Amdek hard disk with the software on the market, and how much extra storage does it have?*

Byron Fast
Kleefeld, Manitoba

Byron, I am not aware of an Amdek hard disk. I do know that Amdek makes a 3½ inch floppy disk. It is the same as a 5¼ inch floppy disk, except it is packaged a little differently. It has the same storage capacity. I would recommend you have at least one 5¼ inch disk drive in your system.

New VDG for Older CoCos

● *The CoCo has an MC6847 Video Display Generator (VDG) that is less than perfect. Motorola has designed a new VDG, the MC6847T1, which will soon be released for full production. What does it do? It makes clearer symbols, changes the 'o' from square to circular, adds a slash to the zero and gives lowercase with descenders. The MC6847T1 has a data latch 74LS273 and a buffer 74LS244 on board.*

How can you use it? Find the VDG (MC6847T1) when released. Remove the 74LS273 from the circuit board and jumper the socket so the lines go straight through Use two sockets (40 pin) to make a jumper socket for the VDG. Jumper the data lines 3 through 8. Connect pin 10 to pin 25 with a 2.5K ohm resistor. This allows pseudo colors. Connect pins 12, 17 and 24. This disables the I/O lines not used by the CoCos. This is the area that replaces the 74LS244 (buffer). It would require extensive wiring to use it. Connect pin 13 of the VDG to pin 11 of the 74LS273 socket. This is the RAS signal and it stabilizes the output. Connect an SPDT switch by connecting one side to pin 1 of the VDG, center to pin 31 of the VDG, and the other side to pin 31 of the VDG socket. Make sure pins 12, 13, 25, 26 and 31 are not connected through to the circuit board side

What happened to the lowercase? This is caused by a ROM text screen 0 reset; to disable it use POKE 359,57. *The only problem with this poke is that if you are running a graphics program and have an error in it, the text screen does not come back with the error message. You must enter text screen. Next enter* POKE 65314,X.

If X is:	Text is:
0-7	Black letters on green uppercase and reverse video.
8-15	Red letters on orange uppercase and reverse video.
16-23	Black letters on green uppercase and lowercase.
24-31	Red letters on orange uppercase and lowercase.
32-39	Light green letters on dark green uppercase and reverse video.
40-47	Orange letters on red uppercase and reverse video.
48-55	Light green letters on dark green uppercase and lowercase.
56-63	Orange letters on red uppercase and lowercase
64-71	Dark green letters on light green uppercase and reverse video.
72-79	Red letters on orange uppercase and reverse video.
80-87	Black letters on light green with light green border uppercase and lowercase.
88-95	Red letters on orange with orange border uppercase and lowercase.
96-103	Light green letters on dark green uppercase and reverse video.
104-111	Orange letters on red uppercase and reverse video.
112-119	Light green on dark green uppercase and lowercase.
120-127	Orange letters on red uppercase and lowercase.
128-255	Graphics.

You can get data sheets on the MC6847 and MC6847T1 from Motorola, as well as any other component they produce, by requesting it.

William Capich
FPO, NY

Thanks for the information, William. There seems to be a lot of interest in the 6847T1, and due to your help we can all put one in our older CoCos now.

Memory Exploration

● *I'm writing a machine language program to allow exploring CoCo memory. I want it to work in 64K RAM mode without the ROM support. I have to build every routine and most of them are finished except two:*

INKEY *— I can't figure out how I can scan the PIA for the* SHIFT *key.*

RS-232 — I don't understand how to send information to the printer and how the timing process works.

Marc Gagnon
Cap-de-la-Madeleine, Quebec

Marc, you need to obtain a disassembly of BASIC to fully understand the INKEY$ and RS-232 routines. *Color BASIC Unravelled* will do nicely.

If you want to try on your own, the INKEY$ routine starts at $A564. The test for the SHIFT key routine is at $A22E. The RS-232 output routine starts at $A2BF. All of the above addresses are for Color BASIC 1.2. Good luck.

Your technical questions are welcomed. Please address them to: Downloads, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We reserve the right to publish only questions of general interest and to edit for space and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Non-Standard Disk Drive Troubles

By Dan Downard
Rainbow Technical Editor

• *I have a problem with a Tandon Disk drive I system. I own a 64K Extended BASIC CoCo 2 and a TRS-80 Drive 0 with Disk BASIC 1.1 (Cat. No. 26-3029).*

When the Tandon Drive 1 is connected, it works fine, but when I try to use my Radio Shack Drive 0, I always get an I/O Error. To use the Radio Shack Drive, I have to disconnect or turn off the Tandon Drive.

When both are connected, the indicator light on the Radio Shack Drive goes on, but the head inside the Tandon Drive goes back and forth searching for the program or tries to read a directory for Drive 0.

Ben Takemura
Honolulu, HI

Ben, it appears that the drive select lines on your Drive 1 are being enabled for both Drive 0 and Drive 1. A normal disk drive uses two pins for drive select and has binary decoding circuitry to distinguish which drive it's supposed to be. CoCo disk systems use a separate drive select pin for each of four possible drives.

Get a copy of the RAINBOW for July 1985 and read "Getting On the Right Track" by Colin Stearman. This is an excellent article discussing the use of non-standard disk drives (non-Tandy) with a CoCo.

Dan Downard is an electrical engineer and has been involved in electronics for 27 years through ham radio (K4KWT). His interest in computers began about eight years ago and he has built several 68XX systems.

Keep Your Cool

• *Some time ago someone offered a schematic to change the RS Modem I to auto-answer (and possibly auto-dial). I would like some information, please.*

I own an F board and am running 64K, one drive, 1.1 Disk BASIC and 1.1 Color BASIC. I have upgraded to 150 ns 64K chips, a 68B09E and a 68B21. I am able to run the CoCo in 3x mode and, about 50 percent of the time, retain graphics. Is there anything I can do about the 2N6594 transistor which creates a heat problem? I replaced it with heavy-duty NTE219 and heat sunk it, but I still need to run a fan on it.

Kenneth Harman
Bakersfield, CA

You are correct Kenneth. In the November 1984 RAINBOW, Tony Sharp wrote an article on how to convert a Modem I to auto-answer. It was titled "Adding an Auto Answer."

The only thing a heat sink does is allow the heat to dissipate. Unless the heat sink is external to the computer, the heat stays inside until air from the ventilation holes cool it. It's best not to block the ventilation holes by enclosing your computer If you do, it's necessary to add a fan to get rid of the heat.

Elusive I/O Error

• *I am 12 years old and I own a 64K Color Computer 2 and a CCR-82 cassette recorder. Whenever I try to load a long program I receive an I/O Error. Sometimes, such as early morning, everything works fine. When I take my equipment to Radio Shack it works great! I take it home and it doesn't work.*

I have tried everything, cleaning the heads, turning off different appliances etc., but it still does not work. Any help would be appreciated.

Josh Alkire
Toledo, OH

It sounds like you have some type of power line disturbance in your home, Josh. I suggest you operate the tape recorder from batteries just to see if it's the power line

Half-Power 64K?

• *I have a 64K ECB CoCo and a cassette recorder. I know that without a disk drive and operating system I can only access 32K RAM. Does this mean I only have a 32K system or can I run cassette programs like* The Sailor Man *that require 64K?*

Mike Frei
Horicon, WI

Mike, you don't need a disk drive, or an operating system to use 64K in your CoCo. You can indeed play your favorite 64K games from tape. A disk operating system allows for more efficient use of your 64K, but it's not necessary.

CD Rumors A-flyin'

• *I read in the Computer Shopper that the 68000 processor will be used as the CPU for*

The Crossword Creator Contest

Can you create a totally symmetrical crossword puzzle using the *Word+* program and the specifications outlined in the accompanying article on Page 38 of the May 1986 issue of THE RAINBOW? If so, you may wish to enter The Crossword Creator Contest. And, if we choose to print your crossword puzzle, you will be awarded a special prize.

Send us a disk or cassette copy of the data file of your puzzle created by *Word+* along with a printed copy of the crossword puzzle — including the clues and answers. Be sure to put a title on the puzzle and if possible, follow a general interest theme.

Entries will be judged on the following criteria:

- Puzzle symmetry
- Number of words
- Spelling
- Creativity
- Thematic originality
- Understandability
- Ease of loading data
- Neatness
- Packaging

Enter as often as you like! Please note: We consider your act of entering the contest as consent to publish your creation.

The Crossword Creator Contest is open to all RAINBOW readers, advertisers and employees of Falsoft, Inc.

Send entries to:

cursor drawing, fast and clipped.

The cursor is put down byte by byte rather than dot by dot to speed up the drawing. If only one image of the cursor was used, there would be only 32 positions across the screen. But the shape data has four-image offset (0,1,2,3) to give 128 positions. Of course, there are 192 positions up and down.

TURNOF (Line 28300) is the turn off cursor function (zero). This subroutine resets the cursor-enable bit and turns off the cursor.

CUROFF is used to remove the cursor if it is on the screen. The cursor is removed by getting the old screen data from CURBUF and putting it on the screen. As with the cursor draw there are two types of removes, fast and clipped.

DSABLE is the subroutine for function number six, disable (or unlink) *The Mouse*. After turning off the cursor, the old interrupt, output and command vector are restored.

SELJOY is for functions nine to 13, select joystick type.

BASIC's 60-hertz interrupt vector is passed through IRQ to move the cursor, poll the joystick and button status. First the status cursor and HOLD flag are tested along with the joystick position to see if it has moved. If the cursor should be removed, then CUROFF is called. Next, if the cursor should be turned on (because of a new position or hold is no longer on), then CURON is called.

Lines 37800 to 38100 call BASIC's old interrupt subroutine. The disk drive MOTOROFF and TIMER function will still work. Before end, the interrupt subroutine, the joystick and button status are polled.

At the end of Listing 1 are three +GET instructions that include the other files needed to assemble the program. This +GET of my assembler is very similar to the USE directive of the OS-9 assembler.

The FCC in lines 40900 to 41300 adc the copyright text to the end of *The Mouse* program. ENDPRG is the length of the program.

Mouse 2 (Listing 3) is the joystick drivers used by *The Mouse*. The table of offsets called JOYTAB, is used by JOYSTK to call the right subroutine. Each polling subroutine updates the button up/down status flag (BUT DWN) and returns the Y-position (zero to 191) in the A register and the X-position (zero to 127) in the B register.

Next month we will look at *The Mouse* source code for the Hi-Res screen text driver in files four, five and six.

Editor's Note: Since this month's and next month's listings are intended for reference purposes, no addresses appear with the assembly language listings. The listings are available for downloading from the SOURCE FOR 6809 ASSEMBLERS topic area of the Delphi CoCo SIG database. □

rick to use the full range of the 5-bit offset (–16 to 15) is to set the U register .6 bytes in the variable list. The value of the first variable is now –16 (previously zero), still in the 5-bit range. But now 16 more bytes (and a few more variables) can use the faster 5-bit offset.

Let's see how the first file (Mouse 1 — Listing 1) breaks down. The first 13 lines are the standard comments and copyrights. SSTART and SEND are constants for BASIC's screen pointer variables in direct page. SSTART holds the starting address of Hi-Res screen memory and SEND holds the ending address plus one.

The first instruction is a long branch over the program variable tables, data buffers and command offset vectors to the USR handling code. The next 386 bytes is the shape data for the Hi-Res cursor. By loading data over this space, a new cursor shape can be displayed.

COMTAB is a table vector offset for the 13 user functions. Each 16-bit entry in the table is an offset (how far way) from the start of the table to the address of the function.

Next is the variable list used by the program. The Data label is set up 16 bytes into the list for maximum use of the 5-bit offset.

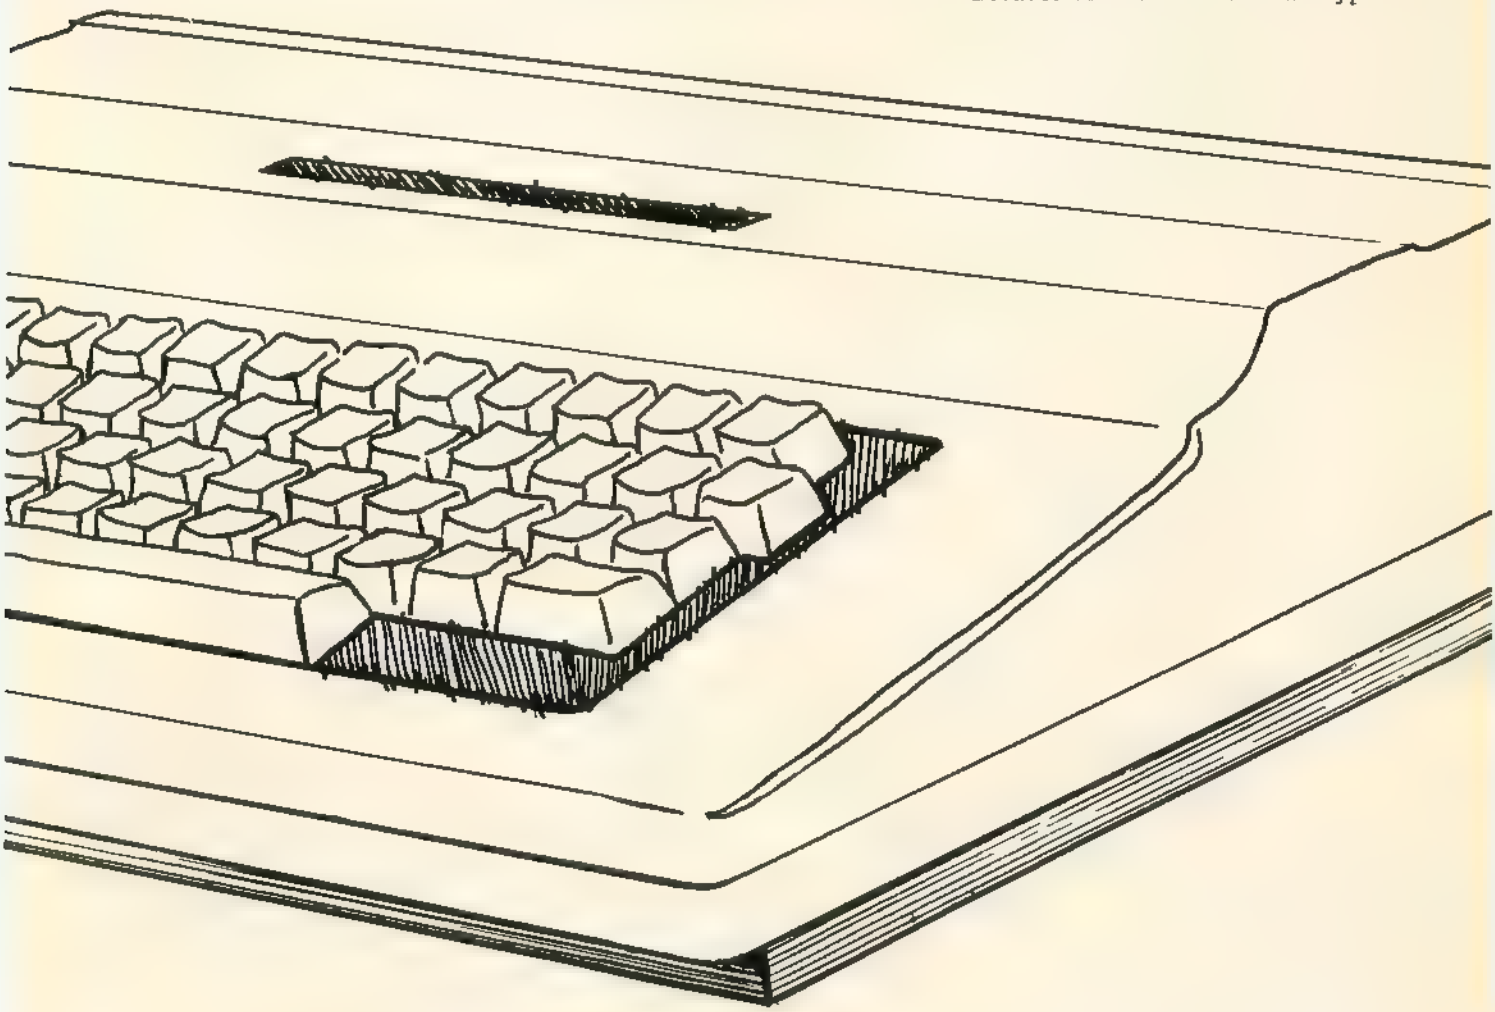
CURBUF is the buffer for saving what's on the screen before the cursor is placed. The cursor is removed by copying the old screen data from this buffer to the screen's memory. COMBUF is used as BASIC's command vector to intercept the '@' function in the PRINT command.

So much for the variables and buffers, now for code. First is the USR function and commands. The routine first checks to see if *The Mouse* is linked into BASIC's system. If needed, it hooks into the 60-hertz interrupt, output port and the PRINT command.

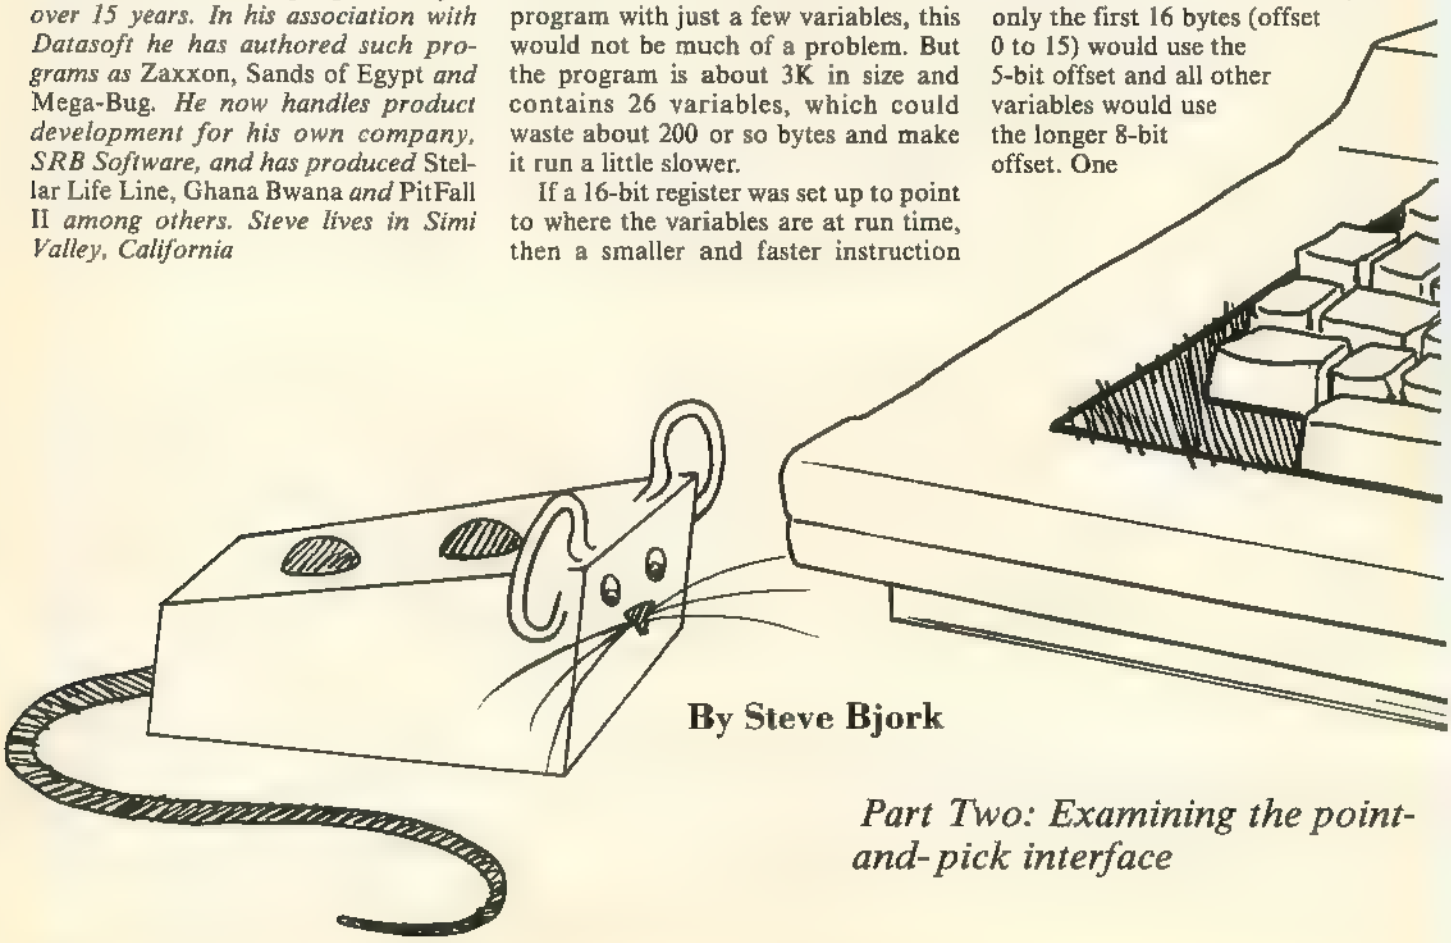
Down at the label USR1 (Line 13900) the program tests for a string variable and aborts if it is. After getting the function number, the program jumps to a subroutine based on it. When the program returns, the number is passed to BASIC and ends the USR function. The subroutines for USR functions two to four are in lines 15800 to 17100.

TURNON (Listing 2) is used to perform function 1, turn on the Hi-Res cursor. This subroutine sets the cursor-enable bit of the cursor-status flag byte and draws the cursor on the screen.

CURON is the code that does the drawing. After checking if it's OK to draw, it finds the screen's memory location for the cursor and determines if it should use the clip draw. A clip drawer only draws the part of the cursor that is on the screen. A clipper could be used even when it is not needed, but it is very slow, about seven times slower than the cursor draw without clipping. Because of this there are two types of



What's Inside a Mouse?



By Steve Bjork

Part Two: Examining the point-and-pick interface

To refresh your memory, *The Mouse* is an assembly language program that displays and moves a cursor and prints upper- and lowercase text on the Hi-Res graphics screen. A BASIC program may access this interface by 13 user functions and the PRINT command.

This month we are going to dive into the assembly language source code and see just how *The Mouse* does its magic. Because *The Mouse* is about 35K bytes long, it is broken down into six files. We will talk about three of them this month. We will see the assembly language side of the USR function and PRINT command along with the code for drawing the cursor (pointer). Also, we will look at how the joystick and button information is polled.

Steve Bjork has been a programmer for over 15 years. In his association with Datasoft he has authored such programs as Zaxxon, Sands of Egypt *and* Mega-Bug. *He now handles product development for his own company, SRB Software, and has produced* Stellar Life Line, Ghana Bwana *and* PitFall II *among others. Steve lives in Simi Valley, California*

Before getting started I should remind you that *The Mouse* and its source code are copyrighted (1986) by SRB Software with all rights reserved. It is presented in RAINBOW magazine for private use only and cannot be used (all or part) in any marketed product without written consent from SRB Software.

A Few Points about Relative Code

The Mouse is a code-relative program just like OS-9. The only difference is there is no direct page for the program (the direct page is already used by BASIC's system variables). The standard for address relative variables is LDA YJOY,PCR.

This instruction (when using a 16-bit offset) is about four bytes and nine clock cycles long, a little on the big and slow side. If *The Mouse* was a small program with just a few variables, this would not be much of a problem. But the program is about 3K in size and contains 26 variables, which could waste about 200 or so bytes and make it run a little slower.

If a 16-bit register was set up to point to where the variables are at run time, then a smaller and faster instruction could be used. In *The Mouse* the U register (User stack pointer, but no used by BASIC as such) is pointed to th variable block. The previous exampl could be changed to LDA YJOY,U.

True, it does not look that different but it is only about 2 bytes and 5 cloc cycles long (about half the time an size). In *The Mouse* two types of offset are used, 5-bit and 8-bit. The 5-bit offse has an advantage over the 8-bit by bein one byte shorter and one clock cycl faster. But there is one problem with th 5-bit offset, its limited range of -16 t +15 from where the pointer is address ing. Any offset out of this range mus use an 8-bit offset, which is longer an slower. For this reason the most used variables are placed at the start of the variable table.

If the U register was just a pointer to the start of the variables list, only the first 16 bytes (offset 0 to 15) would use the 5-bit offset and all other variables would use the longer 8-bit offset. One

f you don't need graphics, type PCLEAR1. On a tape-based system you can type POKE 5,6:NEW

Unless Brother has changed its design, hat 12-pin connector is not a standard serial ort. You must send the signal from it to an dditional optional $150 device sold by Brother, called the Brother IF 50 Interface. The IF 50 Interface plugs into the typewriter t one end with the required 12-pin plug, and t the other end provides a buffered (2K size) erial and parallel port (you select one by a witch on the IF 50).

On the DB-25 plug, which you will plug nto the IF 50 Interface, you must short pins 4, 6 and 8. Then, hook up that plug via a hree-wire cable to the standard CoCo four-pin DIN connector in the following manner: Pin 3 of the CoCo DIN goes to Pin 7 of the DB-25 which will plug into the IF 50, Pin 4 of the CoCo DIN goes to Pin 3 of the DB-25 plug, and Pin 2 of the CoCo DIN goes to Pin 20 of the DB-25 connector. You will also have to properly set the Baud rate and word length, etc., on the IF 50 and the CoCo.

• *I noticed a peculiarity when writing a space game in BASIC's* PMODE 4. *The blue ship I drew might be red the next time I turn on the computer or press the Reset button. Why is this? Is there any way to predict what color it will be?*

Jason France
Yuba City, CA

You have discovered the "artifact color flip" peculiarity of the CoCo. The Video Display Generator (VDG) chip initializes itself to either the rising or the falling edge of the video clock at any power up or reset cycle in a manner that is both random and can neither be detected nor affected by software. This determines whether your ship will be red or blue (and whether the background will be blue or red!). There is no way to predict or control which set you will get unless you make some very sophisticated hardware modifications.

• *When running artifact color programs like* Black Sanctum *and* Pitstop II, *my CoCo 2 presents a red and green artifact color set, not the red and blue set the game's instructions say I should have. Is something wrong with my computer?*

Todd A. Black
Merced, CA

Before I can tell if something is wrong with your computer, I'd need to know if you are using a TV or a monitor. Have you tried adjusting the tint control on your TV or monitor? You might be able to adjust it to become red-blue using the tint control. If not, you may have a problem in your TV, monitor, computer or, most likely if you are using one, your color video monitor driver circuit

---

• *My Extended BASIC 64K 'F' board computer loses all color when I press Reset. Replacing the VDG chip did not help. I damaged the "flying circuit" in the plastic tube while I was working on my computer. The colors I do get are now strange. This circuit is not shown in the schematic I have. Do you know the values of the components?*

Edwin J. Mullican
Gulfport, MS

The CoCo I 'F' Board is a particularly odd case, because Tandy went into production with a board that in most cases simply failed to produce artifact colors. They had to add a fix after production of the board; that is the thing you referred to as the "flying circuit."

The flying circuit consists of a 33K ohm resistor, a 27-micro henry inductor (choke) and a 75-pico farad capacitor all hooked in series, with one end connected to Pin 33 of the VDG (the video clock line) and the other connected to the composite video input to the Aztec RF Modulator. This point can also be found on the circuit board as the junction of R45 (470 ohms) and R45 (1 5K ohms). The video clock signal can also be picked up at one end of R37 (10K ohms).

Note that early models of the CoCo I 'F' board had a different sort of fix: Tandy merely soldered a 56K ohm resistor between Pin 2 and Pin 12 of the 1372 chip (U6). You might want to experiment with using resistors between 33K and 56K between pins 2 and 12 of the 1372 chip. In your testing, be sure to solder the resistor directly to the chip. The test won't be valid if you use any kind of jumper clip cables.

• *I am interested in a quality printer that is both fast and does not produce "dotty-looking" characters. In general, I have not seen print quality that I like from less than a 24-wire print head. What do you recommend? I do not want to get involved in interfaces or DIP switch settings or changes in wiring.*

Dorothy Dow
Jacksonville, FL

Brands to look for are Toshiba and Fujitsu, both of which, in my opinion, make better high-end 24-wire print head printers. Some of the slower Toshibas are offered for under $600

There is no way to avoid having to set DIP switches on printers no matter what printer or computer you own. Under Disk BASIC, essentially all features of any printer except proportional spacing can be accessed using *Telewriter* or *VIP Writer*. Under OS-9, *Stylograph* allows use of proportional spacing options.

• *I own a Zenith 123A monochrome monitor and a Mark Data Products video driver. Both work well on my CoCo. The Zenith is rated at 640 by 200 dots resolution, or 15 MHz band width. I see other monitors comparably priced rated at 700 by 200 dots and 20 MHz. What is the best resolution the CoCo can handle? What do add-ons like the* Word-Pak RS *and the DISTO 80-column card do for the CoCo's resolution?*

Bill Condie
Freehold, NJ

All monochrome monitors have adequate resolution to display the CoCo's Hi-Res image of 256 by 192 pixels. Indeed, specifications such as dot resolution and megahertz band width are not good indicators in determining if one composite monitor is better than another. You simply must compare monitors with your own eyes.

Both the *Word-Pak RS* and the DISTO 80-column card have separate video signal creation hardware that produces a higher resolution video signal for display of text (only) in an 80-column by 25-line format. The DISTO card has the advantage of supporting underline and boldface display, and the *Word-Pak RS* has the advantage of allowing a hacker to tinker with both its character set and its display parameters to match it to odd-ball monitors. Both draw their characters in a roughly 5 by 7 matrix on a 640 by 200 pixel resolution screen. Compare this with the 256 by 192 pixel matrix that is the maximum a normal CoCo can display.

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P.O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

For quicker response time, your questions may also be posted in the FORUM section of RAINBOW's CoCo SIG on Delphi. In FORUM, type ADD and address your questions to the username MARTYGOODMAN. Marty is on most every evening to respond to FORUM messages, and other CoCo SIG members may also reply to questions posted in this public message area. Please be sure to leave your name and address in any FORUM questions, since those of wide interest will be selected for publication in this column.

Introducing a new Rainbow column . . .

Remedies from the CoCo Clinic

By Marty Goodma

• *I would like to upgrade my old (gray) CoCo to display lowercase characters and would like to know what type of VDG is used. Is it a new standard IC, and if so, what is the type number, or is it a custom MC-6847 specially made for Tandy?*

J.P Schreur
the Netherlands

I suggest you purchase one of the lower kit adaptors commercially available. These are boards that utilize the ability of the old 6847 to derive its character set from an external character generator EPROM. One is made by Green Mountain Micro of Roxbury, Vermont. It offers the advantage that you can reprogram the character generator EPROM with your own character set of choice.

• *I need to purchase a color monitor. While referencing ads in RAINBOW I see that some monitors do not have a Hi-Res dot-matrix of 255 by 192 dots. How could this affect the CoCo display if the monitor matrix is 300 by 300 dots, or 200 by 200 dots? Also, is there another VDG available for my CoCo that would change the Hi-Res dot-matrix from 255 by 192?*

Charles Stierhoff
Dallas, TX

Essentially, any make or model of composite color monitor will work fine on the CoCo. The ads that claim a given dot resolution merely refer to the maximum possible resolution the monitor can display. Thus, a monitor rated at 300 by 300 will nicely display the 256 by 192 CoCo Hi-Res screen. I do not believe there is a color monitor with resolution below 256 by 192.

• *I purchased a 16K standard BASIC CoCo 2 and upgraded it to 64K ECB myself. I [later] purchased a second CoCo 2 16K and when I went to upgrade it to 64K ECB I found the PC board had changed. The PC board we have is Revision F. When I talked with the Radio Shack Computer Center they told me this board is [difficult] and costly to upgrade — the price is $120. You can purchase a CoCo 2 64K ECB for about $150. The price to perform the upgrade does not make economic sense. Is there a solution?*

John Huth
SCS, MI

It would have helped if you had given the catalog number of the CoCo 2 you want to upgrade, but it sounds like an A or B model (number 26-3134A or 26-3134B). Inside this model are two (not eight) socketed RAM chips, usually flanked by two white single inline female connectors. Each of these chips (numbered 4416) has a total of 18 pins, not 16 like the RAM chips in older CoCos. They are found more or less in the center of the circuit board

If your CoCo meets this descriptio upgrading to 64K is both cheap and simpl First, purchase two 4464 RAM chips. (The are available from Microprocessors Unlin ited of Beggs, Oklahoma, phone 918-26 4961, for roughly $4.50 per chip.) Remov the two old 4416 chips and replace them wit the 4464 chips. Look to the left and the fro (toward the keyboard) from the area wit the two RAM chips; you will spot tw jumper solder pads enclosed in a whit rectangular-like screen box drawn on th circuit board, labeled either J4 or 64K c both. Just connect those two points togethe (using a short piece of wire and a low-powe soldering iron) and your upgrade is com plete.

• *When I turn on my Color Computer an ask for the amount of available memory, returns about 22K (I have a 64K computer, What instruction do I give to obtain th most amount of memory?*

My typewriter is a Brother Compactron 60 and is computer-interfaceable. I hav contacted the manufacturer and they indi cate that it is fully compatible with the Colo Computer. Unfortunately, its serial port ha 12 pins. Do you know where I can get a 12 pin male plug?

Anthony Depalm
Plainfield, N.

The BASIC operating system of the CoCo was only designed to use 32K of RAM To use all 64K you need to write or buy appro priate machine language programs, or use OS-9. Expanding available memory for use with Disk BASIC is virtually impossible because of the machine setup and the way BASIC was written in the ROMs However to get the most memory on a disk system,

---

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. Marty is the database manager of RAINBOW's CoCo SIG on Delphi. His noncomputer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

Protect Your Valuable Magazine Collection With . . .

DISTINCTIVE, DURABLE RAINBOW BINDERS

For greater convenience, order RAINBOW Binders through the shopping area of the CoCo SIG on Delphi

Each issue of THE RAINBOW is a vital resource that you will refer to again and again, to gain insights, to explore new areas of interest or simply to refresh your memory. So, you need to keep your copies of THE RAINBOW safe — in high-quality, vinyl binders that provide complete protection.

These distinctive red binders not only ensure that your RAINBOWs stay in mint condition, but they showcase your collection as well. Each binder is clearly embossed with the magazine's name in gold lettering on both the front and the spine. They're a handsome addition to any room.

They also make it possible for you to organize your work space and eliminate the clutter on a permanent basis. You'll spend more time on your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two handsome binders, which hold a full 12 issues of THE RAINBOW, is only $13.50 (please add $2.50 for shipping and handling).

Special Discounts On Past Issues With This Offer

To help you complete your collection of THE RAINBOW, we're offering a special discount on past issues with the purchase of one or more sets of binders.

When you place an order for six or more back issues of THE RAINBOW at the same time you order your binders, you are entitled to $1 off each magazine, which normally sells for the single issue cover price. For an order form, please refer to our "Back Issue Information" page (check Table of Contents under departmental listings). Also with this offer, copies of the "Official And Compleat Index To THE RAINBOW" (a comprehensive index of RAINBOW's first three years, July 1981 through June 1984), usually priced at $2.50, may be purchased for only $1 with a set of binders.

Due to heavy demand, we suggest you order back issues now while supplies last.

_____ **YES**. Please send me _____ set(s) of RAINBOW binders at $13.50 per two-binder set (plus $2.50 per set for shipping and handling). If your order is to be sent via U.S. Mail to a post office box or to another country, please add $2. Kentucky residents add 5% sales tax. **U.S. currency *only*, please.**

Order one or more sets of binders and take advantage of these exciting offers:

_____ I also want to take advantage of a special savings of $1 off the single issue cover price for back issues with the purchase of a set of binders. (Minimum order of 6 magazines. An order form from a recent issue indicating the back issues you wish to receive should accompany this order.)

_____ I want to purchase the first three-year index to THE RAINBOW (July 1981 through June 1984) at the special price of $1 (regular price $2.50) with my purchase of one or more sets of binders.

Name _____
Address _____
City _____ State _____ ZIP _____
☐ My check in the amount of _____ is enclosed. (In order to hold down costs, we do not bill.)

Mail to. **Rainbow Binders, The Falsoft Building, Prospect, KY 40059.**

To order by phone (*credit card orders only*) call 800-847-0309, 8 a.m. to 5 p.m. EST.
For other inquiries call 502-228-4492.

chived polls, go to the Topics section of the SIG. Jim archives older polls to allow users to create even more polls. Only 20 polls can be active at any given time. To vote on an active poll, type POLL from the CoCo SIG prompt.

Jim has also been quite busy answering Mail and Forum messages, as well as weeding out older Forum messages that no longer have any information value. It appears we have found a quick way to correspond with other CoCo enthusiasts. For the newcomers to the CoCo SIG, we ask that certain guidelines be followed in sending messages. Questions and suggestions involving normal SIG operation should be sent to Jim Reed or me. This can be in either the Forum or via Mail, although we would like to see them in the Forum to keep them public. Questions about the database should be referred to **Marty Goodman** (MARTYGOODMAN) or **Steve Bjork** (6809ER). Any questions about the production of the RAINBOW should be sent to EDITORS and those concerning subscriptions should be sent to ORDERS. Any messages sent to EDITORS or ORDERS should be sent via the Mail section only, since they are not of general interest.

Free SIG Time!

We are pleased to announce the opening of a new section on our CoCo SIG. The section is titled Questions & Feedback and is accessible from the main CoCo SIG menu. Selections offered in this new section include Feedback to Sig Staff, Order RAINBOWfest Tickets, Request for Free Upload Time and Trouble Report.

The intent of the new section is to provide a quick method of obtaining help or services. To use this new feature just type QUE at the main CoCo SIG prompt. You will be presented with the menu of choices. Type the first three characters of the appropriate choice and then type READ. You will then be allowed to fill out a "form" that is simpler than typing your name. Just follow the prompts.

To Jim Reed goes a big chunk from that pot-o'-gold for all his perseverance (and late nights) working on getting this much-welcomed addition in operation!

Next Month

Next time I hope to continue our discussion of the database. Emphasis will be placed on uploading of files to our CoCo SIG.

ics world. Paul Normand has given us a curious *CHAIR-R-Us* program, and **Roger Bouchard** (HARBIE) has uploaded some striking animal images: in particular, a wildcat picture worth downloading and examining.

Ira Goldwyn (IRAG) recently arrived on the SIG with an immense number of graphics images. Most of these are cartoons or enhanced digitized pictures. His *Famous Faces* group includes W.C. Fields, Groucho Marx, Mr. Spock and (my favorite) Alfred E. Neuman. His *Looney Tunes* group includes Speedy, Tweety, Coyote, Elmer, Daffy and others of our friends. His cross-eyed *Mona Lisa* is an amusing bit of digitizer vandalism. I expect we'll be seeing more of Ira's material over the next few months.

In the Product News section I have uploaded a 15K piece that describes nearly all I know [Editor's exclamation!] about 80-column cards for the CoCo. This is an exhaustive comparative review of all four 80-column cards made for the CoCo, with material for the novice and dedicated hardware hacker alike. This review has already been more popular in terms of download count in its first two weeks of existence than most other reviews that have been there for months I also have uploaded a comprehensive review of the new Tandy Modem Pak for the CoCo.

In the OS-9 database **Kent Florian** (DALEK) has given us the *Dolphin Editor*, a screen editor written in C. **Denny Skala** (DENNYSKALA) has provided a patch for function keys for Version 1.0 and Version 2.0. He has also given us an OS-9 driver for the J&R Banker 256, 512K RAM upgrade. **Allan H. Smith** (LUTHER) has given us a driver for the Tandy Speech Sound Pak. (There are versions of this driver for both OS-9 Version 1.0 and Version 2.0.)

We have a number of new games. Paul Normand has provided us with three new entries: *Egyptian, Birdcreatures* and *Dicegame*. The first two are "U-Zap-Em" sorts of games. Steve Macri has given us *Drag.BAS*, a drag race game. Finally, one of the authors of *Graphicom* and *WEFAX* decided to doodle with his FORTH system, and, as a little exercise, whipped out a simple version of that classic computer game *Lunar Lander*. This is in compiled FORTH (it is downloaded and executed like any other binary program) and features very smooth graphics. A word of caution: This file is 27K long!

In the Music topic area, **Ken Bragg** (KILRCOCO) has submitted the first new music file we have seen in ages! The submission, *Open Arms*, is a darn good one.

The CoCo SIG staff heartily thanks all members for their contributions to the database.

A Look Back and a Look Forward

Our database has been steadily growing. The largest growth has been in the Graphics section, with the Utilities section close behind. Ira Goldwyn, a long-term CoCo BBS user, has amassed an immense library of Color Computer art, consisting of original art, cartoons and digitized pictures. He has contributed heavily to our Graphics database. Ira says he has over 2,000 CoCo art files in his library. I expect we'll be seeing quite a bit more from him. Soon, we expect to have the RAINBOW's "CoCo Gallery" pictures in the Graphics section, available to members without surcharge.

The labors of our new OS-9 section leader, Steve Bjork, are beginning to be felt in the OS-9 database. OS-9 files are now promptly enabled. Steve has worked closely with some of the more recent contributors to improve their files. Arrangements are now in progress for software from the OS-9 users group to start appearing in our OS-9 library. And the "KISSable OS-9" program files from RAINBOW will soon be available in the OS-9 Data Library section, though accessing those "KISSable OS-9" files will incur a $3.50 surcharge, as is the case with regular RAINBOW ON TAPE material. Members will be alerted to this by a dollar sign ($) in the filename.

Soon, I hope to find time to upload all of the *WEFAX* program material I have in my personal library, including a dozen or more graphics files of the documentation for *WEFAX*, hand-drawn by the authors of *WEFAX* and *Graphicom*. Coming from these same folks will be an RTTY program to allow amateur radio operators to receive and transmit RTTY signals using the CoCo, and a Morse Code practice program that incorporates all of the latest ideas about how to properly learn the code and improve speed. **Don Hutchison** (DONHUTCHISON) will soon be uploading some useful schematics and associated documentation for simple, rugged disk drive power supplies to the Hardware Hacking section. He and I have been working on these for the last few weeks, collaborating via Delphi Mail. I may also have time to upload some more font sets for *Graphicom*. I plan to write some new product reviews, including a comparison of all available 256K RAM disk upgrades for the CoCo, and a comprehensive product review of the new DS 69A video digitizer from Microworks, which is a most impressive product.

— Marty
(MARTYGOODMAN)
Delphi CoCo SIG Database Manager

Once you are in the file room and in ont of the appropriate file cabinet, irt opening the drawers to see what's ere. Just type DIR to get a directory the various groups. Make sure to jot wn any items you may want to download. When the directory has finished se CONTROL-'O' to abort the output), pe READ XXXX where "XXXX" is the me of the group of files you want to e. You *must* READ a group before you n download it.

What you should see now is a slew of formation about the group, such as e size, who submitted the files, what e files do and a list of the files in that oup. The last thing to appear on the reen is the ACTION> prompt. This is elphi's way of saying you can download or list the file now. If you press NTER at this prompt, the information bout the next group in the directory is nt to your screen.

eady to Download

To initiate an XMODEM download, pe XM. You are prompted with:

```
ype three consecutive <Control-
>'s to abort.
K, receive! (text)
```

In this case, the file is an ASCII file s indicated by "text" in the above xample. If the file is binary, "text" is eplaced by "blocked." At this point nitiate XMODEM receive on your erminal program. On *Mikeyterm*, this s done by using CONTROL-'4'.

The file should begin transfer into our computer. When transfer is comlete, your terminal program prompts ou. Save the file to tape or disk. It is vise to look at the contents of the buffer irst. If you can read each character in he buffer, the file should be saved as an ASCII file. If, however, the buffer contains what appears to be graphics characters and other "garbage," the file s in binary (not necessarily machine-anguage) and should be saved accordngly.

To initiate an ASCII download, type DOW at the ACTION> prompt. Delphi esponds with:

```
Ready... Press RETURN to begin:
```

At this point, open the buffer on your communications software and press RETURN. As the file is transferred, you will see its contents scroll down the screen. Since binary files cannot be transferred in this manner, remember to save the file to tape or disk in ASCII.

Final Notes on Downloading

That's all there is to it! Once the file is saved, simply return to the communications mode and continue having fun. If the group from which you downloaded contains more than one file, you will probably want to get others, too. When you return to communications, Delphi will still be just "sitting" there. If you press ENTER, Delphi responds by starting a transfer of the next file in the group. If the group only contained one file, when you press ENTER, Delphi responds by sending the information for the next directory group to the screen. This is handy for downloading several consecutive files and groups.

If there is more than one file in a particular group, you don't have to download them all. If you only want to download the third file listed in the group, for example, just type XM 3 or DOW 3 accordingly at the ACTION> prompt.

To return to the database prompt for the database you are in, use CONTROL-'Z'. To change to a different topic area, type SET XXX where "XXX" is the first three letters of the database area you want.

If you have further questions, please direct them to Marty Goodman or me in Forum so that others may learn as well.

On Other Items

Database Report

By Marty Goodman

In May, I uploaded a file to the General topic area describing the tragic loss of a GOES weather satellite because of a malfunction in its Delta booster rocket. Also present is a file on how to use DOT commands in messages to make them appear on the forum nicely formatted.

Steve Bjork (6809ER) has contributed a random number generator in assembly language source code to our Source For 6809 Assemblers topic area. Steve, one of the best known CoCo games programmers has, over the last year, been producing a lot of code he has been placing in the public domain. His excellent *Mouse* utilities have been appearing in the pages of RAINBOW over the last couple of months. I have uploaded to the Source For 6809 Assemblers area the source code file for the *MS19SET* format program that allows a CoCo to format MS-DOS type disks. This code is highly commented, and while written to create a single-sided MS-DOS disk, can easily be modified to generate double-sided MS-DOS format. **Art Flexser** (ARTFLEXSER), author of *ADOS* and *Peeper*, has continued to upload more of his tutorials to the Source code section. Among them is a tutorial on how to program the PIAs of the CoCo to read the keyboard and an introduction to ML sorting.

Our Utilities section has been expanding with new files from many members **Mark Kowit** (TOBOR8) has uploaded *Real Estate Management and Evaluation* programs. **Jim Manning** (JIMBM) has uploaded a *Homebudget* program, and **Bill Lippert** (BEERBELLY) has given us a delete disk file utility. **Milton Webb** (MILTWEBB) contributed a disk utility program, and **Paul Normand** (PAULNORMAND) has provided a program for cataloging video tapes (*BETA.BAS*). **Chris Bergerson** (CHRISB) donated a *Disk Label Maker* utility.

In the Hardware Hacking topic area Steve Bjork has uploaded a utility for checking out the memory in a DISTO RAM Disk card. I've uploaded an article on how to upgrade all models of CoCo 2, and one discussing the use (and abuse) of high speed pokes on the CoCo. I also have uploaded a technical file for owners of the J&R Banker on how to fix the hardware so you'll never have to disable the unit to run any CoCo program. This hardware fix cures the unit's problem of not working with programs that talk to the SAM using CLR instructions. Finally, I have uploaded some alternate fonts for burning into 2716-1 EPROMs to improve the appearance of the character set of the PBJ *Wordpak-RS*. Included are utilities to create your own fonts.

In the Graphics database, there is a staggering number of new and lovely uploads **Stephan Macri** (DRACMAN) has given us a utility to convert the output of the C64 Doodle converter into *CoCo Max* file format. Mark Kowitt has provided us with a beautiful enhanced digitized image from the movie *The Color Purple*: a striking silhouette of Celie. Mark has also given us a whole group of digitized faces entitled *Strange Faces*, which further establishes digitized images as a true art form. **Keith W. Smith** (UGLY) has provided us with a poster showing some of *Murphy's Laws*, and **Loren J. Howell** (XENOS) has given us a CGP-115 dump program. Loren has also uploaded two pictures of butterflies, one of a Monarch and one of a Cyrus Morphus. I am impressed with the detail and accuracy of these images, and with their sheer beauty. Loren appears to be a budding Audubon of the CoCo graph-

Using the CoCo SIG

By Cray Augsbur
Rainbow's CoCo SIGo
User Name: RAINBOWMA

Let's take a trek into the workings of the database on the CoCo SIG, and while we're on this voyage, we'll look in detail at how to download and upload files while on Delphi. However, we first need to become more familiar with the fundamentals.

File Formats

A file is a group of related characters and symbols. Generally the term "file" refers to a program, an article or a set of data. There are two different formats for the storage of information in files: ASCII and binary. Binary files are sometimes referred to as compressed or tokenized. An ASCII file contains readable characters, while a binary file contains characters that represent the zeroes and ones the computer works with.

ASCII is the preferred format for text files or articles. It is sometimes best to store BASIC programs in the ASCII format. Incidentally, we request all BASIC files for uploading be stored in ASCII. Binary is used for the storage of tokenized BASIC files, machine language programs, graphics and music files. Infrequently, text files are stored in binary format.

File Transfers

There are two distinct methods of uploading and downloading files. These are the ASCII transfer method and XMODEM transfer. While the ASCII transfer can only be used to transfer ASCII files, XMODEM can be used to transfer both ASCII and binary files.

Cray Augsburg is RAINBOW's technical assistant and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is RAINBOWMAG.

ASCII transfer is simply the transmission or reception of a character-by-character image of a file. Since the ASCII code uses only the lowest-order seven bits of each byte, control codes and other special information (binary code) cannot be transmitted in this way. ASCII transfer involves no automatic error detection, so it is frequently unreliable for the transfer of information.

The XMODEM protocol transfers complete bytes and, therefore, allows the transfer of binary information and control codes. When a file is being transferred via XMODEM from a host computer to a remote computer, the information is sent in groups (blocks) of 128 bytes rather than a continuous stream. This allows for error detection in the transfer.

Once a block is transferred, the host computes a checksum value based on the information contained in the block. The remote computer also does this, and sends the value back to the host. The host compares the computed values and, if they are the same, transfers the next block in the file. If the values do not match, the host knows the sent block was not correct and resends the block. Most XMODEM terminal programs allow the host to send a correct block up to 10 times, if necessary. This allows for the transfer of error-free ASCII or binary files. It is for these reasons we suggest you use a terminal program that includes XMODEM capability. If you do not have access to one, you can download *Mikeyterm* from the data communications database via ASCII transfer. *Mikeyterm* is an easy-to-use XMODEM terminal program that supports several system configurations including tape-based systems.

Database Organization

The CoCo SIG database can be viewed as a room full of file cabine There are 16 file cabinets; one for ea topic area of the database. Each cabir contains several drawers (we call the groups on Delphi.) Each drawer c have one or more folders (files, programs) in it.

Type DAT to get the database for t CoCo SIG. You will see a TOPIC prompt; enter the name of the topic ar you want to peruse (see Table 1.) R member, Delphi allows you to enter t first few unique characters in place the entire name. A shorter method is include the topic name on the commar line with DAT. For instance, at the CoC SIG prompt type DAT GAM to enter tl games database.

Table 1

Topic Areas of the CoCo SIG Database

1) General Information
2) Info on RAINBOW
3) BASIC Programming
4) OS-9
5) Source For 6809 Assemblers
6) Help
7) Utilities & Applications
8) Product Reviews & Announcements
9) Hardware Hacking
10) RAINBOW ON TAPE
11) Games
12) Data Communications
13) Graphics
14) Managers Only*
15) Music & Sound
16) Preview*

* These areas are accessible only by SIG staff. Managers Only is used for the storage of suggestions by the staff. Preview is the area where new submissions wait before they are moved into the public areas.

PRINTERS!!!

NEW! Star Micronics NX-10	$295
Okidata 192 (Parallel)	$370
Okidata 192 (Serial)	$425
Okidata 182	$240
Silver Reed 550 (Daisy Wheel)	$395
Silver Reed 400 (Daisy Wheel)(Parallel or Serial)	$200

Other Printers, Monitors and Accessories for CoCo and IBM upon request.
$5 off interface with purchase of printer
Find your cheapest published price and we'll beat it!!

SP-2 INTERFACE for EPSON PRINTERS:

- 300-19,200 BAUD rates
- Fits inside printer — No AC Plugs
- Optional external switch ($5.00 extra) frees parallel port for use with other computers
- $49.95 (plus $3.00 shipping)

SP-3 INTERFACE for MOST OTHER PRINTERS:

- 300-19,200 BAUD rates
- External to printer — No AC Plugs
- Built in modem/printer switch - no need for Y-cables or plugging/unplugging cables
- $64.95 (plus $3.00 shipping)

Both also available for IBM, RS-232 and Apple IIC computers

DISK DRIVE SYSTEMS

ALL ½ HEIGHT DOUBLE SIDED

Drive 0 (addressed as 2 drives!)	$235
Drive 0,1 (addressed as 4 drives!)	$350

All above complete with HDS controller, cable, & drive in case with power supply

Bare Double Sided Drives	$109
Dual ½ Height Case w/Power Supply	$49
Double Sided Adapter	$25
HDS Controller, RS ROM & Instructions	$99
25 CDC DS/DD Diskettes	$32 & $3 s/h

We use the HDS controller exclusively. Can use 2 different DOS ROM's.
Shipping Costs: $5/drive or power supply, $10 max.
CoCo Serial Cables 15 ft —$10. CoCo/RS-232 Cables 15 ft —$20.
Other cables on request. (Add $3.00 shipping)

Robotize Your Co Co with EMC

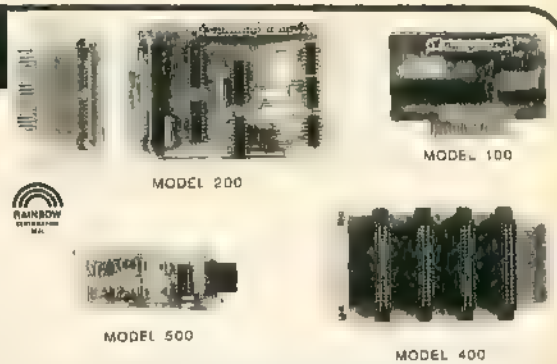
Our unique expansion hardware enables you to create a versatile automated control system. All EMC boards come fully assembled and computer tested.

Model 100 Parallel Port (PIA) — $53.85
Features: Two 8 Bit Bi-Directional Ports, 4 Control Lines, Sample Software Provided

Model 200 Buss Driver — $83.75
Features. TTL, Fanout of 10, 2 Card Slots and Flexible Ribbon Buss Provided. Additional Connectors Available.

Model 400 Mother Board — $54.75
Features 4 Slots, 5 Gold Pin Connectors, PC Board, for all Addr Decoded Boards.

Model 500 Motor Control Amp — $43.70
Features. TTL Compatable, LED Direction Indicators, Drives DC Motors 500 MA Max at 12 VDC.



Purchases Add $3.00 Shipping & Handling with Check • Shipping is FREE with Money Orders • Flor da residents add 5% sales tax • Send for FREE Brochure • For Information Call (813) 896-8295

ADOS ENHANCED, EPROM-ABLE DISK BASIC

Now you can supercharge Basic with an impressive array of extra features WITHOUT sacrificing compatibility. ADOS is compatible with virtually 100% of commercial software. Customizing utilities are provided to allow user-defined command abbreviations, baud rate, separate tracks per disk (35 or 40), support of double sided drives and more. After customizing ADOS you can have it burned into an EPROM that plugs into the Disk Basic ROM socket or just use it in RAM as a 64K disk utility. EPROM + burning will cost about $20 we provide information concerning how you can have this done. Features include • repeat and edit of the last direct mode command • 26 definable control-key abbreviations • automatic line number prompts • DOS command • lowercase command entry (all the commands of a powerful but PBJ WordPak • COPY (rename) of drive number • AE error override option • RAM command (64K) • RUNM command • text echoing to printer • ML monitor • text file scan • enhanced directory • error trapping • and less text utility included. 42, 51 or 64 characters per line.

"I COULD NOT FIND ANY SOFTWARE THAT WOULD NOT RUN UNDER ADOS." THE RAINBOW December 1984

"I LOVE ADOS! A GENUINELY FIRST RATE PRODUCT." Color Micro Journal February 1985

"I WON'T PART WITH MY ADOS EPROM FOR ANYTHING NO COMPATIBILITY PROBLEMS." Hot CoCo, May 1985

Disk $27.95

THE PEEPER ML PROGRAM TRACER

Monitor machine language programs AS THEY ARE RUNNING. Peeper actually timeshares with the target program, giving FULL CONTROL as ML programs run. Switch instantly between watching regular program output and Peeper's trace of registers and stack on screen or printer, inspect memory in any of 26 display modes. Execution speed can be varied from full speed to the barest crawl or halted entirely as programs run. Single stepping, breakpoints, memory or register examine/change. Relocatable, supports 64K use (16K required). See February '85 review.

Disk $23.95 Tape $21.95 Assembler source listing Add 3.00

FASTAPE THE NEXT BEST THING TO A DISK DRIVE

Fastape allows cassette I/O at 3000 baud, TWICE NORMAL SPEED. Uses the high speed POKE 65495,0 mode and makes it convenient to stay in this mode throughout. Features automatic adjustment of cassette and printer parameters when speed mode is changed. Control-key functions for many Basic commands and for changing speed modes. Compatible with all file types and can be used with Talawriter 64 and many other tape utilities. (16K required) See July '85 review.

SUNRISE, FL 33322

must enter the correct digit number to get a correct response. Keep in mind that the number entered must not have any commas in it. After a response has been given, you may press '@' for the score, but not during the input part. Otherwise, the '@' symbol is interpreted as an incorrect response.

When you finally go to the score card, either press 'C' to continue, 'Y' to run the program again, or 'N' to end the program.

The program should fit easily into a 16K CoCo, but if you have any doubts, PCLEAR1 first. You could also include the speed-up POKE as one of the lines, but quite honestly, the program runs rapidly enough as it is.

A Few Words About Title Maker

I have gotten letters from a few people who have had difficulty with the CoCo *Title Maker* from several months ago. While I don't have the time for individual replies, this should cover most of the concerns.

First, some have written and asked if there were any mistakes in the listing. No, the listing is without error. Some of you may have made typing errors when keying it in. When in doubt, subscribe to RAINBOW ON TAPE.

Some have said they get a ?DS error when trying to reload the BASIC program created by *Title Maker*. This happens only if you have left out a semicolon somewhere in the original listing. Recheck your typing. If that doesn't work, you could always load the new BASIC program into a word processor like *Color Scripsit*. First try loading the program into BASIC. If you get the ?DS error, it means you have a direct statement without a line number. List what has loaded to see in what line the problem appears. Then load the BASIC program into the word processor, and remerge the lines where this error occurs. Save the result and then relo into BASIC.

Others say they have gotten the ?F error when trying to load the new BAS program from disk. This only happe if you analyze the screen and then sa the screen to disk in machine languag What happens is that the machi language screen is saved with a /B extension. Use RENAME to give th machine language listing a /BIN exte sion, reload it into the *Title Maker*, ar then analyze it to disk. This should sol this very rare quirk.

As a rule of thumb, it is better to sa first, and then analyze second.

Conclusion

I hope this fourth installment in th Life Skills series proves valuable to yo whether you are a teacher or hav youngsters in the family. Keep thinkin up those ideas, and I'll see what I ca come up with. See you next month. [

Sugar Software

The CoCo Calligrapher

Use your CoCo, your 8-bit dot addressable graphics printer and the **CoCo Calligrapher** to create beautiful signs, invitations, flyers, greeting cards, diplomas, certificates, awards and love letters.

The original **Calligrapher** letters are 36 points (1/2 inch) high and variably spaced. It includes an easy-to-use, menu-oriented program and these three typestyles:

Old English

Old English

Cartoon

Cartoon

Gay Nineties

Gay Nineties

The CoCo Calligrapher requires 32K ECB.

Tape $24.95/Disk $29.95

ADDITIONAL TYPESTYLES

These tapes of additional typestyles are available for **$19.95 each.** They can be easily moved to disk. ***The original Calligrapher program is required.***

Tape 1 - Reduced, Reversed, and Reduced-Reversed versions

Old English **Gay Nineties** **Cartoon**

All typestyles on Tapes 2, 3, 4, 5, and 6 include Standard (1/2 inch), Reversed, Reduced, and Reduced-Reversed unless otherwise noted

Tape 2: Broadway/Old Style

Broadway Oldstyle

Tape 3: Business/Antique

Business Antique

*These disks of additional typestyles are available for **$49.95** each.*

Disk 1 - all type styles on Tapes 1, 2 and 3.

Disk 2 - all type styles on Tapes 4, 5 and 6.

Tape 4: Wild West/Checkers

Wild West Checkers

Tape 5: Star **Hebrew**

Stars שלום

Victorian (Standard and Reverse only)

Victorian

Tape 6: Block/Computer

Block

COMPUTER

The OS-9 Calligrapher

$39.95

Requires OS-9 Version 01.01.00 and a dot matrix printer. **The OS-9 Calligrapher** reads a standard input text file which contains text and formatting directives to produce standard utput for printer or disk. You can specify which font to use; centering; left, right or full justification; line fill; narrow mode; margin; line width; page size; page break and indentation.

*These disks of additional typestyles are available for **$49.95** each.* They are not compatible with the **CoCo Calligrapher** typestyles or program. OS-9 typestyle disk must be used with the **OS-9 Calligrapher.**

Disk 1 - OS-9 version of all type styles on Tapes 1, 2 and 3.

Disk 2 - OS-9 version of all type styles on Tapes 4, 5 and 6.

level of the material if the work presented is either too easy or too difficult for the user.

To make this program more adaptable, I have limited the BASIC keywords to only those found in 16K Color BASIC. I have also intentionally left out any keywords which are not found in the MC-10 Color BASIC language such as ELSE or STRING$. MC-10 users should change the value in Line 235 (235 K=RND(-TIMER)) to 235 K=RND(-9999) or some other number. You may want to insert this value in the middle of Line 185, too, if you want to make the program truly random on the MC-10.

The first task I encountered in creating this program was to write an algorithm (set of program commands) to take a number and translate it to its written form. This requires storing the names of the numbers in string arrays and combining them to create the correct written equivalent.

Naturally, we can't store all the possible written numbers; our program would be gigantic. We want to store only those root parts to be combined as needed. For example, we don't save a string as sixty-three but combine the strings for sixty and three to form our answer. Therefore, the DATA statements contain all our possible written roots.

The next trick is to devise a way to create multiple-choice answers for a randomly generated number. However, since we need to deal with our numbers in their string form, a strange bug in BASIC caused me many hours of head scratching. It seems that every now and then, if we are dealing with STR$ and the VAL(X$) commands, BASIC decides to add a useless decimal tail to our number. Therefore, our string number of 23.56 may end up appearing as the mutant form 23.560001 when displayed on the screen. This causes great confusion to our user, so I had to find a way to chop off this tail whenever it appears.

After some trial and error, I was able to come across a set of lines to do just that. You may notice that the commands to create and analyze the numbers and strings are longer than necessary and may cover circumstances which our random numbers may not require. This was necessary in order to make the algorithm work.

These lines soon expanded into a full-blown program of 170 program lines. Funny how a simple idea can be expanded to such a degree. These are the steps we must take, however, in order to cover all the circumstances we want our program to deal with.

The earliest version of this listing incorporated this CPL concept only if the student checked his progress. Since my recent programs have allowed the user to check progress, then continue, I have found many students will check their progress every two minutes. I felt this would be a way to discourage that practice by having the difficulty level increase if the score was above 95 percent, or decrease if it was lower than 70 percent.

This did not prove suitable in cases where the student did not check the progress by pushing the '@' key. Therefore I included a routine to check the progress, without displaying it, every ten problems. If you want to change the minimum and maximum scores which trigger the change, alter the values of 70 and 95 in lines 795 and 805. The variable 'MS' stands for the Math Score for the program at that point.

The result of these line changes is that the student can be using the program, reviewing the material, and the program will vary the skill level to match the student's ability. Thus, if a student is left on autopilot, (which I do not advise), there is less likelihood of wasting time on unsuitable material.

If our program generates a number to be identified and has to create multiple choice answers, it usually generates them by moving the decimal place to the left or right. Some students noticed a pattern in my earliest version so I later included commands to break this pattern. Therefore, if a zero appears in the tenths place, one of the multiple choice answers will extract the zero. This allows us a truly random creation of multiple choice responses. This extraction occurs in about half of our cases.

One option I have avoided is having the user enter a written number to match a number in digits. This would cause great confusion as the user might include an extra space or misspell one of the root words. For example, if an answer is one hundred and twenty-on hundreths, but was entered as one hundred and twenty one hundreths, would be marked as incorrect. This onl frustrates our student.

Recently I was presenting some of m earlier educational programs to a grou of teachers in a private school when on of them expressed concern over m program's use of the word Wrong whe an incorrect answer was used. Sh asked, "Couldn't you say Sorry instea of Wrong? Wrong sounds so negative. Therefore, I have started using Sorr when an incorrect answer is entered.

"The program will vary the skill level to match the student's ability."

Using the Program

On running the program, our Lif Skills title card appears. I have tried t use a different color scheme with eac one. You are asked to select a skill leve from one to five with one being th easiest level. If a higher level is selected it continues to select problems from ar easier level as well in order to allow fo greater variety of selections.

Your next choice is digit or written

Choosing 'W' displays a number tha must be idenitified from the two choices listed below it. For example:

```
HOW WOJLD YOU WRITE OJT THE
FOLLOWING DIGIT ?
    72.41
A) SEVENTY TWO AND FORTY ONE
THOUSANDTHS
B) SEVENTY TWO AND FORTY ONE
HUNDRETHS
```

The user must press either 'A' or 'B' to respond. Pressing '@' gives the user a score card.

If 'D' is selected for digit, then there are two possible choices, either select or input.

The Select mode offers multiple choice digit answers to a written number. There may be anywhere from two to five multiple choice responses displayed, depending on the difficulty of the material. Pressing '@' gives the score card.

If you choose the Input mode, then a written number is displayed. The user

Computer-Paced Learning

By Fred Scerbo
Rainbow Contributing Editor

Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget that this is BASIC. All programs resulting from your wishes are for your use but remain the property of the author.

As time passes, and more and more programs are written for our Tandy computers, software authors discover new uses for the BASIC language burned into the chips of our machine's ROM. This month's "Wishing Well" offering is no exception as we will introduce a new concept to our pages: CPL or Computer Paced Learning. This is done with our fourth Life Skills program titled *Written Numbers*.

The Wish: What is CPL?

More classrooms now have computer terminals in them. Teachers across the country have purchased millions of dollars of software and have quite often been cheated out of their school district's limited financial resources. There have been two very serious drawbacks to this development.

First, some school districts have joined in a game of one-upmanship by comparing expenditures on computers and software as if they were comparing new cars. This type of attitude can have a very negative impact on the goals of any computer program. What is needed is software geared to specific needs.

The second error that occurs is the tendency to put students on "autopilot" once appropriate software is found. Some students will gladly work on a program covering material too easy for their ability. Unless the student's level and progress are closely monitored, the student will drift off, running like a plane on autopilot, oblivious to all real learning.

Since we have a CPU (Central Processing Unit) in our machine capable of executing any logical command set given it, we can develop, with a little care, software which just might help us deal with these two problems. That's where the concept of CPL or Computer Paced Learning comes in. Our goal is to have our software actually monitor the student's progress during the running of the program and make adjustments in skill level based on that student's performance.

The Program: *Written Numbers*

Our first Life Skills program was a simulation that dealt with money handling skills and subtraction. Our second program was *Number Evaluation* in which the place value of numbers was examined. Program three dealt with *Ruler Reading Skills*. In *Written Numbers*, however, we return to the math skills originally introduced in *Number Evaluation*. Rather than identify the place in a number as was done in that program, this time we want to evaluate a number such as 55,697.25 and translate it to its written form of fifty-five thousand six hundred ninety-seven and twenty-five hundreths.

The first requirement of the program is that it have a variable skill level which can be selected from a menu. Next, it must deal with an evaluation of the numbers in both written and digit form. Third, it must allow for periodic checking of student score and progress. Finally, it must adjust the difficulty

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.

HI-RES II SCREEN COMMANDER

Are you tired of looking at the 16 line by 32 character display on your CoCo? Do you wish you could see more lines and characters? Then HI-RES II is the answer, it can give you the big screen display you've always wanted. It will display 24 lines of 32, 42, 51, 64 and even 85 true upper and lower case characters per line without any hardware modifications.

HI-RES II is the most powerful screen enhancement package available for the Color Computer, yet it is the least expensive. It is completely compatible and transparent to Basic. Once the program is loaded, everything works the same as before, only you have a much better display to work with. It even allows you to have mixed text and Hi-resolution graphics on the same screen or have separate text and graphics screens. It also has an adjustable automatic key repeat feature and allows you to protect up to 23 lines on the screen. HI-RES II features over 30 special control code functions that allow you to change characters per line, protect display lines, change background color, position cursor, switch normal/reverse video, underline, double size characters, erase line/screen/to end of screen, home cursor, character highlight and much more. It works on all models of the CoCo with 16, 32 or 64K and provides automatic reset control so HI-RES II won't disappear when you press reset

Only $24.95 for Tape and $29.95 for Disk

EDT/ASM 64D

64K DISK EDITOR ASSEMBLER w/DEBUG

EDT/ASM 64D is a Disk based co-resident Text Editor & Assembler. It has a Hi-Resolution 51, 64 or 85 column by 24 line display, so you see your program listings easily. It also supports the PBJ 80 Column Word-Pak cards The disk also contains a free standing Machine Language Debug Monitor, to help you debug your assembled programs.

The Editor in EDT/ASM 64D is the most powerfull, easy to use Text Editor available in any Editor/Assembler package for the Color Computer. It even has automatic line number generation for easy entry of program material. Some of it's features include.

- Local and Global string search and/or replace.
- Full screen line editing with immediate line update
- Easy to use Single keystroke editing commands.
- Load & Save standard ASCII formatted Tape/Disk files
- Move or Copy single & multiple text lines.
- Create and Edit disk files larger than memory
- Hi-Res Text Display 28 to 85 columns by 24 lines.
- Supports the PBJ 80 Column cards Word-Pak I & II

The Assembler portion of EDT/ASM 64D is the part that creates the Machine Language program. It processes the source file(s) created or edited by the text editor and creates a LOADM or CLOADM binary file on either Disk or Tape. Using library files you can assemble an unlimited size file, using several different disk drives.

- Supports conditional IF/THEN/ELSE assembly
- Supports Disk Library files (include)
- Supports standard motorola assembler directives
- Allows multiple values for FDB & FCB directives.
- Generates listings to Hi-Res text screen or printer
- Assembles directly to disk or tape in LOADM format
- Supports up to 9 open disk files during assembly
- Allows assembly from editor buffer, Disk or both.
- Full description text error messages

DEBUG is a free standing program debugger which provides all the functions supported by most system monitors. Some of them include:

- Examine and change the contents of memory.
- Set and display up to 10 breakpoints in memory
- Remove single or multiple breakpoints.
- Display/Change processor register contents.
- Dump Memory in Hex and ASCII format.
- Fill Memory range with a specified data pattern
- Move a block of memory.
- Search memory range for data pattern
- Disassemble memory into op-code format

Requires 32K and Disk $59.00

"The Source"

Now you can easily Disassemble Color Computer machine language programs directly from disk and generate beautiful, Assembler Source Code for a fraction of the cost of other Disassembler/ Source generator programs. And, the Source has all the features your looking for in a Disassembler.

- Automatic Label generation.
- Allows specifying FCB, FCC and FDB areas.
- Save, Load and Edit FCB, FCC, and FDB map on Disk.
- Disassembles programs directly from Disk
- Output complete Disassembled listing with labels to the Printer, Screen or both
- Generates Assembler compatible source files directly to disk
- Generated source files are in standard ASCII format.
- Built in Hex/ASCII dump/display to locate FCB, FCC and FDB areas in a program
- Built in Disk Directory and Kill file commands.
- Menu display with single key commands for smooth, Easy, almost foolproof operation
- Written in fast machine language, one of the quickest and easiest to use Disassemblers available

Requires 32K and Disk $34.95

TEXTPRO III

"The Advanced Word Processing System"

- 9 Hi-Resolution Display Formats from 28 to 255 columns by 24 lines.
- True Upper and Lower Case display format.
- Three Different Programmable Header lines, re-definable at anytime.
- Programmable Footer line & Automatic Footnote System
- 10 Programmable Tab stops & 7 Tab Function Commands
- Automatic Line Justification, Centering, Flush left and Flush right
- On screen display of underlining and Double size characters
- Change indents, margins, line length, etc. at anytime in a document
- Create and Edit files larger than memory, up to the size of a full disk
- Easily imbed any number of format and control codes for printers
- Automatic Memory sense 16-64K with up to 48K of workspace.
- Typist Friendly line and Command format entry w/ auto key repeat.
- Fully supports the use of 80 column hardware cards

TEXTPRO III is an advanced word processing system designed for speed, flexability and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, then most likely you'll be better off with one of the other word processors. But, if you want a powerful word processing program with extensive document formatting features to handle large documents, term papers, manuals, complex formating problems and letter writing, then TEXTPRO is what your looking for. TEXTPRO works in a totally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formatting information that you imbed directly in your text. There are over 50 different formating commands you can use without ever leaving the text your working on. There are no time comsuming, and often furstrating menu chases, you are in total control at all times. The formatted output can be displayed directly on the screen, showing you exactly what your printed document will look like before a single word is ever printed. This includes margins, headers, footers, page numbers, page breaks, underlining, column formating and full justification.

HOT HARDWARE

UNIVERSAL VIDEO DRIVER

IT'S THE BEST!!! **Great Price! Only $29.95**

Carefully engineered to work with ALL Color Computer models including the newest COCO II. Enables your COCO to operate with a video monitor instead of a television.

- Works with monochrome monitors!
- Works with color monitors!
- Audio Connection included!
- Easy installation— no soldering!

PCX-II COMPUTER

Total IBM compatibility at sensational prices!!!

Complete computer systems starting as low as **$649.00.**
Check our performance and prices.

TANDY 1000 UPGRADES

640K upgrade board with real time clock	$189.95
Serial Interface Board	49.95

The art of entertainment

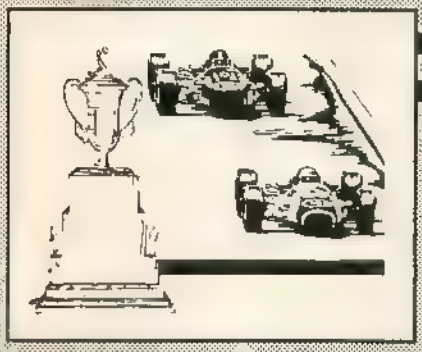
Pinball Factory *by Kary McFadden*

The video game comes full circle in this glorious tribute to the original. Classic pinball spings to life as never before, with fresh new angles that only the computer can offer. Crisp graphics, sound, and fast, smooth action give this machine-language arcade game a realistic, responsive feel you'll hardly believe. There are even "tilt" buttons that let you "bump" the machine!

In addition to playing a great game of pinball, you can enjoy hours of creative pleasure as you design, build, and edit your own screens. Save and load your favorite creations. The joystick-controlled cursor makes it all easy.

Change the board: build with bumpers, tabs, and a multitude of solid obstacles to form any configuration imaginable.
Change the face: draw your own title board with lines, rays, and shape patterns. Add text in three different colors, and two dirrent sizes.
Change the rules: alter the gravity, bounce, and scoring!

64K Color Computer required. $34.95



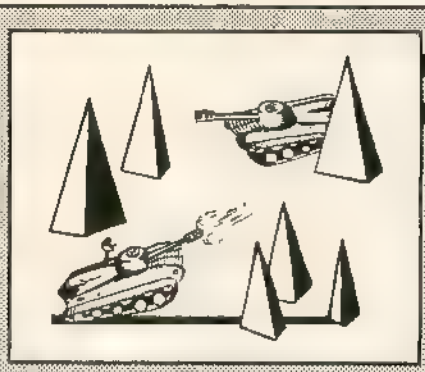
Speed Racer *by Steven Hirsch*

The checkered flag drops as your pulse rises in this lively new arcade game. The road twists to the horizon on the 3-D panorama that sets the stage for the most exciting race the CoCo has ever seen!

Vie for time as you speed through the curves at incredible speeds. Step through the gears to stay ahead of the pack, but step lively since some will stop at nothing to see the end of the race, or the end of you!

Four challenging raceways, complete with obstacles and colorful 3-D scenery, put your skills to the test in this Pole Position™ type game.

32K Color Computer required. $34.95



Rommel 3-D *by Kary McFadden*

You clutch the tank controls, searching for any sign of the enemy. Suddenly a blip appears on radar! Frantically, you move your tank into position. At last you spot the elusive enemy tank! Facing it, you race to lock sights and fire before he does!

Enter the ultimate battle-zone in this exciting 3-D tank combat game. Strategy, speed, and your tank's cannon are your only hope as you wind through a three-dimensional course inhabited by impenetrable barriers and enemy tanks.

Dazzling graphics and lifelike sound take you a step beyond the ordinary in this fast, machine-language arcade game. Enter the next dimension, ROMMEL'S troops are waiting for you!

by the value of the spin multiplied by the number of times the letter appears in the puzzle.

After the final round is played, the computer displays the scores from highest to lowest. If all consonants are shown before the puzzle is solved, the computer asks for the solution to the puzzle. If no one guesses correctly, then it displays SORRY NO WINNERS THIS ROUND and advances to the next round.

Listing 1, *Fortune Wheel*, is the main game. Listing 2 is for creating puzzle and category files for *Fortune Wheel*. When keying in Listing 1 be careful to space it just as it is in the listing. If you don't space correctly, you will get an SN Error. Be sure to type in both listings and save them on disk before using Listing 2 to create the puzzle file. This listing creates direct files and it will write on top of any file or program saved after establishing the puzzle file. This should be a dedicated disk.

This game will only run on a 64K Extended BASIC machine. It uses direct access files so it works only with a disk drive. If you want to use it with a cassette, you need to modify lines 580 through 620.

I have used the speed up and slow down pokes (POKE 65495,0 and POKE 65494,0) in several places in the program. I found that you must use them in lines 580 and 620 because these lines are in the retrieve record routine.

One final note on Listing 1: In the alphabet DATA lines, I have created a data record for the computer to draw every alphabet character (true upper- and lowercase) and all the punctuation characters on the keyboard. So when using Listing 2 to create puzzle and category records, feel free to use lowercase letters and punctuation.

When you load and run the program, a menu appears giving the options to Create Records, Correct Record, List Records and End. When creating records, the computer enters a short word processing routine that allows you to type in a puzzle record up to 64 characters long. Once the record is the way you want it, press ENTER. The Enter Category menu pops up giving the choice of phrase, title, place, person, president and Bible phrase for categories.

If you choose the Correct Record option from the first menu, the computer asks you to enter the number of the record you want and retrieves the record so you can correct it. After all corrections are made, press ENTER and the Enter Category menu pops up again for you to enter the record category.

If you select Option 3 (List Records) the computer asks if you want a hard copy. Next it asks you to ENTER RECORD:START,END. Just enter the number for the first then the last record to be listed. The computer will list the records on the screen and printer.

(You may direct any questions about this program to Mr. Branigan at 105 Briarfield Cove, Jacksonville, AR 72076, 501-982-6067. Please enclose an SASE when writing.) □

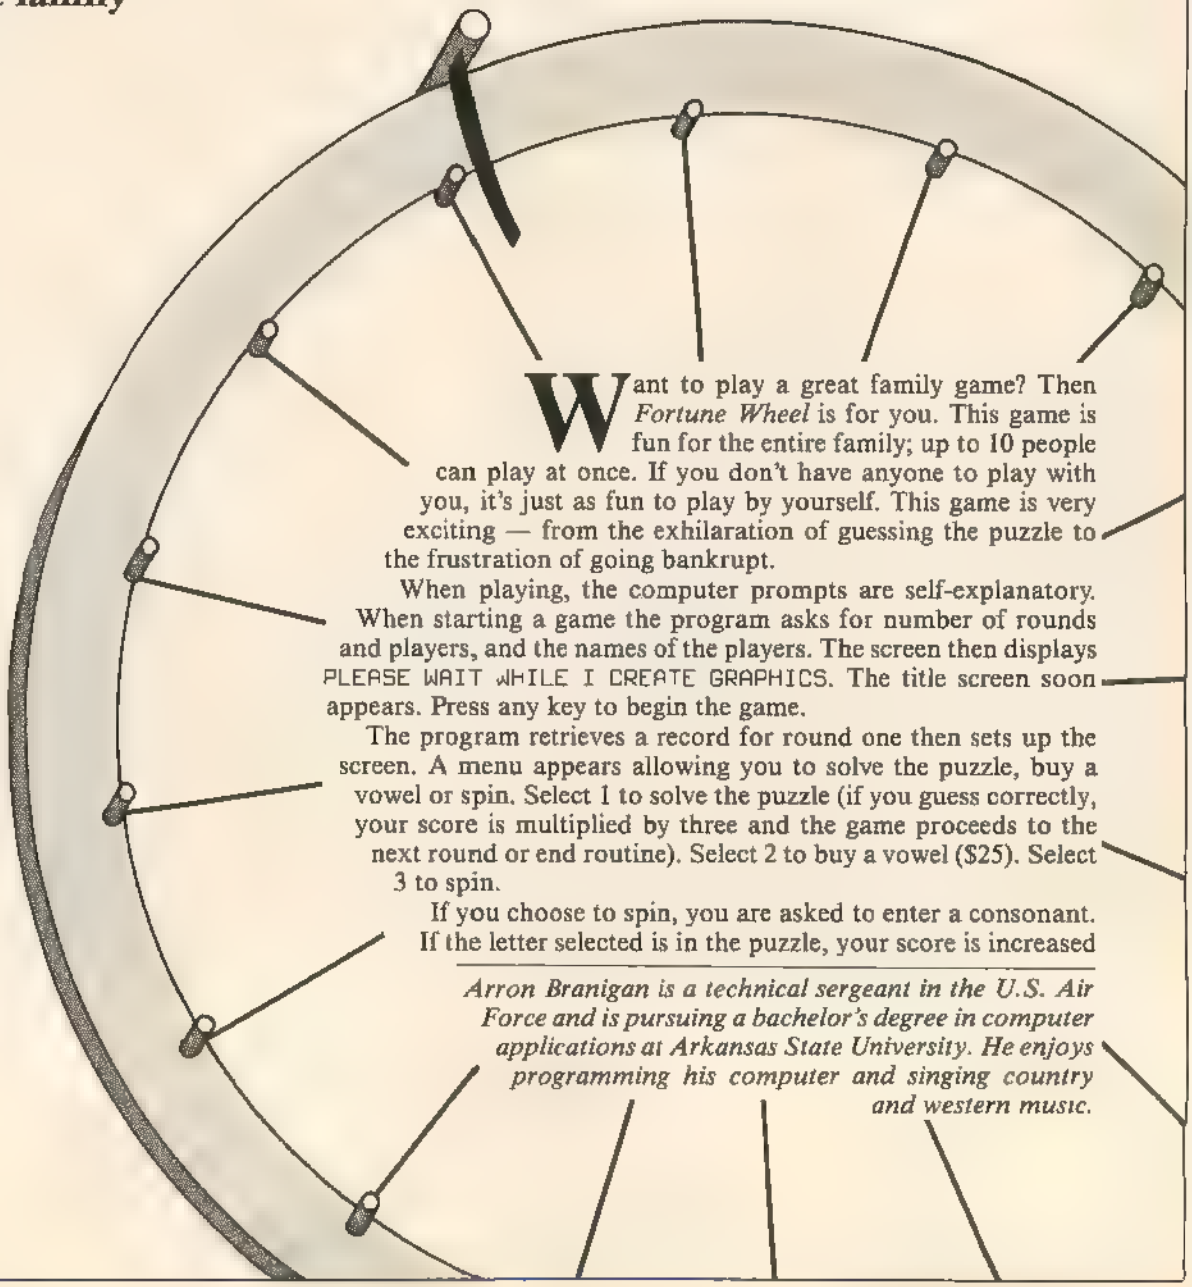
Fortune Wheel

This challenging game provides fun and excitement for the whole family

By Arron W. Branigan



Want to play a great family game? Then *Fortune Wheel* is for you. This game is fun for the entire family; up to 10 people can play at once. If you don't have anyone to play with you, it's just as fun to play by yourself. This game is very exciting — from the exhilaration of guessing the puzzle to the frustration of going bankrupt.

When playing, the computer prompts are self-explanatory. When starting a game the program asks for number of rounds and players, and the names of the players. The screen then displays PLEASE WAIT WHILE I CREATE GRAPHICS. The title screen soon appears. Press any key to begin the game.

The program retrieves a record for round one then sets up the screen. A menu appears allowing you to solve the puzzle, buy a vowel or spin. Select 1 to solve the puzzle (if you guess correctly, your score is multiplied by three and the game proceeds to the next round or end routine). Select 2 to buy a vowel ($25). Select 3 to spin.

If you choose to spin, you are asked to enter a consonant. If the letter selected is in the puzzle, your score is increased

Arron Branigan is a technical sergeant in the U.S. Air Force and is pursuing a bachelor's degree in computer applications at Arkansas State University. He enjoys programming his computer and singing country and western music.

The Educational Answers

SCIENCE GAME
32K EB - disk only/$29 95
Over 600 questions in 9 categories Makes learning science facts fun. Game format, 1 or 2 players, teams. Grade 8 and up.

STREET MAP GAME
32K - $19.95 tape/$24.95 disk
Hi-res. screen and graphics portray a typical section of a street map. This one shows people's homes, the school, the park, etc. Questions on how to get from one place to another are asked and the footsteps are shown

CHEMISTRY TUTOR
32K - disk only - $29 95
A hi-res. 4 part program that drills high school students in Elements, Symbols, Naming Compounds, Common Ions, and Balancing Equations. Correct answer given after 2 incorrect responses. A valuable tool for studying chemistry.

5 LIGHTPEN PROGRAMS
32K EB - $44.95
Five menu driven educational programs designed for children in grade 1 and 2, and special educational students. Basic addition, basic multiplication, shape series matching, number series matching and word rhyming are included. All on a HI-RES screen, with graphics. User need only to use the light pen to operate the programs **(LIGHT PEN INCLUDED)**

VERBAL MATH PROBLEMS

PIZZA GAME
32K EB - tape/$19.95
Learn to locate coordinates on a grid. HI-RES text and graphics.

AREA & PERIMETER
32K EB - tape/$19.95
Triangles, rectangles, and circles are covered in this HI-RES text and graphics program.

SALES & BARGAINS
32K EB - tape/$19.95
Learn to find the discounted price. HI-RES text and beautiful graphics.

DISTANCE PROBLEMS
32K EB - tape/$19.95
Moving graphics and text combines on a HI-RES screen. Rate x Time = Distance in all its forms.

STREET MAP GAME **32K E.B.**
$19 95 Tape **$24.95 Disk**
Hi - res screen and graphics portray a typica section of a street map. This one shows people's homes, the schoo , the park, the post office, etc. Questions are asked on how to get from one place to another and the foo tsteps are shown after response. A fun way to improve map ski ls.

OPENING A BANK ACCOUNT
32K - Disk Only - $24.95
A set of programs designed to introduce and provide practice in the skills of filing out bank applications, deposit and withdrawal slips, and computing bank account balances. Loaded with graphic presentations. Grades 3-6

$$$

DOLLARS & SENSE
16K-Ext. - $14.95 tape/$19.95 disk
Learn to make purchases. Graphic displays of items kids love. Player buys items using dollars and coins to practice using money correctly. Solutions given.

McCOCO'S MENU
16K-Ext. - $19.95 tape/$24.95 disk
America's favorite pastime-going out to eat. Learn to buy and add up your purchases from a typical fast food restaurant menu. Gain skill in using money. Different prices each time.

COCO WHEEL OF FORTUNE
32K - $19.95 tape/$24.95 disk
Hi-res. graphics and screen in this version of the popular TV show. 1-6 players. Spin the wheel for points and guess a letter to solve one of the 200 puzzles. Have fun while strengthening LA skills.

COLORGRADE
32K - disk only - $29.95
An easy to use classroom grading program. Keeps grades for up to 6 classes of up to 40 students per class. Many options including weighted averages and hard copy to printer.

Computer Island

can also be used to set up custom reports, print mailing labels, etc. The limits seem only to be in the user's ability to program in BASIC. Action templates could even be used on data files created by other programs if the user has sufficient experience.

One of the other major differences between *CoCo Base I* and other database managers is *CoCo Base I*'s ability to create and execute batch files. These are created using Schedule and executed using Jobs. Schedule creates a job file of Action templates. Schedule allows the user to specify the templates to be used as well as the order and type of execution of these templates. For example, a report could be produced by using one template to print a header, the next to find, format and print a list of selected records, and a third to print a footer and totals. Templates can be executed once, once for each record in order, or once for each record in indexed order. Since templates can contain many lines of BASIC code, each one can be quite complex.

Two final options are of interest to those who need to construct new databases from old ones, those who want to create very complex databases, or those like me who invariably enter large amounts of data into a database before they realize that the data structure is wrong. Transfer creates a new database which includes data from an existing database file. Additional fields can easily be included in the new database format, so additional fields can be added to a database. This feature alone could save countless hours of aggravation and programming. I always seem to need just one more field in any database I create after it is in use.

Update gives *CoCo Base I* its claim to being a relational database manager. Update does not access several different related data files at once. Instead it moves selected fields from one data file to another. This requires that each of the files has a field common to the other. Update places fields in the correct record in the receiving database by looking at this "related field." Of course only one related field is used.

This ability to combine data from several data files is useful for a number of things. To me, the most important use is in keeping individual files short and combining information from different files later when the combined information is needed.

If you get the feeling that I am impressed with *CoCo Base I* you are correct; it fits my needs quite well. However, it has a few problems. First is error handling. There are instructions in the manual that tell you what to type in case of an error. This works and is adequate, but it is inelegant. There should be some way of trapping errors before they dump the user back to the OK prompt. Another annoyance was with *CoCo Base I*'s inability to allow a record to be removed from a database. There are many times when a user would like to delete a record from a file. *CoCo Base I* does not allow this in a simple way.

The last complaint has to do with nearly every database management system I have used. I have to keep telling the program the name of the files I am working on. I realize that this is the price one pays for having the ability to store different versions of each file, index, etc., but I still find it a nuisance. Unfortunately, if this "problem" is fixed it would have to be at the expense of flexibility. Given the choice, I'll vote for flexibility.

The last comment I have is not so much a complaint as a suggestion to potential *CoCo Base I* users. Learn BASIC Although *CoCo Base I* can be used by any non-programmer, the power of the program is best released by someone familiar with BASIC. You could learn BASIC as you go, but previous knowledge is extremely helpful. At first the program may seem weak or difficult to use, but after some practice I find that it can do a great many powerful and useful things.

(JTJ Enterprises, P.O. Box 110841, Nashville, TN 37211, disk $49.95 plus $2 S/H)

One-Liner Contest Winner . . .

This little one-liner produces some interesting graphics designs. It is almost kaleidoscopic.

Powerful *CoCo Base I* is Full of Surprises

By D. McGarry

CoCo Base I is the latest offering from JTJ Enterprises of Nashville, Tennessee. I mention this because there is a strong family resemblance between *CoCo Base I* and *CoCo Solver*, JTJ's other product. Several neat programming tricks were included in both programs and both use the same machine language data entry editor. *CoCo Base I* stands on its own as a good, solid database program. If, however, you own and use *CoCo Solver* you will be able to extract maximum performance and flexibility from *CoCo Base I* with less effort than someone with no prior experience. Several features help *CoCo Base I* to stand out from the crowd of other database management systems. First, *CoCo Base I* is a relational database manager. This means that it can access more than one data file by referencing a field common to all files. Second, through the use of Jobs and Schedule options it allows the processing of batch files. Third, the Action option allows for the inclusion of BASIC statements to manipulate data.

CoCo Base I comes on an unprotected disk which includes 10 program files and several sample files. All work is started by typing RUN "MENJ" at the OK prompt. Menu options are Create, Put, Index, Action, Schedule, Jobs, Transfer and Update.

The first step in creating a database is to use the Create option to create a structure file of the data fields. Each field is given a two-character name, description, length and type. Field types can be either character or numeric. The structure file can be edited at any time and can extend over several screen pages allowing for large or complex records.

Once the structure file is saved, the Put option is used to add, edit, find and print records. Put uses the structure file defined with Create to show records and for data entry. Put can use an existing file or create a new one as records are added. This allows the creation of several database files which all use the same data format.

The next option is Index which does exactly what the name implies. Index files can be saved with their own names, so several index files can exist for the same data file.

Up to this point, *CoCo Base I* looks and acts similar to most database management systems. The additional options make *CoCo Base I* different from any other database manager I have used.

The most unusual and powerful uses of *CoCo Base I* start with the Action option. Action allows the creation of template files which can act on the database. Templates are sets of BASIC language statements that are added to the Action program as it runs. Action statements can be used to do nearly anything to the data file as far as I can tell. I used Action templates to average a set of grades for one of my physics classes. The grades each had a weighting factor. Some of the grades were numeric and some alphabetic. Even though it took some experimentation to get the template correct, Action allowed me to do this job more quickly than any other method I have used. Action

CoCo Keyboard Beats the Chiclets

Imagine . . . could someone actually like the "chiclet" keyboard on their 'F' board CoCo? I did. I was accustomed to using that keyboard and I can hunt and peck with the best of them. Well, all that changed when I received my review assignment for the replacement keyboard offered by Spectrum Projects.

I received the keyboard and immediately installed it in my Color Computer. The documentation was brief and appeared incomplete. Nevertheless, replacing a keyboard is perhaps one of the easiest upgrades to perform on a CoCo. To make it even easier, the keyboard is the same as the 26-3016 keyboard retailing for $24.95 at Radio Shack (less installation). This means there is no cutting or soldering involved at all.

Simply open the case (keep in mind this voids your warranty), unplug the old keyboard, plug in the new one and close the case. That's all there is to it. After that, you have a keyboard with full-size keys and a better overall feel.

I found it very easy to get used to the new keyboard. Particularly since the key placement is the same as on my old one, but the new keyboard feels better and typing goes a lot smoother. Even touch-typists should like this keyboard more than some others on the market.

The keyboard is designed to fit into any revision of Color Computer from the old 'F' board to the present CoCos. The cable is the transparent, super-thin mylar conductor type. If you have a version earlier than the 'F' board, Spectrum also sells an adapter that allows you to easily install the keyboard in your computer as well. Keep in mind, if you have one of the newer CoCo 2s this is the same keyboard you already have.

I highly recommend this keyboard for anyone and everyone. Its low cost as well as ease of installation make it one of the best upgrade buys on the CoCo market today.

(Spectrum Projects, Inc., P.O. Box 21272, 93-15 86th Drive, Woodhaven, NY 11421, keyboard $14.95, adapter $9.95, plus $3 S/H)

Hardware Review

No Frills U-Buff is an Excellent Value

As much as we hate to admit it, the present-day world puts much emphasis on time. Hurry this and hurry that; it is as if we were in a race to the finish! Well, the U-Buff printer buffer from Digital Devices fits in nicely.

I have given this little gem a thorough run for its money. Over the last month and a half, I have sent it files from Delphi, files from my word processor, data from my BASIC programs and graphics. It hasn't let me down yet. It has always printed each character reliably.

For those who don't know, a printer buffer is nothing more than a go-between. It goes between your computer and printer. A printer is limited in speed. The print head can only move so fast across the page. However, a computer can send data much faster. So the buffer allows the computer to finish sending its data more quickly. Therefore, you don't have to wait all day for the printer to finish before going ahead with your work.

As an example, when I told my system to print a 40.5K file, the prompt was back on the screen in 83.5 seconds. I was already involved in my favorite game when my printer finished printing out the 30 double-spaced pages 15 minutes and 53 seconds later

The U-Buff is available in two configurations: 16K memory and 64K memory. A nice added feature is the average user can upgrade the unit from 16K to 64K by himself. The manual gives information on what chips to buy and how to install them properly. The only drawback is that the one-year warranty only applies to the configuration purchased from Digital Devices. Still, I believe this is very reasonable.

The buffer is designed to accept input from any computer having a Centronics interface. Since my serial/parallel converter terminates in a Centronics plug, I had no problems. The unit also terminates in a Centronics plug for the printer's parallel port.

The U-Buff comes with a 14-page, easy to read pamphlet. The instructions cover installation, testing, troubleshooting, upgrades and a whole slew of technical information plus a glossary.

Despite its usefulness, keep in mind a printer buffer isn't for everybody. But anyone with a business or who does a lot of printing will surely welcome anything to help them out.

The U-Buff is an excellent, no-frills printer buffer. For the reasonable price it is a good work horse with a good deal of backing from the manufacturer. This one gets four stars.

(Digital Devices Corporation, 430 Tenth St., Suite N205, Atlanta, GA 30318, 16K $119.95, 64K $149.95)

— Cray Augsburg

formatter we published recently, or the *TSWord* formatter. The *DeskMate* editor is very easy to use and a nice way to enter text. Add the dot commands required by *TSWord* or other formatter and you can print it in any way you like

Many people also like *TSEdit*. It is based on the UNIX VI text editor and does an excellent job. The only reason I haven't bothered to use it is the fact that my fingers already have the *DynaStar* diamond memorized. I would hate to have to learn to touch type all over again. Yet, a friend of mine really likes *TSEdit*. He learned to touch type on *TSEdit* first. He enjoys working with the *TSWord* formatter but he has discovered one problem. I have confirmed the problem but still haven't figured out a solution. If you come up with one, please let me know.

Since memory is limited, divide the writing into shorter files and use *TSWord*'s .NX command. That's fine. In fact, it's a good way to work, even if you don't need to. Unfortunately however, *TSWord* breaks to a new page every time it hits an .NX command. What we need is a way to disable this page break so we can print continuously one page after the other. Here's an example you can use to print three individual files at one time.

```
.nx part_one
.nx part_two
.nx part_three
```

Many people on the CoCo SIG forum seem to believe *DeskMate* files are not compatible with other OS-9 programs. Not so. The secret can be uncovered in the documentation for the terminal program in *DeskMate*. The *DeskMate* editor automatically adds an extension, .DOC, to the end of the filename. Therefore, if you save a file named "Column" it will actually be named "Column.DOC." Save a *DeskMate* file then exit and run the *dir* utility. Then, go ahead and list or dump the file using the complete filename. It worked, didn't it?

The reverse is also true and you could build a file and then edit it with the *DeskMate* editor if you give the file you are building a .DOC extension. For example:

```
OS9: build Example.DOC <ENTER>
```

While we're still talking about *DeskMate*, we should clear up another point. The *DeskMate* terminal program requires you to use the Deluxe RS-232 Pak. You cannot use the /T1 port on the back of the CoCo. Again, bit banging just doesn't work in a multi-tasking environment. If it did, the *DeskMate* programmers would have provided the option to change it. They clearly state that you need the hardware ACIA in the *DeskMate* manual.

Good News for Graphics Programmers

Eric at ColorVenture Software, P.O. Box 1729, Huntington Station, NY 11746 needs a good graphics programmer for an exciting CoCo project. He has been negotiating with Broderbound Software about porting *The Print Shop*, a best-selling program on the Apple and Commodore to the Color Computer. He wants to market it to Tandy, so it must be done in OS-9. Here's your chance! Give him a call at 516-271-8456.

The CoCo/IBM Connection

Many people use an IBM PC or clone at work these days. That's the bad news. The good news is that we can now work at home on our Color Computers, save our efforts on an IBM-compatible disk and carry it to work. In fact you can often get a lot more work done when you get away from the constant interruptions of the workplace.

We owe our new freedom to James Hornsby, who has developed a set of utilities to let you read or write standard Radio Shack DOS single-sided disks as well as standard IBM PC single-sided disks. They use Dan Johnson's Color Computer OS-9 SDisk driver and can also read and rename files on double-sided IBM PC disks. Since they run in OS-9 they also let you send OS-9 files to either Disk BASIC and IBM PC disks, or vice versa. They are most useful for transferring standard ASCII data files. Additionally, if you save a BASIC program in ASCII and transfer the file to the other computer, it should load without a problem.

Sequential ASCII text files from Disk BASIC load into IBM PC editors without a hitch, although you have to add line feeds after each carriage return when using some editors. When you move ASCII text files from an IBM to the Color Computer, you must strip off the extra linefeeds. Hornsby gives you two utilities, *addlf* and *striplf*, to take care of these jobs.

All of Hornsby's utilities use OS-9's standard input and output path. This means their output can be redirected to a file or used in a pipeline. If you avoid using pipes, you can even run these transfer utilities on a single-drive system. A typical single-drive command looks like this:

```
OS9: RSread -s #1ØK /dØ/filename.dat
  >/dØ/documents/myfile
```

Here is a typical command line that uses a pipe.

```
OS9: RSread /d1/filename.ext ! addlf
```

When you run this command, RSread reads data from a standard Color Computer disk and writes it to OS-9's standard output path. But the pipe, noted by the exclamation mark (!) diverts this output to the input of the next program in the pipeline, *addlf*. The latter command adds a linefeed after every carriage return and sends its output to OS-9's standard output path. Since there are no more pipes and the standard output has not been redirected, the output of *addlf* appears on the terminal. Programs that work like *addlf* and *striplf* are called filters.

To copy a file to an IBM disk use a command line similar to this:

```
OS9: PCWrite /D1/letter.txt
  </dØ/letters/myletter
```

Notice that PCWrite gets its input from a file named myletter, in a directory named letters on a disk mounted in Drive /d0. It does that because the standard input path it reads has been redirected to receive information from the file. It stores the file letter in an IBM file named letter.txt on a disk mounted in Drive /d1.

In addition to the standard read and write operations, you can also format IBM disks and delete or rename IBM files with additional utilities in the package. Be careful with IBM filenames containing the characters special to the OS-9 Shell — |, # and &. You can only access files stored in the root directory of an IBM disk that uses hierarchical directories.

This Month's Listings

Gregory A. Law, who has contributed several OS-9 tips in the past, has contributed his version of Dennis Derringer's *Pager.B09*. The program first appeared in MOTD several months ago. Law modified the program to make it print 66 lines per page, rather than 67 and taught it to recognize a second procedure in the source code. When the new *Pager.B09* encounters an additional procedure, it skips to the next page and changes the header on the page to the name of the new procedure. The page numbering remains intact. He also corrected the way the program handles line numbers. Additionally, it prompts for an output device so you can use any parallel printer or even /TERM. Law challenges you to come up with a way to handle a BASIC09 program line in the form of:

```
IF variable=data THEN
  variable=null \ ENDIF
```

Presently, *Pager.B09* treats the rest of the program following this line as if it were still in the IF loop. In other words, *Pager* only recognizes control structure keywords when they are at the beginning of a line.

And here's another tip. Why not write this program so that it receives input from standard input and sends output to standard output. If you do this, you could use it as a filter. To make *Pager.B09* read from the standard input path, take out this line and the conditional code following it:

```
INPUT "File to list: "filename
```

To make *Pager B09* send output to the standard output path, you must make similar changes. Take out the prompt for the output device and the code that uses it. Then, remove the following four lines:

```
OPEN #path, filename:READ
OPEN #printer,output:WRITE
CLOSE #path
CLOSE #printer
```

Then, early in the program add the following two lines:

```
path:=Ø
printer:=1
```

After you do this, the program gets input from the standard input path when it encounters the line, "READ #path, line". Likewise, it sends output to the standard output path when it encounters any line containing "print #printer".

Run *Pager.B09* with OS-9 command lines like this:

```
OS9: basic09 Pager
 <any_BASIC09_file >/P
OS9: basic09 Pager
 <more BASIC09_Source >a_spooler_file
OS9: basic09 Pager
 <any_BASIC09_Source
```

The first command line sends its output to the printer. The second line saves the output in a file on disk which you can later print, and the last line sends the output to the Color Computer screen.

While you are typing *Pager B09* into the CoCo you will find several program lines longer than the length of the screen. To get around this problem, type a linefeed character and continue to type the program line Remember, do not press the ENTER or RETURN key after you press the linefeed key — just keep typing. To generate a linefeed character on the Color Computer, hold down the CLEAR key and press the 'J' key. BASIC09 will let you enter the long series of IF . . . OR . . . OR . . . THEN statements in *Pager.B09* if you do this. This series appears twice in the listing and both times the three lines of code in the listing should be entered as one line of code.

A New *line.c*

Law also modified the standard *line.c* program that comes with the Microware C compiler from Tandy. The program now paginates the listings at 66 lines per page and includes a header that prints the filename and pager number. He also gives you the ability to add the string "/*page*/" to your own code. When the *line.c* sees this string it automatically skips to the top of the next page. This is a handy feature since it allows a way to add a simple comment to programs to keep a routine from being listed on two pages.

Our final listing this month comes from Matthew Belmonte of Alexandria, Virginia. The listing *stat.a* is written in the RMA assembler format. RMA is the assembler called C.Asm in Microware C. It just might come in handy if you are trying to port C programs from UNIX over to OS-9. The short C program, *example.c*, shows how to use "stat( )" from within your own C programs. To link stat( ) with *example.c*, use the following command line.

```
c.link /d1/lib/cstart.r
 example.r stat.r -0=/d1/
example -l=/d1/lib/clib.l
```

That's it for August! But, never fear, next month should be just as much fun as we try to come up with a way to organize your disks. Till then, keep on hacking! □

ARE YOU LOOKING FOR A HI-RES GRAPHIC SCREEN PRINT DUMP?

HARDCOPY - Hardcopy is more than just a screen print dump, compare these features with any ther graphic dump program on the market!

- Full GRAPHICOM/GRAPHICOM PART II compatibility! Loads STANDARD 6K images, GRAPHICOM pictures, and COCO MAX pictures too!
- BLACK & WHITE or GREY SCALE printing. In GREY SCALE printing, colors are printed as user definable patterns. Supports hi-res in all 4 GRAPHICOM display modes!
- **1x, 2x, 3x PRINTOUTS** - Three menu options are reserved for the most frequently used printout sizes, 1x (quarter page), 2x (half page), and 3x (full page).
- **GRAPHIC LABELS** - The label printing option allows the user to create custom mailing or disk labels with professional looking results.
- **GREETING CARDS** - The greeting card option allows the user to custom design greeting cards using both text and graphics.
- **GIANT POSTERS** - The poster option provides the user with a means of reproducing a hi-res graphic to a multi-sheet poster.
- **SPECIAL EFFECTS** - The special effects option allows the user to directly control the printing directives, ROTATION, X/Y SIZE, X/Y FLIP, X/Y GRID, X/Y FILL, TAB, WINDOW, POS/NEG IMAGE, and more!
- **USER CALL** - Have an application that **HARDCOPY** doesn't quite match? **HARDCOPY** routines can be added to EXTENDED BASIC through the USR command!

HARDCOPY* requires a 64K Color Computer or Color Computer II, and at least one disk drive. It supports 1 to 4 disk drives, keyboard or joystick input. Please specify **printer** and **cat. number** when ordering.

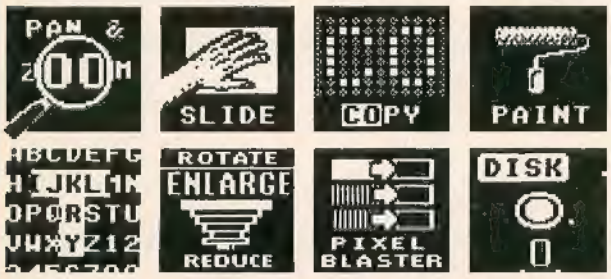
ALL RIGHTS RESERVED

HARDCOPY PRINT UTILITY $29.95

GRAPHICOM PART II

DISTRIBUTED BY COMPUTIZE INC.



©1984 WHITESMITH V:1.0
ALL RIGHTS RESERVED

GRAPHICOM PART II $24.95

YOU COULD SPEND $100.00 OR MORE TO UPGRADE YOUR GRAPHICS SYSTEM, JUST BUY...

Eclipse (Zoom)	$19.95/Moreton Bay		
Super Paint (Paint)	$19.95/Michtron	Text Master (Hi-Res Text)	$29.95/Data Man
Shrinx (Reducer)	$21.95/Grafx	G.C.U. (Disk Utilities)	$19.95 Computize

OR YOU COULD SPEND $24.95 FOR GRAPHICOM PART II AND GET:

a video processing package that provides many functions that are missing in Graphicom. Here are just a few of the features provided by Graphicom Part II:

ENLARGE/REDUCE/ROTATE
Enlarge or reduce any portion of a graphic screen, just like a photographic enlarger! Rotate by any degree or fraction of a degree around any point on the screen.

PAINT
Paint or "fill-in" any irregular area on the screen! More than 50 different colored patterns available. Additional paint patterns may be user-defined.

PAN & ZOOM
"Zoom in" x2, x4, or x8 on any portion of the screen to do fine pixel work. Allows editing of Graphicom character sets with ease!

TYPESETTER & FONT EDITOR
Add text in 16 different sizes, also supports user definable foreground & background colors. Design & Edit characters for use in the typesetter.

PIXEL BLASTER
Allows the user to easily substitute or remove colors. Widen lines, swap BLUE & RED without effecting BLACK & WHITE, etc.

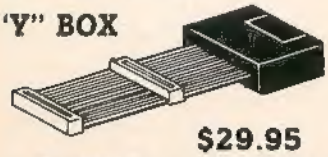
GRAPHICOM PART II DOES NOT REQUIRE GRAPHICOM TO RUN!

Graphicom Part II requires a 64K extended disk basic system, and supports 1 to 4 disk drives, keyboard or joystick (analog or switch type) input. It will load and save both **Standard BIN** files and **Graphicom** screens. All functions support color or Hi-Res operation, as well as the 4 screen display modes.

NEW LOW PRICE!
GRAPHICOM DIGITIZER $159.00

Input directly into Graphicom for easy enhancements, manipulation, stamping, and storage. Accepts composite video signal in (1.0v p-p) from video camera, VCR, video disc player, another computer, or other compatible video sources. View "off air" or "VCR" digitized video at close to real-time. "Snapshot" video frames to the digitizer's internal memory. No slow, data serial manipulation.
Use with your multi-pak, "Y" box, or a "Y" cable ("Y" cable available at $19.95) Video is input via a "BNC" connector.
External controls for HORIZONTAL POSITION, VERTICAL POSITION, HORIZONTAL WIDTH, BRIGHTNESS, and CONTRAST (FUZZ) settings.
Don't be fooled by imitations...this is the GRAPHICOM VIDEO DIGITIZER . . . the **only** digitizer that "DIRECTLY" inputs into Graphicom
REQUIRES 64K COCO, 1 DISK DRIVE, AND 2 ANALOG JOYSTICKS. FREE GRAPHICOM PROGRAM, PICTURE DISK, AND GRAPHICOM UTILITY SUPPLIED WITH PURCHASE OF VIDEO DIGITIZER (A $50 VALUE).

"Y" BOX



$29.95

GRAPHICOM $24.95

Catalog No. 111GD

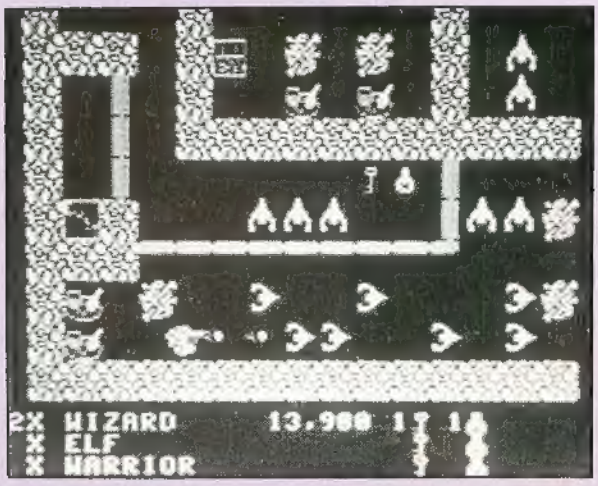
DIECOM PRODUCTS

GANTELET

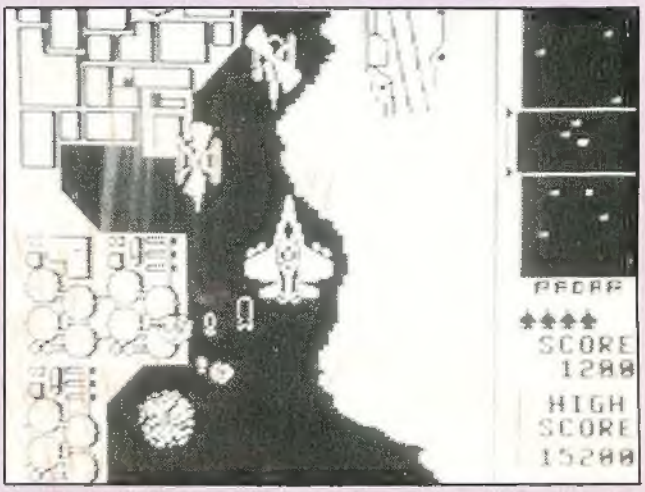


One, two or even three people can play Gantelet at the same time. You and your friends travel through the many levels in search of an exit to the next level. Avoid the Ghosts and other creatures that are out to stop you in your quest. Collect keys to open doors, treasures and magic potions to aid you in your battle. Watch out for hidden traps as you frantically search for the exit to the next level.

64 k required
tape or disk

$28.95 U.S.
$38.95 Can.

Mission: F-16 ASSAULT

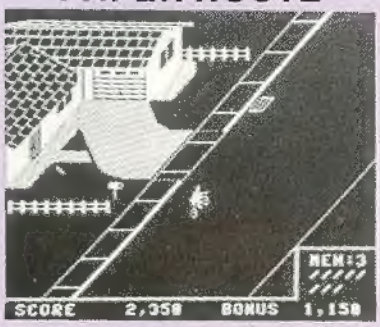


Fly your plane over land and water while avoiding enemy missiles, planes and helicopters attacking from the top and bottom of the screen. Use your radar to track objects as they approach the main screen. Bomb oil refineries, airports and destroy planes before they can take off from the airports. Watch out for missiles fired from hidden missile silos on the ground. Dozens of screens of detailed terrain plus increasing difficulty make this a great game for everyone.

64 k and joystick required
tape or disk

$28.95 U.S.
$38.95 Can.

PAPER ROUTE



As a paper boy, you ride your bike along your route delivering papers to your customers. Break customers' windows or damage their property and they will cancel their subscriptions! Earn bonus points by damaging non-subscribers' property. Avoid pedestrians, cars, and maybe even a mad dog in your attempt to deliver all of your papers! Detailed graphics and lots of surprises make this game a real challenge for everyone.

64 k
joystick required
tape or disk

$28.95 U.S.
$38.95 Can.

MARBLE MAZE

Move your marble around the mazes in your search for the finish line! Avoid marble eaters, acid puddles and other creatures that inhabit the mazes. Eight different levels and great graphics make this game a must for your collection.

joystick required

KNOCK OUT

Fight against five different boxers in this great boxing game! At first the boxers are easy to knock out, but beware, it gets harder as you move on. The boxers are out to stop you in your quest to become champion of the world. Outstanding graphics make this a must for your collection!

KARATE

Challenge the computer, or a friend to a Karate match! Use various Karate punches and kicks to knock your opponent down and earn points to win the match. When challenging the computer, your opponent's Karate skills increase as you win matches. This game is a challenge for even the expert game player.

HEAT UP YOUR COCO!

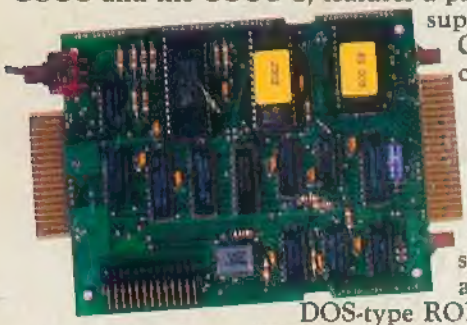
New HARD DRIVES

Besides the obvious advantage of increased disk access speeds and a vast amount of storage, our COCO hard drives boast many innovative features. For instance, you may boot OS/9 directly from JDOS - no intermediate boot floppy is required. Our software can run with virtually any winchester with a ST412 type interface. Our drives have capacities of 5, 10, or 20 MBytes (formatted), and may be either partitioned into up to 7 logical units or left as one large logical unit. Our COCO hard drive systems are complete with case, power supply, cables, OS/9 drivers, and instructions. Prerequisite: OS/9, JFD-CP controller.

5¼" 5 MByte full size	$495
5¼" 10 MByte ½ size	$650
3½" 20 MByte (shown above)	$795

JFD-CP DISK CONTROLLER

Our new JFD-CP, compatible with both the original COCO and the COCO 2, features a parallel port to support a Centronics compatible printer or our hard drive, and an external ROM switch, which allows you to select JDOS or an optional RS DOS-type ROM. It comes in a case and includes JDOS 1.2 and manual. JDOS implements all RS DOS commands, plus many more, including auto line numbering, error trapping, baud rate selection, OS/9* boot from floppy or hard drive, and Memory Minder**, our disk drive analysis program (Precision Alignment Disk not included).



JFD-CP Disk Controller with JDOS $139

COCO-CLASSIC

Our old JFD-COCO controller remains a strong seller. Some people just like old "classics" best! So we have brought it back at the lowest price ever!

JFD-COCO Disk Controller with JDOS $99

New TERMS

One-year warranty on parts & labor; 30-day money back guarantee (except shipping) if not totally satisfied. Items must be returned in like new condition.

Free shipping via UPS in continental United States for payment by VISA, MasterCard, or cashiers check. COD requires 10% prepayment by bank card plus 3% shipping. Blue Label and foreign shipping extra.

DRIVE SYSTEMS

Upgrade your Color Computer by adding our new JFD-CP disk controller, supercharged with JDOS 1.2 operating system, and a top quality drive with case and power supply. Comes complete with cable and JDOS manual.

Drive 0 System with one single side drive	$279
Drive 0 System with one double side drive	$349
Drive 0,1 System with two single side drives	$389
Drive 0,1 System with two double side drives	$489

MEMORY MINDER**

Memory Minder is a disk drive test program now included in JDOS. Used with a Precision Alignment Disk, Memory Minder allows you to check your drives for speed, alignment, sensitivity, hysteresis, and more! You can actually align or adjust the drives while viewing the graphics on the screen. No special equipment needed!

PRECISION ALIGNMENT DISKS (From Dysan)

PAD-40X1: Tests single side disk drives	$26
PAD-40X2: Tests double/single disk drives	$33

Memory Minder is available on diskette for those who don't own a JFD-CP controller with JDOS. Includes Precision Alignment disk.

Memory Minder: single side package	$59
Memory Minder: single/double side package	$75

*OS/9 is a registered trademark of Microware, Inc.
**Memory Minder is a registered trademard of J&M Systems, Ltd.
